AMARIN CORPORATION PLC

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

For purposes of this Quarterly Report on Form 10-Q, our ordinary shares may also be referred to as common shares or common stock.

(1) Nature of Business and Basis of Presentation

Nature of Business

Amarin Corporation plc, Amarin or the Company, is a public limited company with its primary stock market listing in the United States on the NASDAQ Capital Market (AMRN). Amarin was originally incorporated in England as a private limited company on March 1, 1989 under the Companies Act 1985, and re-registered in England as a public limited company on March 19, 1993.

Amarin is a clinical-stage biopharmaceutical company focused on developing improved treatments for cardiovascular disease. The Company is currently focusing its efforts on AMR101 (icosapent ethyl), a prescription-only omega-3 fatty acid, comprising not less than 96% ultra pure icosapent ethyl (ethyl-EPA).

Basis of Presentation

The accompanying unaudited condensed consolidated financial statements of the Company and subsidiaries are unaudited and have been prepared on a basis that assumes that the Company will continue as a going concern, which contemplates the realization of assets and the satisfaction of liabilities and commitments in the normal course of business. Certain information and footnote disclosures normally included in financial statements prepared in accordance with accounting principles generally accepted in the United States (U.S. GAAP) have been condensed or omitted pursuant to the rules and regulations of the U.S. Securities and Exchange Commission. These financial statements should be read in conjunction with the audited financial statements and notes included in the Company's Annual Report on Form 10-K for the year ended December 31, 2010. The Company's current focus is on the development and commercialization of AMR101, which is still under development and not available for sale. However, the Company is not considered a development stage business, as the release and sale of the previous product represented the exit of the Company from the development stage.

The notes and accompanying condensed consolidated financial statements are unaudited. The information furnished reflects all adjustments, which, in the opinion of management, are necessary for a fair presentation of results for the interim periods. Such adjustments consisted only of normal recurring items. The interim periods are not necessarily indicative of the results expected for the full year or any future period.

The preparation of these condensed consolidated financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of net sales and expenses during the reporting period. Actual results could differ from those estimates.

At June 30, 2011, the Company had cash and cash equivalents of \$131.4 million. The Company's consolidated balance sheet also includes a significant derivative liability (see footnote 3 warrants and derivative liability) reflecting the fair value of outstanding warrants to purchase shares of the Company's common stock. This liability can only be settled in shares of the Company's stock and, as such, would only result in cash inflows upon the exercise of the warrants not a cash outflow. Accordingly, this warrant derivative liability presents neither a short nor long-term claim on the liquid assets of the Company.

In January 2011, the Company completed an offering of 13.8 million American Depositary Shares (ADSs), with each ADS representing one share of the Company's common stock. The shares were sold at a price of \$7.60 per share, and resulted in net proceeds of \$98.7 million.

The Company believes its cash will be sufficient to fund its projected operations for the next twelve months which contemplates not only working capital and general corporate needs but also the filing of a New Drug Application (NDA), commercial preparation of AMR101 and the initiation of a clinical outcomes study. This is based on management's current operational plans and does not assume any cash inflows from strategic collaborations, warrant exercises or from equity or debt financings which may occur in future periods.

Table of Contents

Unless the Company enters into a strategic collaboration to provide additional capital in connection with the launch, marketing and sale of AMR101, the Company will need to raise additional funds on its own to support these efforts. Additional financing may not be available when the Company needs it or may not be available on terms that are favorable to it. If adequate funds are not available to the Company on a timely basis, or at all, the Company may be required to delay the establishment of sales and marketing capabilities or terminate or delay the clinical outcomes study.

(2) Significant Accounting Policies

Cash and Cash Equivalents

Cash and cash equivalents consist of cash, deposits held at call with banks, and short term highly liquid instruments with remaining maturities at the date of purchase of 90 days or less.

Research and Development Costs

The Company charges research and development costs to operations as incurred. Research and development expenses are comprised of costs incurred by the Company in performing research and development activities, including salary and benefits; stock-based compensation expense; laboratory supplies and other direct expenses; contractual services, including clinical trial and pharmaceutical development costs; commercial supply investment in its drug candidates; and infrastructure costs, including facilities costs and depreciation expense.

Marketing, General and Administrative Costs

Warrant related expense from non-cash changes in fair value of the warrant derivative liability associated with warrants issued in October 2009 to former employees of Amarin is recorded as compensation expense and classified as part of marketing, general and administrative costs, net of warrants exercised.

Income Taxes

Deferred tax assets and liabilities are recognized for the future tax consequences of differences between the carrying amounts and tax bases of assets and liabilities and operating loss carryforwards and other attributes using enacted rates expected to be in effect when those differences reverse. Valuation allowances are provided against deferred tax assets that are not more likely than not to be realized.

The Company provides reserves for potential payments of tax to various tax authorities or does not recognize tax benefits related to uncertain tax positions and other issues. Tax benefits for uncertain tax positions are based on a determination of whether a tax benefit taken by the Company in its tax filings or positions is more likely than not to be realized, assuming that the matter in question will be decided based on its technical merits. The Company's policy is to record interest and penalties in the provision for income taxes.

Net Loss per Share

Basic net loss per share is determined by dividing net loss by the weighted average shares of common stock outstanding during the period. Diluted net loss per share is determined by dividing net loss by diluted weighted average shares outstanding. Diluted weighted average shares reflects the dilutive effect, if any, of potentially dilutive common shares, such as common stock options and warrants calculated using the treasury stock method and convertible notes using the if-converted method. In periods with reported net operating losses, all common stock options and warrants are deemed anti-dilutive such that basic net loss per share and diluted net loss per share are equal.

Stock-Based Compensation

Stock-based compensation cost is measured at the grant date, based on the fair value of the award, and is recognized as compensation cost over the requisite service period.

Derivative Instruments

Derivative financial liabilities are recorded at fair value, with gains and losses arising for changes in fair value recognized in the statement of operations at each period end while such instruments are outstanding. If the Company issues shares to discharge the liability, the derivative

financial liability is derecognized and common stock and additional paid-in capital are recognized on the issuance of those shares. The warrants are valued using a Black-Scholes option pricing model or a Monte Carlo simulation depending on the nature of instrument.

Table of Contents

If the terms of warrants that initially require the warrants to be classified as derivative financial liabilities lapse, the derivative financial liability is reclassified out of financial liabilities into equity at its fair value on that date. At settlement date, if the instruments are settled in shares the carrying value of the warrants are derecognised and transferred to equity at their fair value at that date. The cash proceeds received from exercises of warrants are recorded in common stock and additional paid-in capital.

Foreign Currency

All subsidiaries use the United States dollar as the functional currency. Monetary assets and liabilities denominated in a foreign currency are remeasured into United States dollars at year-end exchange rates. Non-monetary assets and liabilities carried in a foreign currency are remeasured into United States dollars using rates of exchange prevailing when such assets or liabilities were obtained or incurred, and expenses are generally remeasured using rates of exchange prevailing when such expenses are incurred. Gains and losses from the remeasurement are included in other income, net in the consolidated financial statements of operations. For transactions settled during the period, gains and losses are included in other income, net in the consolidated statements of operations. Foreign exchange gains (and losses) have not been significant in the periods presented.

Fair Value of Financial Instruments

The Company provides disclosure of financial assets and financial liabilities that are carried at fair value based on the price that would be received upon sale of an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value measurements may be classified based on the amount of subjectivity associated with the inputs to fair valuation of these assets and liabilities using the following three levels:

Level 1 Inputs are unadjusted quoted prices in active markets for identical assets or liabilities that the Company has the ability to access at the measurement date.

Level 2 Inputs include quoted prices for similar assets and liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability (i.e., interest rates, yield curves, etc.) and inputs that are derived principally from or corroborated by observable market data by correlation or other means (market corroborated inputs).

Level 3 Unobservable inputs that reflect the Company's estimates of the assumptions that market participants would use in pricing the asset or liability. The Company develops these inputs based on the best information available, including its own data.

