Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2014.

Introduction

This Specialized Disclosure Report on Form SD of Chicago Bridge & Iron Company N.V. (the “Company” or “CB&I”) is filed pursuant to Rule 13p-1 (the “Rule”) promulgated under the Securities Exchange Act of 1934 for the reporting period January 1, 2014 to December 31, 2014. A copy of the Company’s Conflict Minerals Report (the “Report”) is included as Exhibit 1.01 to this Form SD and is available on the Company’s public website at www.cbi.com.

The Rule requires disclosure of certain information when a company manufactures or contracts to manufacture products that contain the minerals specified in the Rule, if the minerals are necessary to the functionality or production of those products. These minerals are gold, columbite-tantalite (coltan), cassiterite and wolframite, including their derivatives, tantalum, tin and tungsten (collectively referred to in this Report as the “Conflict Minerals”). If Conflict Minerals are necessary to the production or functionality of a company’s products, the company must conduct in good faith a reasonable country of origin inquiry designed to determine whether any of such Conflict Minerals originated in the Democratic Republic of the Congo, Angola, Burundi, the Republic of the Congo, the Central African Republic, Rwanda, Tanzania, South Sudan, Uganda, or Zambia (the “Covered Countries”). If, based on its reasonable country of origin inquiry, the company knows or has reason to believe that its Conflict Minerals originated in the Covered Countries (and did not come solely from recycled or scrap sources), the company must perform due diligence to determine whether the Conflict Minerals necessary to the production or functionality of its products directly or indirectly financed or benefited armed groups in the Covered Countries.

Company Overview

Founded in 1889, CB&I, a Netherlands company, provides a wide range of services, including conceptual design, technology, engineering, procurement, fabrication, modularization, construction, commissioning, maintenance, program management and environmental services to customers in the energy infrastructure market throughout the world, and is a provider of diversified government services. CB&I’s stock trades on the New York Stock Exchange under the ticker symbol “CBI.”

CB&I is organized into four operating groups. During the three months ended March 31, 2015, the Company realigned its four operating groups to reflect the present management oversight of its operations. The maintenance business that was previously reported within the Engineering & Construction operating group (formerly Engineering, Construction & Maintenance) is now reported within the Capital Services operating group (formerly Environmental Solutions), and the engineered products business that was previously reported within the Technology operating group is now reported within the Fabrication Services operating group. The realignment of operating groups had no impact on the due diligence process performed by the Company for purposes of this report, nor did it change the substance of the calendar year 2014 findings. The operating groups below and the report on Exhibit 1.01 are described within the format of the 2015 realigned operating groups.

The following provides a description of the four operating groups:

Engineering & Construction - Engineering and Construction provides engineering, procurement, and construction (“EPC”) services for major energy infrastructure facilities.

Fabrication Services - Fabrication Services provides fabrication of piping systems, process and nuclear modules; fabrication and erection of steel plate structures; manufacturing and distribution of pipe and fittings; and engineered products (including engineering, procurement and fabrication for heat transfer equipment and gas processing, hydrogen and sulfur recovery technologies) for the oil and gas, petrochemicals, water and wastewater, mining, mineral processing and power generation industries.

Technology - Technology provides licensed process technologies and catalysts for use in petrochemical facilities and oil refineries, and offers process planning and project development services and a comprehensive program of aftermarket support. Technology also has a 50% owned unconsolidated CLG joint venture that provides licensed technologies, engineering services and catalyst, primarily for the refining industry.

Capital Services - Capital Services provides comprehensive maintenance services, environmental engineering and remediation, infrastructure EPC services, program management, and disaster response and recovery for private sector

customers and governments.

SECTION 1 - CONFLICT MINERALS DISCLOSURE

Item 1.01 Conflict Minerals Disclosure and Report

The Company has conducted an analysis of its products and found that certain CB&I manufactured products contain Conflict Minerals. The Company believes these products are subject to the reporting requirements of the Rule. The Company has conducted a good faith reasonable country of origin inquiry regarding Conflict Minerals necessary to the production or functionality of its products. This good faith reasonable country of origin inquiry was designed to determine whether any of the Conflict Minerals originated in the Covered Countries and whether any of the Conflict Minerals were from recycled or scrap sources. The Company also exercised due diligence on the source and chain of custody of the Conflict Minerals. The Company's due diligence measures have been designed to conform to the framework in the Organization for Economic Cooperation and Development Due Diligence Guidance for Responsible Supply Chain of Minerals from Conflict-Affected and High Risk Areas, including the related supplements on gold, tin, tantalum and tungsten.

Based on the information obtained pursuant to the due diligence process, the Company believes that many of the Conflict Minerals contained in its products did not originate in a Covered Country. However, the Company does not have sufficient information with respect to all of its products that contain Conflict Minerals to determine the country of origin of all such Conflict Minerals. Accordingly, as required by the Rule, the Company has prepared a Conflict Minerals Report, which is filed as an Exhibit hereto. That Report, and this Specialized Disclosure Report, are available on the Company's public website at www.cbi.com.

Item 1.02 Exhibit

The Conflict Minerals Report required by Item 1.01 is filed as Exhibit 1.01 to this Form SD.

SECTION 2 - EXHIBITS

Item 2.01 Exhibits

Exhibit 1.01 Conflict Minerals Report required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.
