Item 8.01 Other Events

On May 4, 2007, Viragen, Inc. announced that Sloan-Kettering Institute for Cancer Research and the Company have decided to end the collaboration on VG101, a jointly-owned humanized antibody being developed for the treatment of Stage IV malignant melanoma. The collaborative research agreement between Sloan-Kettering Institute for Cancer Research and the Company, which was entered into in February 2002 and subsequently amended, expired on May 1, 2007. Viragen intends to refocus resources on preclinical studies planned for two of Viragen's anti-cancer product candidates: VG102, a monoclonal antibody that has the potential to target nearly all solid tumors; and VG106, an in-house developed cytokine that has been shown, in preliminary studies, to prevent proliferation of several difficult-to-treat cancers.

On May 4, 2007, we issued a press release announcing the end of this collaboration. The full text of the press release is furnished as Exhibit 99.1 to this report.

Item 9.01 Financial Statements and Exhibits

(d) *Exhibits.*