The following table presents information about the Company's liability as of June 30, 2011 and December 31, 2010 that is measured at fair value on a recurring basis and indicates the fair value hierarchy of the valuation techniques the Company utilized to determine such fair value:

<i>In thousands</i>		June 30, 2011			
		Total	Level 1	Level 2	Level 3
Liability:					
Warrant derivative liability		\$ 285,984	\$	\$	\$ 285,984

<i>In thousands</i>		December 31, 2010			
		Total	Level 1	Level 2	Level 3
Liability:					
Warrant derivative liability		\$ 230,069	\$	\$	\$ 230,069

The carrying amounts of cash, cash equivalents, accounts payable and accrued liabilities approximate fair value because of their short-term nature.

At December 31, 2010, the fair value of the warrant derivative liability was determined to be \$230.1 million using the Black-Scholes option valuation model applying the following assumptions: (i) risk-free rate of 1.52%, (ii) remaining term of 3.8 years, (iii) no dividend yield (iv) volatility of 117%, and (v) the stock price on the date of measurement.

Edgar Filing: AMARIN CORP PLC\UK - Form 10-Q

At June 30, 2011, the fair value of the warrant derivative liability was determined to be \$286.0 million using the Black-Scholes option valuation model applying the following assumptions: (i) risk-free rate of 1.05%, (ii) remaining term of 3.3 years, (iii) no dividend yield (iv) volatility of 117%, and (v) the stock price on the date of measurement. The \$55.9 million increase in the fair value of the warrant liability during the six months ended June 30, 2011 was recognized as: (i) a \$108.5 million transfer from warrant liability to additional paid-in capital for the fair value of warrants exercised during the six months ended June 30, 2011, (ii) a \$160.0 million loss

Table of Contents

on change in fair value of the remaining derivative liability and (iii) \$4.4 million compensation expense for change in fair value of warrants issued to former employees, all amounts are included in the consolidated statement of operations for the six months ended June 30, 2011. The change in the fair value of the warrant derivative liability is as follows (in thousands):

	Three months ended June 30	Six months ended June 30
Balance at March 31, 2010 & December 31, 2009	\$ 43,686	\$ 41,520
Loss on change in fair value of derivative liability	29,920	32,032
Compensation expense for change in fair value of warrants issued to former employees	768	822
Transfers to equity	(1,952)	(1,952)
Balance at June 30, 2010	\$ 72,422	\$ 72,422

	Three months ended June 30	Six months ended June 30
Balance at March 31, 2011 & December 31, 2010	\$ 174,819	\$ 230,069
Loss on change in fair value of derivative liability	185,359	160,017
Compensation expense for change in fair value of warrants issued to former employees	5,035	4,356
Transfers to equity	(79,229)	(108,458)
Balance at June 30, 2011	\$ 285,984	\$ 285,984

Segment and Geographical Information

For the three and six months ended June 30, 2011 and 2010, the Company has reported its business as a single reporting segment. The Company's chief decision maker, who is the Chief Executive Officer, regularly evaluates the Company on a consolidated basis.

Recent Accounting Pronouncements

From time to time, new accounting pronouncements are issued by FASB and are adopted by the Company as of the specified effective date. The Company believes that the impact of other recently issued but not yet adopted accounting pronouncements will not have a material impact on consolidated financial position, results of operations, and cash flows, or do not apply to the Company's operations.

(3) Warrants and Derivative Liability

The Company has 23,664,090 warrants to purchase common shares outstanding at June 30, 2011 at a weighted-average exercise price of \$1.48, as summarized in the following table:

Issue Date	Amount	Exercise Price	Expiration Date
4/27/07	17,500	17.90	1/17/2014
6/1/07	55,737	7.20	5/31/12
12/5/07	539,027	1.17	12/3/12
7/31/09	138,888	1.00	7/30/14
7/31/09	1,666,000	1.00	7/30/14
10/16/09	20,599,888	1.50	10/15/14
10/16/09	647,050	1.50	10/15/14

23,664,090

\$ 1.48

October 2009 Warrants

On October 16, 2009, the Company completed a \$70.0 million private placement with both existing and new investors resulting in \$62.3 million in net proceeds and an additional \$3.6 million from bridge notes converted in conjunction with the private placement. In consideration for the \$62.3 million in net cash proceeds Amarin issued 66.4 million units, each unit consisting of (i) one ADS (representing one ordinary share) at a purchase price of \$1.00 and (ii) a warrant with a five year term to purchase 0.5 of an ADS at an exercise price of \$1.50 per ADS. In consideration for the conversion of \$3.6 million of convertible bridge notes, Amarin issued 4.0 million units, each unit consisting of (i) one ADS (representing one ordinary share) at a purchase price of \$0.90 and (ii) a warrant

Table of Contents

with a five year term to purchase 0.5 of an ADS at an exercise price of \$1.50 per ADS. The total number of warrants issued in conjunction with the financing was 35.2 million.

The warrants issued in connection with the October 2009 financing contained a pricing variability feature which provided for an increase to the exercise price if the exchange rate between the U.S. dollar and British pound adjusts such that the warrants could be issued at a price less than the £0.5 par value of the common stock that is, if the exchange rate exceeded U.S. \$3.00 per £1.0 sterling. Due to the potential variable nature of the exercise price, the warrants are not considered to be indexed to the Company's common stock. Accordingly, the warrants do not qualify for the exception to classify the warrants within equity and are classified as a derivative liability. The fair value of this warrant derivative liability is remeasured at each reporting period, with changes in fair value recognized in the statement of operations. The fair value of the warrants at December 31, 2010 was determined to be approximately \$230.1 million using the Black-Scholes option pricing model.

Although the warrants contain a pricing variability feature, the number of warrants issuable remains fixed. Therefore, as of June 30, 2011 the maximum number of common shares issuable as a result of the October 2009 private placement is 21.2 million. During the three and six months ended June 30, 2011, approximately 5.6 million and 9.6 million of the October 2009 warrants were exercised, respectively, resulting in gross proceeds to the Company of approximately \$8.4 million and \$14.3 million, respectively. No warrants were exercised in the six months ended June 30, 2010. Upon exercise, the fair value of the warrants exercised is remeasured and reclassified from warrant liability to additional paid-in capital. The \$108.5 million fair value of the exercised warrants was transferred from warrant liability to additional paid in capital with the change in the fair value on the exercise date recognized in the statement of operations. The fair value of the warrant liability at June 30, 2011 for the remaining warrants was determined to be approximately \$286.0 million. The Company recognized a loss on change in fair value of derivative liability of \$160.0 million and compensation expense of \$4.4 million for the six month period ended June 30, 2011.

(4) Commitments and Contingencies

Litigation

The Company is, from time to time, subject to legal proceedings, claims, and litigation arising in the normal course of business. At June 30, 2011, there were no asserted claims against the Company which, in the opinion of management, would have a material effect on the consolidated financial statements.

