News Release dated April 20, 2006

Anglo Swiss Resources Updates Work Programs on the Kenville Gold Mine, a Multi Mineral Exploration Project for Porphyry Mineralization of Gold, Copper, Silver & Molybdenum

Anglo Swiss Resources Inc. (TSX.V-ASW / OTCBB ASWRF) is pleased to report on the Kenville Mine, located west of Nelson, South-eastern British Columbia. The Kenville Mine is a historic producer of gold, 65,000 ounces of gold from 181,200 tonnes of ore and has not been in production since 1954.

B.C. government MINFILE Number: 082FSW086 1985 reports **294,800 tonnes combined gold at 16.73 g/t** (Indicated and Inferred Resources above the 2570 main mine adit level. These are Historical Reserves/Resources reported prior to National Instrument 43-101) ..

With current market prices for precious and base metals hitting 25 year highs, the economics of the Kenville property warrant serious consideration.

The Kenville Mine property has three main areas of interest to potentially host mineral deposits:

* The Old Kenville Mine workings, the mineralization contained within, and immediately adjacent to the old workings need much collation and interpretation before proceeding with further exploration although work performed by previous operators has demonstrated that potential exists for quartz gold vein type mineralization to be outlined.

* The Eagle Vein has been intercepted by two drill holes (TK95-04, 05). As this vein contains high-grade gold and silver values, its surface location and strike direction are of considerable importance. Further excavator trenching and diamond drilling will be required before considering an underground mining approach.

* The Porphyry target is based on compelling evidence, a strong case is presented for further investigation of the presence of a copper-molybdenum-silver-gold porphyry deposit, on the west side of Eagle Creek. The presence of such a deposit is also supported by past rock sampling results, geophysical surveys and diamond drilling results.

Exploration on the Kenville Mine property was initiated on August 16, 2005 thru November 10, 2005 on the Kenville Mine property under the terms of the Option Joint Venture Agreement OJVA (see Release dated October 28, 2003). Work consisted mainly on the west side of Eagle Creek and consisted of extensive compilation of decades of data by numerous operators, GPS mapping of the property, geochemical soil sampling and excavator trenching. The Company has received approval from the Ministry of Energy and Mines for the OJVA's 2006 work program, exploration is expected to re-commence in late April or May.

Management has received and is reviewing the Assessment Report on the Kenville Mine Property, Physical and Geochemical dated March 5, 2006, by Thomson Geological Consulting.

For the first time in decades of operating as a gold mine and numerous exploration programs on the Kenville Mine property, all the data available is being correlated and compiled utilizing state of the art technologies and computer modeling. The current exploration methodology is being correlated to the extensive compilation of operations and exploration data undertaken by numerous operators over many years.

On behalf of the Board of Directors of

Anglo Swiss Resources Inc.,

(s) Len Danard

THE COMPANY RELIES ON LITIGATION PROTECTION FOR FORWARD LOOKING STATEMENTS.

END.
