*Security Valuation:* Portfolio securities that are actively traded in the over-the-counter market, including listed securities for which the primary market is believed to be over-the-counter, are valued at prices provided by principal market makers and pricing agents. Any security for which the primary market is on an exchange is valued at the last sales price on such exchange on the day of valuation or, if there was no sale on such day, the last bid price quoted on such day. Securities issued in private placements are valued at the bid price or the mean between the bid and

asked prices, if available, provided by principal market makers. Any security for which a reliable market quotation is unavailable is valued at fair value as determined in good faith by or under the direction of the Fund's Board of Directors. Using fair value to price securities may result in a value that is different from a security's most recent closing price and from the price used by other mutual funds to calculate their net asset values.

Short-term securities which mature in sixty days or less, are valued at amortized cost, Which approximates market value. The amortized cost method involves valuing a security at its cost on the date of purchase and thereafter assuming a constant amortization to maturity of the difference between the principal amount due at maturity and cost. Short-term securities which mature in more than sixty dates are valued at current market quotations.

The Fund may invest up to 20% of its total assets in securities which are not readily marketable, including those which are restricted as to disposition under securities law ( restricted securities ).