Royalty and Milestone Obligations

The Company is party to certain milestone and royalty obligations under several product development agreements, as follows:

An agreement in respect of certain patents and other intellectual property rights relating to a formulation of the compound Apomorphine, no longer in development;

The 2010 supply agreement with the Company's existing Japan-based supplier: (i) a one-time non refundable payment of \$0.5 million is due to the supplier upon the first marketing approval of AMR101 in the United States (ii) the Company is subject to minimum supply purchase commitments; and (iii) if the Company is not successful in obtaining NDA approval for AMR101, a penalty equal to the facility expansion costs incurred by the supplier to meet the supply demands, not to exceed \$5.0 million, less any profits paid to the supplier for purchased materials under the existing agreement;

The Company signed agreements in the second quarter of 2011 for the supply of materials for AMR101 with two new API suppliers, Equateq and Chemport. These agreements provide access to additional API supply that is incremental to supply from its existing Japan-based API supplier. These agreements include requirements for the suppliers to qualify their materials and facilities. The Company anticipates incurring certain costs associated with the qualification of product produced by these suppliers. Following FDA approvals of AMR101, both agreements include annual purchase levels to enable Amarin to maintain exclusivity with each respective supplier, and to prevent potential termination of the agreements. Because the Company has not yet obtained FDA approval for AMR101, no liability has been recorded. The 2011 supply agreement with Equateq also includes (i) a one-time commitment fee of \$1.0 million, (ii) development fees up to a maximum of \$0.5 million, and (iii) material commitments of up to \$5.0 million for

Edgar Filing: AMARIN CORP PLC\UK - Form 10-Q

initial raw materials, which will be credited against future API purchases, and is refundable to Amarin if Equateq fails to successfully develop and qualify the API by a certain date. The \$1.0 million commitment fee paid to Equateq in May 2011 has been included in other assets at June 30, 2011, and is refundable if Equateq does not meet specified obligations. The 2011 supply agreement with Chemport includes, prior to a marketing approval, a raw material purchase commitment of \$1.1 million. No payments have been made under this agreement as of June 30, 2011;

Concurrent with the agreement with Chemport for commercial supply, Amarin agreed to make a minority share equity investment in Chemport of up to \$3.3 million. No investment under this agreement has been made as of June 30, 2011.

Table of Contents

The 2009 Lorazepam sale agreement with Elan, whereunder Elan did not assume any obligations under a related Neurostat development agreement and, as a result, Amarin retained a potential obligation to make two milestone payments to Neurostat, contingent upon future events: (i) a \$0.2 million payment if the drug is administered to human subjects by Elan and (ii) a \$0.2 million payment if the drug is tested by Elan in an efficacy study; and

Under the 2004 share repurchase agreement with Laxdale Limited, in connection with commercialization of AMR101 for cardiovascular indications, prior to the end of 2012 the Company is required to pay potential royalties to a former employee of Laxdale of 1% on net sales up to £100 million (approximately \$160 million at June 30, 2011); 0.5% for net sales between £100 million (approximately \$160 million at June 30, 2011) and £500 million (approximately \$801 million at June 30, 2011); and 0.25% for sales in excess of £500 million (approximately \$801 million at June 30, 2011).

In addition, under this same agreement with Laxdale Limited, upon receipt of marketing approval in the U.S. and/or Europe for the first indication for AMR101 (or first indication of any product containing Amarin Neuroscience intellectual property acquired from Laxdale Limited in 2004), the Company must make an aggregate stock or cash payment to the former shareholders of Laxdale Limited (at the sole option of each of the sellers) of £7.5 million (approximately \$12 million at June 30, 2011) for each of the two potential marketing approvals (i.e. £15 million maximum, or approximately \$24 million at June 30, 2011). In addition, upon receipt of a marketing approval in the U.S. or Europe for a further indication of AMR101 (or further indication of any other product using Amarin Neuroscience intellectual property), the Company must make an aggregate stock or cash payment (at the sole option of each of the sellers) of £5 million (approximately \$8 million at June 30, 2011) for each of the two potential market approvals (i.e. £10 million maximum, or approximately \$16 million at June 30, 2011).

The Company has no provision for any of the obligations noted above since the amounts are either not probable or estimable at June 30, 2011.

(5) Equity

Common stock

In January 2011, Amarin sold 13.8 million common shares to both existing and new investors at a price of \$7.60 per share, resulting in net proceeds of \$98.7 million.

During the three and six months ended June 30, 2011, the Company issued 1,169,898 and 2,164,647 shares, respectively, as a result of the exercise of stock options, resulting in net proceeds of \$3.2 million and \$5.0 million, respectively. In addition, during the three and six months ended June 30, 2011, the Company issued 5,773,278 and 10,330,642 shares, respectively, as a result of the exercise of warrants, resulting in net proceeds of \$8.5 million and \$14.9 million, respectively.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

This Quarterly Report on Form 10-Q contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, as amended. These forward-looking statements reflect our plans, estimates and beliefs. These statements involve known and unknown risks, uncertainties and other factors that may cause our actual results, performance or achievements to be materially different from any future results, performances or achievements expressed or implied by the forward-looking statements. In some cases, you can identify forward-looking statements by terms such as anticipates, believes, could, estimates, expects, intends, may, plans, potential, predicts, projects, similar expressions intended to identify forward-looking statements. Forward-looking statements reflect our current views with respect to future events and are based on assumptions and subject to risks and uncertainties. Because of these risks and uncertainties, the forward-looking events and circumstances discussed in this report may not transpire. We discuss many of these risks in Part I, Item 1A under the heading Risk Factors of our Annual Report on Form 10-K for the fiscal year ended December 31, 2010 and below under Part II, Item 1A, Risk Factors.

Given these uncertainties, you should not place undue reliance on these forward-looking statements. Also, forward-looking statements represent our estimates and assumptions only as of the date of this document. You should read this document with the understanding that our actual future results may be materially different from what we expect. Except as required by law, we do not undertake any obligation to publicly update or revise any forward-looking statements contained in this report, whether as a result of new information, future events or otherwise.

Table of Contents

Overview

We are a clinical-stage biopharmaceutical company focused on developing improved treatments for cardiovascular disease. We are currently focusing our efforts on AMR101, a semi-synthetic omega-3 fatty acid, comprising not less than 96% ultra pure icosapent ethyl (ethyl-EPA). On October 16, 2009, we completed a private placement resulting in gross proceeds of \$70.0 million. These proceeds were used primarily to fund the MARINE and ANCHOR studies for AMR101. In connection with this private placement, a significant portion of our board of directors and executive management were changed, and our research and development activities, as well as certain executive functions, were consolidated in the United States. In connection with these changes, we re-focused our efforts on developing improved treatments for cardiovascular disease and ceased development of all product candidates outside of our cardiovascular disease focus.

In November 2010, we reported positive top-line results from the MARINE trial, the first to complete of our two concurrently run Phase 3 clinical trials of AMR101. In the MARINE trial, AMR101 was investigated as a treatment for patients with very high triglycerides (≥ 500 mg/dL). The MARINE trial was a multi-center, placebo-controlled, randomized, double-blind, 12-week pivotal study to evaluate the efficacy and safety of 2 grams and 4 grams of AMR101 in 229 patients with fasting triglyceride levels ≥ 500 mg/dL. Patients with this level of triglycerides are characterized as having very high triglyceride levels, as outlined in the National Cholesterol Education Program (NCEP) Expert Panel (Adult Treatment Panel III, 2002), or the NCEP Guidelines. The primary endpoint in the trial was the percentage change in triglyceride level from baseline compared to placebo after 12 weeks of treatment. Reported top-line results of this study included announcement that AMR101 met the primary endpoint at both the 4 gram and 2 gram doses. In addition to achieving the primary endpoint of the trial, no statistically significant increase in low-density lipoprotein cholesterol, or LDL-C, was observed in this trial at either dose. Additionally, we observed in the trial a safety profile for AMR101 similar to placebo.

Patients enrolled in the MARINE trial were given the option to continue on with AMR101 treatment for a period of up to 40-weeks after their last dose in the pivotal trial. The results from this 40-week open label extension period are not part of the MARINE trial primary endpoints.

In April 2011, we reported positive top-line results from the ANCHOR trial, the second of our two Phase 3 clinical trials of AMR101. In the ANCHOR trial, AMR101 was investigated as a treatment for patients with high triglycerides (≥ 200 and < 500 mg/dL) who are also receiving statin therapy. The ANCHOR trial was a multi-center, placebo-controlled, randomized, double-blind, 12-week pivotal study to evaluate the efficacy and safety of 2 grams and 4 grams of AMR101 in 702 patients with high triglycerides who were on optimized statin therapy. Patients in this trial are characterized as having high triglyceride levels, as outlined in the NCEP Guidelines, with mixed dyslipidemia (two or more lipid disorders). The primary endpoint in the trial was the percentage change in triglyceride level from baseline compared to placebo after 12 weeks of treatment. No prescription omega-3 based drug is currently approved in the U.S. for treating high triglyceride levels in statin-treated patients who have mixed dyslipidemia. Reported top-line results of this study included an announcement that AMR101 met the study's primary endpoint at both the 4 gram and 2 gram doses. In addition, AMR101 met each of the secondary endpoints in the trial, including at both doses the key secondary endpoint of LDL-C non-inferiority to statin therapy alone. Additionally, we observed in the trial a safety profile for AMR101 similar to placebo.

In addition to achieving the primary endpoints of the MARINE and ANCHOR trials AMR101, particularly at the 4 gram dose, demonstrated significant reductions in various secondary and exploratory efficacy endpoints for other lipid and inflammatory biomarkers which we believe are important as they represent additional predictors of cardiovascular risk. These biomarkers include total cholesterol; non-HDL-cholesterol; VLDL-cholesterol; Apo B (Apolipoprotein B), a sensitive index of residual cardiovascular risk which is generally considered to be a better predictor than LDL-C; Lp-PLA2 (Lipoprotein-phospholipase A2), an enzyme found in blood and atherosclerotic plaque and high levels of which have been implicated in the development and progression of atherosclerosis; and high sensitivity C-reactive protein (hsCRP), an important marker of vascular inflammation.

The MARINE and ANCHOR trials were conducted under separate SPAs with the FDA. An SPA is an evaluation by the FDA of a protocol with the goal of reaching an agreement that the Phase III trial protocol design, clinical endpoints, and statistical analyses are acceptable to support regulatory approval. The FDA agreed that, based on the information we submitted to the agency, the design and planned analysis of the MARINE and ANCHOR trials adequately address the objectives necessary to support a regulatory submission. An SPA is generally binding upon the FDA unless a substantial scientific issue essential to determining safety or efficacy is identified after the testing begins. Although we are not aware of any such issue, there is no assurance that the FDA will ultimately consider either of our SPAs to be binding. Moreover, any change to a study protocol can invalidate an SPA. If the FDA does not consider either of the SPAs to be binding, the agency could assert that additional studies or data are required to support a regulatory submission.

Table of Contents

We currently expect to submit a New Drug Application, or NDA, to the FDA in the third quarter of 2011 requesting approval to market and sell AMR101 for the indication studied in the MARINE trial (for the treatment of patients with very high triglycerides) in the United States. We plan to include the ANCHOR trial results in the NDA we submit to the FDA. We expect the NDA we file with the FDA to seek approval for the indication studied in the MARINE trial with the ANCHOR results referenced in the Other Clinical Experience section of the label as data supporting the safe use of AMR101 in the treatment of high triglyceride levels in statin-treated patients who have mixed dyslipidemia.

In order to obtain a separate indication for AMR101 based on the ANCHOR trial results, our SPA with the FDA requires that we have a cardiovascular outcomes study substantially underway at the time of the NDA submission. The final results of an outcomes study are not required for FDA approval of the broader indication and an outcomes study is not required for the indication being studied in the MARINE trial. We are in the late stages of designing a cardiovascular outcomes study to support the indication studied in the ANCHOR trial. This outcomes study may also seek additional indications for AMR101 beyond the indication studied in the ANCHOR trial. Potential future indications may include prevention of cardiac events, although there can be no assurance as to whether our potential outcomes study will be designed to support to any such indication. We have received proposals from CROs to support us in the conduct of the outcomes study. We expect, in the third quarter of 2011, to enter into an agreement with a CRO to commence the outcomes study and we will seek to have the outcomes study at least half enrolled by the end of 2012. We project that the outcomes study will cost between \$100 and \$125 million over the course of an anticipated six year study period. We will require additional funds to complete these clinical activities.

In accordance with our SPA for the ANCHOR trial, we currently intend to file a supplemental NDA (sNDA) seeking approval of the indication studied in the ANCHOR trial once we have a cardiovascular outcomes study substantially underway. The sNDA cannot be filed until after both the initially submitted NDA is approved and the cardiovascular outcomes study is substantially underway. However, as part of our interaction with the FDA regarding our NDA for the indication studied in the MARINE trial, we may explore whether there is an opportunity for the indication studied in the ANCHOR trial to be considered in conjunction with the FDA's review of the indication studied in the MARINE trial. However, there can be no assurance that the FDA will approve such an approach.

We have filed and are prosecuting numerous patent applications. These applications are in nine patent families and include many independent claims and dependent claims. Many of the claims are based on unexpected positive findings from the MARINE and ANCHOR trials. If granted, we believe that many of these patents could have expiration dates in 2030. However, no assurance can be given that any of these patents will be granted or, if they grant, that they will protect AMR101 from infringement through the expiration of patent life. We cannot be certain what commercial value any granted patent will provide to us.

In order to commercialize AMR101, we must either develop a sales, marketing and distribution infrastructure or collaborate with third parties that have such experience. With the assistance of financial advisors, we have had in the past, and may continue to have in the future, discussions about collaboration and other strategic opportunities with larger pharmaceutical companies. These strategic opportunities might include licensing or similar transactions, joint ventures, partnerships, strategic alliances, business associations or a sale of the company. However, no assurance can be given that we will enter into any such strategic transaction.

Until such time as we complete any such strategic transaction, if ever, we are continuing to develop plans to launch, market and sell AMR101 on our own. This includes making preparations for securing a sufficient commercial supply of AMR101 and expanding sales and marketing capabilities. In order to secure a sufficient commercial supply of AMR101, during the second quarter of 2011 we completed new agreements for the supply of materials for AMR101 with two new API suppliers, Equateq and Chemport. These agreements would provide for raw materials that are incremental to our existing Japan-based API supplier. Each agreement contemplates a phased capacity expansion plan aimed at creating sufficient capacity to meet anticipated demand for API material for AMR101 following FDA approval. These API suppliers are self-funding these expansion plans with contributions from Amarin. We are also considering adding a fourth API supplier. These agreements include requirements for the qualification of the suppliers' material and facilities. We will make no purchase commitments until such time as these qualification events have been completed.

Opportunities to market and sell AMR101 outside of the United States are also under evaluation.

Unless we enter into a strategic collaboration in connection with the launch, marketing and sale of AMR101 which provides additional capital, we will need to raise additional capital on our own to support these efforts. Additional financing may not be available when we need it or may not be available on terms that are acceptable to us. If adequate funds are not available to us on a timely basis, or at all, we may be required to delay the establishment of sales and marketing capabilities or terminate or delay our planned cardiovascular outcomes study. If we seek to raise additional funds, we may do so through the sale of additional equity, debt or convertible securities. The terms of any financings may be dilutive to, or otherwise adversely affect, holders of our outstanding securities.

As of June 30, 2011, our cash balance was \$131.4 million.

Table of Contents

Financial Operations Overview

Revenue. We recorded no revenue in 2011 or 2010.

Research and Development Expense. Research and development expense consists primarily of fees paid to professional service providers in conjunction with independent monitoring of our clinical trials and acquiring and evaluating data in conjunction with our clinical trials, fees paid to independent researchers, costs of contract manufacturing, services expenses incurred in developing and testing products and product candidates, salaries and related expenses for personnel, including stock-based compensation expense, costs of materials, depreciation, rent, utilities and other facilities costs. In addition, research and development expenses include the cost to support current development efforts, including patent costs and milestone payments. We expense research and development costs as incurred.

Marketing, General and Administrative Expense. Marketing, general and administrative expense consists primarily of non-cash warrant related compensation expense attributable to October 2009 warrants issued to former employees, salaries and other related costs for current personnel, including stock-based compensation expense, in our executive, business development, marketing, finance and information technology functions. Other costs primarily include facility costs and professional fees for accounting, consulting and legal services.

Interest and Other (Income) Expense, Net. Interest expense consists of interest incurred under lease obligations. Interest income consists of interest earned on our cash and cash equivalents. Other income, net, consists primarily of foreign exchange gains and losses.

Critical Accounting Policies and Significant Judgments and Estimates

There have been no changes in our critical accounting policies and significant judgments and estimates, as described in Note 2 to our consolidated financial statements included in our Annual Report on Form 10-K for the year ended December 31, 2010 filed with the SEC on March 16, 2011.

Recent Accounting Pronouncements

From time to time, new accounting pronouncements are issued by FASB and are adopted by us as of the specified effective date. Unless otherwise discussed, we believe that the impact of recently issued accounting pronouncements will not have a material impact on consolidated financial position, results of operations, and cash flows, or do not apply to our operations.

Results of Operations

Comparison of Three Months Ended June 30, 2011 versus June 30, 2010

Revenue. We recorded no revenue in 2011 or 2010.

Research and Development Expense. Research and development expense for the three months ended June 30, 2011 was \$5.2 million, versus \$7.8 million in the prior year period, a decrease of \$2.6 million, or 33.3%. Research and development expenses for the three months ended June 30, 2011 and 2010 are summarized in the table below:

	Three Months Ended	
	June 30 2011	2010
Research and development expenses, excluding non-cash expense(1)	\$ 4,959	\$ 7,429
Non-cash stock based compensation expense (2)	230	342
	\$ 5,189	\$ 7,771

- (1) Research and development expense, excluding non-cash charges, for the three months ended June 30, 2011 was \$5 million, versus \$7.4 million in the prior year period, a decrease of \$2.4 million, or 32.4%. The decrease in research and development expense was primarily due to lower costs in 2011 for our AMR101 cardiovascular program, primarily costs associated with our two Phase III clinical trials incurred through Medpace, the clinical research organization (CRO) we engaged in late 2009 to help manage the two trials. We began enrolling patients in these trials in early 2010 and announced the completion of enrollment in both trials during the second half of 2010 with top-line results announced in November 2010 and April 2011 for the MARINE and ANCHOR trials, respectively. We estimate incurring approximately \$2.6 million in additional expense through this CRO to complete these studies, including completion of the patient-optional open-label extension period of the MARINE study which is scheduled to be completed before September 30, 2011.

Table of Contents

- (2) Stock based compensation expense included within research and development was \$0.2 million and \$0.3 million for the three months ended June 30, 2011 and 2010, respectively.

Our estimate of remaining costs to be incurred to complete the MARINE and ANCHOR studies are significantly lower than the costs we included for these studies during 2010. However, we anticipate the decline in research and development expenditures for those two trials to be offset by an increase in clinical costs associated with our planned cardiovascular outcomes study. We currently estimate that cumulative costs incurred through a CRO for an outcomes study will approximate \$25 million by the end of 2012.

Marketing, General and Administrative Expense. Marketing, general and administrative expense for the three months ended June 30, 2011 was \$10 million, versus \$2.8 million in the prior year period, an increase of \$7.2 million, or 257.14%. Marketing, general and administrative expenses for the three months ended June 30, 2011 and 2010 are summarized in the table below:

	Three Months Ended	
	June 30 2011	2010
Marketing, general and administrative expenses, excluding non-cash expense (1)	\$ 3,400	\$ 1,786
Non-cash stock based compensation expense (2)	1,590	264
Non-cash warrant related compensation (income) expense (3)	5,035	768
	\$ 10,025	\$ 2,818

- (1) Marketing, general and administrative expense, excluding non-cash compensation charges for stock compensation and warrants, for the three months ended June 30, 2011 was \$3.4 million, versus \$1.8 million in the prior year period, an increase of \$1.6 million, or 88.9%. The increase was primarily due to higher staffing and marketing related expenses in 2011 to prepare for the commercialization of AMR101.
- (2) Stock based compensation expense for the three months ended June 30, 2011 was \$1.6 million, versus \$0.3 million in the prior year period, an increase of \$1.3 million reflecting an increase in expense associated with option awards granted in 2010 and the first half of 2011 to attract and retain qualified employees.
- (3) Warrant related compensation expense for the three months ended June 30, 2011 was \$5.0 million, versus \$0.8 million in the prior year period. Warrant related compensation expense for the three months ended June 30, 2011 reflects a non-cash change in fair value of the warrant derivative liability associated with warrants issued in October 2009 to former employees of Amarin, net of warrants exercised. The decrease in the fair value of the warrants for the three months ended June 30, 2011 is due primarily to an increase in our stock price between March 31, 2011 and June 30, 2011. We anticipate that the value of this warrant derivative liability may increase or decrease from period to period based upon changes in the price of our common stock. Such non-cash changes in valuation could be significant as the history of our stock price has been volatile. The gain or loss resulting from such non-cash changes in valuation could have a material impact on our reported net income or loss from period to period. In particular, if the price of our stock increases, the change in valuation of this warrant derivative liability will add to our history of operating losses.

We expect marketing, general and administrative costs, excluding non-cash warrant related compensation expense the value of which we cannot reasonably estimate, to increase as we prepare for the commercialization of AMR101, including costs for market research, sales force preparation and inventory management.

Loss on Change in Fair Value of Derivative Liability. Loss on change in fair value of derivative liability for the three months ended June 30, 2011 was a loss of \$185.4 million versus a loss of \$29.9 million in the prior year period. Loss on change in fair value of derivative liability is related to the change in fair value of warrants issued in conjunction with the October 2009 private placement. In October 2009 we issued 36.1 million warrants at an exercise price of \$1.50 and recorded a \$48.3 million warrant derivative liability, representing the fair value of the warrants issued. As these warrants have been classified as a derivative liability, they are revalued at each reporting period, with changes in fair value recognized in the statement of operations. The fair value of the warrant derivative liability at March 31, 2011 was \$174.8 million and we recognized a \$185.4 million loss on change in fair value of derivative liability for the three months ended June 30, 2011 for these warrants. The fair value of the warrant derivative liability at March 31, 2010 was \$43.7 million and we recognized a \$29.9 million loss on change in fair value of derivative liability for the three months ended June 30, 2010. The decrease or increase in the fair value of the warrant derivative liability is due primarily to the decrease or increase in the price of our common stock on the date of valuation.

Interest (Income) Expense, net. Interest income includes interest earned on cash balances.

Other Income, net. Other income primarily includes gains and losses on foreign exchange transactions.

Table of Contents**Comparison of Six Months Ended June 30, 2011 versus June 30, 2010**

Revenue. We recorded no revenue in 2011 or 2010.

Research and Development Expense. Research and development expense for the six months ended June 30, 2011 was \$9.6 million, versus \$12.9 million in the prior year period, a decrease of \$3.3 million, or 25.6%. Research and development expenses for the six months ended June 30, 2011 and 2010 are summarized in the table below:

	Six Months Ended	
	June 30 2011	2010
Research and development expenses, excluding non-cash expense(1)	\$ 9,108	\$ 12,210
Non-cash stock based compensation expense (2)	530	714
	\$ 9,638	\$ 12,924

- (1) Research and development expense, excluding non-cash charges, for the six months ended June 30, 2011 was \$9.1 million, versus \$12.2 million in the prior year period, a decrease of \$3.1 million, or 25.4%. The decrease in research and development expense was primarily due to lower costs in 2011 for our AMR101 cardiovascular program, primarily costs associated with our two Phase III clinical trials incurred through Medpace, the CRO we engaged in late 2009 to help manage the two trials. We began enrolling patients in these trials in early 2010 and completed enrollment in both trials during the second half of 2010. We estimate incurring approximately \$2.6 million in additional expense through this CRO to complete these studies, including completion of the patient-optional open-label extension period of the MARINE study which is scheduled to be completed before September 30, 2011.
- (2) Stock based compensation expense included within research and development was \$0.5 million and \$0.7 million for the six months ended June 30, 2011 and 2010, respectively.

Our estimate of remaining costs to be incurred to complete the MARINE and ANCHOR studies are significantly lower than the costs we included for these studies during 2010. However, we anticipate the decline in research and development expenditures for those two trials to be offset by an increase in clinical costs associated with our planned cardiovascular outcomes study. We currently estimate that cumulative costs incurred through a CRO for an outcomes study will approximate \$25 million by the end of 2012.

Marketing, General and Administrative Expense. Marketing, general and administrative expense for the six months ended June 30, 2011 was \$12.8 million, versus \$5.1 million in the prior year period, an increase of \$7.7 million. Marketing, general and administrative expenses for the six months ended June 30, 2011 and 2010 are summarized in the table below:

	Six Months Ended	
	June 30 2011	2010
Marketing, general and administrative expenses, excluding non-cash expense (1)	\$ 5,565	\$ 3,712
Non-cash stock based compensation expense (2)	2,830	537
Non-cash warrant related compensation expense (3)	4,356	822
	\$ 12,751	\$ 5,071

- (1) Marketing, general and administrative expense, excluding non-cash compensation charges for stock compensation and warrants, for the six months ended June 30, 2011 was \$5.6 million, versus \$3.7 million in the prior year period, an increase of \$1.9 million, or 51.4%. The

- increase was primarily due to higher staffing and marketing related expenses in 2011 to prepare for the commercialization of AMR101.
- (2) Stock based compensation expense for the six months ended June 30, 2011 was \$2.8 million, versus \$0.5 million in the prior year period, an increase of \$2.3 million, reflecting an increase in expense associated with option awards granted in 2010 and the first half of 2011 to attract and retain qualified employees.
- (3) Warrant related compensation expense for the six months ended June 30, 2011 was \$4.4 million, versus \$0.8 million in the prior year period. Warrant related compensation expense reflects the non-cash change in fair value of the warrant derivative liability associated with warrants issued in October 2009 to former employees of Amarin, net of warrants exercised. The increase in the fair value of the warrants for the six months ended June 30, 2011 is due primarily to an increase in our stock price between December 31, 2010 and June 30, 2011. We anticipate that the value of this warrant derivative liability may increase or decrease from period to period based upon changes in the price of our common stock. Such non-cash changes in valuation could be

Table of Contents

significant as the history of our stock price has been volatile. The gain or loss resulting from such non-cash changes in valuation could have a material impact on our reported net income or loss from period to period. In particular, if the price of our stock increases, the change in valuation of this warrant derivative liability will add to our history of operating losses.

We expect marketing, general and administrative costs, excluding non-cash warrant related compensation expense the value of which we cannot reasonably estimate, to increase as we prepare for the commercialization of AMR101, including costs for market research, sales force preparation and inventory management.

Loss on Change in Fair Value of Derivative Liability. Loss on change in fair value of derivative liability for the six months ended June 30, 2011 was \$160.0 million versus \$32.0 million in the prior year period. Loss on change in fair value of derivative liability is related to the change in fair value of warrants issued in conjunction with the October 2009 private placement. In October 2009 we issued 36.1 million warrants at an exercise price of \$1.50 and recorded a \$48.3 million warrant derivative liability, representing the fair value of the warrants issued. As these warrants have been classified as a derivative liability, they are revalued at each reporting period, with changes in fair value recognized in the statement of operations. The fair value of the warrant derivative liability at December 31, 2010 was \$230.1 million and we recognized a \$160.0 million gain on change in fair value of derivative liability for the six months period ended June 30, 2011 for these warrants. The fair value of the warrant derivative liability at December 31, 2009 was \$41.5 million and we recognized a \$32.0 million loss on change in fair value of derivative liability for the six months period ended June 30, 2010. The decrease or increase in the fair value of the warrant derivative liability is due primarily to the decrease or increase in the price of our common stock on the date of valuation.

Interest (Income) Expense, net. Interest income includes interest earned on cash balances.

Other Income, net. Other income primarily includes gains and losses on foreign exchange transactions.

Liquidity and Capital Resources

Our sources of liquidity as of June 30, 2011 include cash and cash equivalents of \$131.4 million. Our projected uses of cash include the completion of our two Phase III clinical trials for AMR101, including final analysis of results of the ANCHOR study and completion of the patient-optional open-label extension period of the MARINE study (results from which are not needed for the NDA submission), the submission of an NDA, commencement of a cardiovascular outcomes study, commercial preparation of AMR101, working capital and other general corporate activities. Our cash flows from operating, investing and financing activities, as reflected in the consolidated statements of cash flows, are summarized in the following table (in millions):

	Six Months Ended June 30, 2011	2010
Cash (used in) provided by continuing operations:		
Operating activities	\$ (19.6)	\$ (16.0)
Investing activities		
Financing activities	119.6	1.5
Increase (decrease) in cash and cash equivalents	\$ 100.0	\$ (14.5)

We had no debt obligations at June 30, 2011 or December 31, 2010.

In January 2011, we sold 13.8 million shares of our common shares, par value £0.50 per share, at a price of \$7.60 per share, resulting in net proceeds of approximately \$98.7 million after deducting underwriting commissions and expenses payable by us associated with this transaction.

We believe that our cash will be sufficient to fund our projected operations for the next twelve months which contemplates not only working capital and general corporate needs but also, the filing of an NDA, commencement of a cardiovascular outcomes study and commercial preparations for AMR101. This is based on our current operational plans and activities at normal levels and does not assume any cash inflows from partnerships, warrant exercises or other dilutive or non-dilutive financings in the longer-term. If we elect to commercialize AMR101 ourselves, rather than through a collaborator, we will need additional funds to complete such activities. The sale of any equity or debt securities may result in additional dilution to our stockholders, and we cannot be certain that additional financing will be available in amounts or on terms acceptable to us, if at all.

Table of Contents**Contractual Obligations**

The following table summarizes our contractual obligations at June 30, 2011 and the effects such obligations are expected to have on our liquidity and cash flows in future periods (in millions):

Payments Due by Period

	Total	2011	2012 to 2013	2014 to 2015	After 2015
Contractual Obligations:					
Purchase obligations (1)	\$ 13.4	\$ 0.8	\$ 12.6	\$	\$
Operating lease obligations (2)	1.4	0.6	0.6	0.2	
<u>Total contractual cash obligations</u>	\$ 14.8	\$ 1.4	\$ 13.2	\$ 0.2	\$

- (1) Represents minimum purchase obligations with our Japan-based supplier. We purchased \$1.2 million of materials during the six months ended June 30, 2011 and have additional purchase obligations of \$12.6 million in 2012. Not included in this obligation is a non-refundable milestone payment of \$0.5 million payable upon the first marketing approval of AMR101 in the United States. Additional future minimum purchases will be required, subject to an NDA approval, and in preparation for commercialization of AMR101 we may purchase more than the minimum amount.

In addition, provided the supplier has expanded its manufacturing capacity in accordance with the agreement, the supplier may terminate the agreement in the event that (i) Amarin does not receive marketing approval for AMR101 in the United States on or before December 31, 2014 or (ii) in the event that Amarin abandons development of AMR101 for hypertriglyceridemia in the United States. In either case, Amarin will be required to reimburse the supplier for certain costs incurred by the supplier in connection with its manufacturing expansion, less the amount of profit received as a result of purchases of ethyl-EPA by Amarin, not to exceed \$5.0 million.

We anticipate incurring certain costs associated with the qualification of product produced by this Japan-based supplier. In an effort to further expand production capacity at this supplier or through the addition of supplemental suppliers, we may make capital commitments to support their expansion, particularly if such commitments further reduce the cost to us of the manufactured product.

- (2) Represents operating lease costs, primarily consisting of leases for facilities in Dublin, Ireland, Mystic, CT and Bedminster, NJ. We do not enter into financial instruments for trading or speculative purposes.

The above table does not reflect our contract with Medpace for the conduct of our two registration trials for AMR101. We paid \$5.4 million to Medpace during the six months ended June 30, 2011 and anticipate paying an additional \$3.0 million to Medpace in 2011 prior to the completion of this project.

The above table also does not reflect potential material purchases under new agreements signed in the second quarter of 2011 for the supply of materials for AMR101 with two new API suppliers, Equateq and Chemport. These agreements provide access to additional API supply that is incremental to supply from our existing Japan-based API supplier. Each agreement contemplates a phased capacity expansion plan aimed at creating sufficient capacity to meet anticipated demand for API material for AMR101 following FDA approval. These API suppliers are self-funding these expansion plans with contributions from Amarin. These agreements include requirements for the suppliers to qualify their

materials and facilities. We anticipate incurring certain costs associated with the qualification of product produced by these suppliers. Following FDA approval of AMR101 both agreements include annual purchase levels enabling Amarin to maintain supply exclusivity with each respective supplier, and to prevent potential termination of the agreements. Because the Company has not yet obtained FDA approval for AMR101, these amounts are excluded from the above table. The 2011 supply agreement with Equateq also includes (i) a one-time commitment fee of \$1.0 million, (ii) development fees up to a maximum of \$0.5 million, and (iii) material commitments of up to \$5.0 million for initial raw materials, which will be credited against future API purchases, and is refundable to Amarin if Equateq does not successfully develop and qualify the API by a certain date. The \$1.0 million commitment fee paid to Equateq in May 2011 has been included in other assets at June 30, 2011, and is refundable if

Table of Contents

Equateq does not meet specified obligations. The 2011 supply agreement with Chemport includes, prior to a marketing approval, a raw material purchase commitment of \$1.1 million. No payments have been made under this agreement as of June 30, 2011.

Concurrent with the agreement with Chemport for commercial supply, Amarin agreed to make a minority share equity investment in Chemport of up to \$3.3 million. No investment under this agreement has been made as of June 30, 2011.

Under our 2004 share repurchase agreement with Laxdale Limited, in connection with commercialization of AMR101 for cardiovascular indications, prior to the end of 2012 we are required to pay potential royalties to a former employee of Laxdale of 1% on net sales up to £100 million (approximately \$160 million at June 30, 2011); 0.5% for net sales between £100 million (approximately \$160 million at June 30, 2011) and £500 million (approximately \$801 million at June 30, 2011); and 0.25% for sales in excess of £500 million (approximately \$801 million at June 30, 2011). In addition, under this same agreement with Laxdale Limited, upon receipt of marketing approval in the U.S. and/or Europe for the first indication for AMR101 (or first indication of any product containing Amarin Neuroscience intellectual property acquired from Laxdale Limited in 2004), the Company must make an aggregate stock or cash payment (at the sole option of each of the sellers) of £7.5 million (approximately \$12 million at June 30, 2011) for each of the two potential marketing approvals (i.e. £15 million maximum, or approximately \$24 million at June 30, 2011). In addition, upon receipt of a marketing approval in the U.S. or Europe for a further indication of AMR101 (or further indication of any other product using Amarin Neuroscience intellectual property), the Company must make an aggregate stock or cash payment (at the sole option of each of the sellers) of £5 million (approximately \$8 million at June 30, 2011) for each of the two potential market approvals (i.e. £10 million maximum, or approximately \$16 million at June 30, 2011).

In addition to the obligations in the table above, we have approximately \$0.5 million of gross liability for uncertain tax positions that have been recorded as liabilities at December 31, 2010. We are not able to reasonably estimate in which future periods these amounts will ultimately be settled.

Off-Balance Sheet Arrangements

We do not have any special purpose entities or other off-balance sheet arrangements.

Shelf Registration Statement

On March 29, 2011, we filed with the SEC a universal shelf registration statement on Form S-3 (Registration No. 333-173132), which provides for the offer, from time to time, of an indeterminate and unlimited amount of: ordinary shares, which may be represented by American Depositary Shares; preference shares, which may be represented by American Depositary Shares; senior or subordinated debt securities; warrants to purchase any of these securities; and any combination of these securities, individually or as units. In addition, if we identify any security holder(s) in a prospectus supplement, they may also offer identified securities under this registration statement although we will not receive any of the proceeds from the sale of securities by any of these selling security holders. This universal shelf registration statement was automatically effective upon its filing. The addition of any newly issued equity securities into the market may be dilutive to existing stockholders and new issuances by us or sales by our selling security holders could have an adverse effect on the price of our securities.

Item 3. *Quantitative and Qualitative Disclosures about Market Risk*

We are exposed to market risks, which include changes in interest rates, changes in credit worthiness and liquidity of our marketable securities. We do not use derivative financial instruments in our investment portfolio and have no foreign exchange contracts. We record as a liability the fair value of warrants to purchase 21.2 million shares of our common stock issued to investors. The fair value of this warrant liability is determined using the Black-Scholes option valuation model and is therefore sensitive to changes in the market price and volatility of our common stock among other factors. In the event of a hypothetical 10% increase in the market price of our common stock (\$15.87 based on the \$14.43 market price of our stock at June 30, 2011) on which the June 30, 2011 valuation was based, the value would have increased by \$30.2 million. Such increase would have been reflected as additional loss on revaluation of the warrant liability in our statement of operations.

Item 4. *Controls and Procedures*

Evaluation of Disclosure Controls and Procedures

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in the reports that we file or submit under the Securities and Exchange Act of 1934 is (1) recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms and (2) accumulated and communicated to our management, including our principal executive officer and principal financial officer, to allow timely decisions regarding required disclosure.

Table of Contents

As of June 30, 2011, our management, with the participation of our principal executive officer and principal financial officer, evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities and Exchange Act of 1934). Our management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving their objectives, and management necessarily applies its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Our principal executive officer and principal financial officer have concluded based upon the evaluation described above that, as of June 30, 2011, our disclosure controls and procedures were not effective at the reasonable assurance level, due to a material weakness in internal control over financial reporting described below.

Changes in Internal Control over Financial Reporting

During the three months ended June 30, 2011, there have been no changes in our internal control over financial reporting, as such term is defined in Rules 13a-15(f) and 15(d)-15(f) promulgated under the Securities Exchange Act of 1934, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting, other than as described below.

As previously described in Item 9A Controls and Procedures in our Annual Report on Form 10-K filed for the year ended December 31, 2010, our management identified a material weakness in internal control over financial reporting as of December 31, 2009 and which persisted on December 31, 2010. Specifically, our management concluded there was a deficiency in the company's internal control over financial reporting relating to the technical expertise and review over the accounting for complex, non-routine transactions that could result in a material misstatement of the consolidated financial statements that would not be prevented or detected on a timely basis. In response to this material weakness, our management, with the input, oversight, and support of the Audit Committee, identified and took the following steps beginning during the second half of 2010 and all of which efforts continued into the second quarter of 2011: non-ordinary course transactions are considered and evaluated by senior finance management; we continue to prepare accounting position papers for all complex transactions; and, where appropriate, management seeks the advice of outside consultants on accounting matters related to the application of U.S. GAAP to complex, non-ordinary course transactions and in other instances as warranted.

PART II

Item 1. Legal Proceedings

In the ordinary course of business, we are from time to time involved in lawsuits, claims, investigations, proceedings, and threats of litigation relating to intellectual property, commercial arrangements and other matters. While the outcome of these proceedings and claims cannot be predicted with certainty, there are no matters, as of June 30, 2011, that, in the opinion of management, might have a material adverse effect on our financial position, results of operations or cash flows.

Item 1A. Risk Factors

Investment in our securities involves a high degree of risk. Our Annual Report on Form 10-K for the year ended December 31, 2010, which was filed with the SEC on March 16, 2011, contains numerous risk factors relating to our business and operations, our intellectual property, clinical trials, regulatory matters, our dependence on third parties, our industry and our common stock.

The following risk factors are either new or have changed materially from those set forth in our Annual Report on Form 10-K for the year ended December 31, 2010. You should carefully review the risks involved and those described in our Annual Report on Form 10-K and in other reports we file with the Securities and Exchange Commission in evaluating our business.

We will require substantial additional resources to fund our operations and to develop our product candidates. If we cannot find additional capital resources, we will have difficulty in operating as a going concern and growing our business.

We currently operate with limited resources. At June 30, 2011, we had cash and cash equivalents of approximately \$131.4 million. We believe that our current resources will be sufficient to fund our projected operations for the next twelve months, which contemplates not only working capital and general corporate needs but also the filing of an NDA requesting approval to market and sell AMR101 for the indication studied in the MARINE trial (for the treatment of patients with very high triglycerides) in the United States, commercial preparation of AMR101 and the initiation of a clinical outcomes study. In order to commercialize AMR101, we must either develop a sales, marketing and distribution infrastructure or collaborate with third parties that have such experience. We plan to consider collaboration opportunities with larger pharmaceutical companies for the launch, marketing and sale of AMR101. Although we are in discussions with pharmaceutical companies

regarding such a collaboration, there can be no assurance that these

Table of Contents

discussions will result in any such transaction. Accordingly, we are also developing plans to launch, market and sell AMR101 in the United States on our own. If we do not enter into a strategic collaboration in connection with the launch, marketing and sale of AMR101, we will need to raise additional capital to support these efforts. In order to obtain a separate indication for AMR101 based on the ANCHOR trial results, our SPA with the FDA requires that we have a cardiovascular outcomes study substantially underway at the time of the NDA submission. The final results of an outcomes study are not required for FDA approval of the broader indication and an outcomes study is not required for the indication being studied in the MARINE trial. We are in the late stages of designing a cardiovascular outcomes study to support the indication studied in the ANCHOR trial. Such outcomes study may also seek additional indications for AMR101 beyond the indication studied in the ANCHOR trial, such as an indication for prevention of cardiac events, although there can be no assurance as to whether any such outcomes study we may conduct will be designed support to any such indication. We have received proposals from CROs to support us in the conduct of the outcomes study. We expect in the third quarter of 2011 to enter into an agreement with a CRO to commence the outcomes study and we will seek to have the outcomes study at least half enrolled by the end of 2012. We project that the outcomes study will cost between \$100 and \$125 million over the course of an anticipated six year study period. We will require additional funds to complete these clinical activities.

If we seek to raise additional funds, we may do so through the sale of additional equity, debt or convertible securities. The terms of any financings may be dilutive to, or otherwise adversely affect, holders of our outstanding securities. There can be no assurance that additional financing will be available in amounts or on terms acceptable to us, if at all. Any inability to obtain additional funds when needed would have a material adverse effect on our business and on our ability to operate on an ongoing basis.

Our future capital requirements will depend on many factors, including:

whether or not we enter into a strategic collaboration in connection with the launch, marketing and sale of AMR101;

whether or not we elect to commence an outcomes study to support the filing of an NDA for the clinical indication evaluated in the ANCHOR trial;

time and costs involved in obtaining regulatory approvals for AMR101;

number of additional product candidates we may pursue;

costs involved in filing and prosecuting patent applications and enforcing or defending patent claims; and

the costs associated with commercializing our product candidates if they receive regulatory approval, including the cost and timing of developing sales and marketing capabilities, or entering into strategic collaboration with others relating to the commercialization of our product candidates.

If we do not enter into a collaboration agreement as described above, or if adequate funds are not available to us in amounts or on terms acceptable to us or on a timely basis, or at all, we may be required to terminate or delay our development efforts in support of our product candidates or delay our establishment of sales and marketing capabilities or other activities that may be necessary to commercialize AMR101 in the event we obtain regulatory approval for this product candidate.

In order to commercialize any future product that is approved for marketing, we may need to find a collaborative partner to help with marketing and sales.

In order to commercialize AMR101, we must either develop a sales, marketing and distribution infrastructure or collaborate with third parties that have such experience. We plan to consider collaboration opportunities with larger pharmaceutical companies for the launch, marketing and sale of AMR101. If we do complete such a collaboration agreement, we will be reliant on one or more of these strategic partners to generate revenue on our behalf. In the event that we are not successful in finding a suitable partner, we may choose to commercialize AMR101 ourselves. This would require that we build a substantial commercialization infrastructure in order to compete with larger companies with established marketing and sales capabilities.

We may not be successful in finding a collaborative partner to help market and sell our products, or may be delayed in doing so, in which case we would not receive revenue or royalties on the timeframe and to the extent that we currently anticipate. We face significant competition in seeking appropriate collaborators and these collaborations are complex and time-consuming to negotiate and document. We may not be able to negotiate collaborations on acceptable terms, or at all. If that were to occur, we may have to curtail the development of a particular product candidate, reduce or delay its development program or one or more of our other development programs, delay its potential commercialization or reduce the scope of our sales or marketing activities, or increase our expenditures and undertake development or commercialization activities at our own expense. If we elect to increase our expenditures to fund development or commercialization activities on our own, we will need to obtain additional capital, which may not be available

Table of Contents

to us on acceptable terms, or at all. If we cannot raise sufficient funds, we will not be able to bring our product candidates to market and generate product revenue.

For example, in October 2009, we announced our heightened strategic and operating focus on cardiovascular disease and our cessation of research and development of product candidates to treat central nervous system disorders. Subsequent to October 2009, we did not receive any acceptable offers to acquire, out-license or otherwise continue the development of any of these product candidates to treat central nervous system disorders.

We may experience delays in the initiation of our cardiovascular outcomes study, or such outcomes study may take longer and cost more than we expect. The FDA may not approve our request to consider the indication studied in the ANCHOR trial in conjunction with the FDA's review of the indication studied in the MARINE trial.

In order to obtain a separate indication for AMR101 based on the ANCHOR trial results, our SPA with the FDA requires that we have a cardiovascular outcomes study substantially underway at the time of the NDA submission. We are in the late stages of designing a cardiovascular outcomes study to support the indication studied in the ANCHOR trial. Such outcomes study may also seek additional indications for AMR101 beyond the indication studied in the ANCHOR trial, such as an indication for prevention of cardiac events, although there can be no assurance as to whether any such outcomes study we may conduct will be designed support to any such indication. We have received proposals from CROs to support us in the conduct of the outcomes study. We expect in the third quarter of 2011 to enter into an agreement with a CRO to commence the outcomes study and we will seek to have the outcomes study at least half enrolled by the end of 2012. We project that the outcomes study will cost between \$100 and \$125 million over the course of an anticipated six year study period.

In the event we experience delays in initiating or achieving substantial enrolment for such an outcomes study, our filing of a supplemental NDA (sNDA) seeking approval of an indication based on the ANCHOR trial results will be delayed.

In accordance with our SPA for the ANCHOR trial, we currently intend to file a sNDA seeking approval of the indication studied in the ANCHOR trial once we have a cardiovascular outcomes study substantially underway. The sNDA cannot be filed until after both the initially submitted NDA is approved and the cardiovascular outcomes study is substantially underway. However, as part of our interaction with the FDA regarding our NDA for the indication studied in the MARINE trial, we may explore whether there is an opportunity for the indication studied in the ANCHOR trial to be considered in conjunction with the FDA's review of the indication studied in the MARINE trial. However, there can be no assurance that the FDA will approve such an approach.

Even if we obtain marketing approval for AMR101 in the United States, there can be no assurance as to the final indication approved by the FDA, and the actual number of patients with the condition included in such approved indication may be smaller than we anticipate.

There can be no assurance as to the final indication approved by the FDA in the event that marketing approval is obtained. Even if marketing approval is obtained, the number of actual patients with the condition included in such approved indication may be smaller than we anticipate. Even if we obtain marketing approval, the FDA may impose restrictions on the product's conditions for use, distribution or marketing and in some cases may impose ongoing requirements for post-market surveillance, post-approval studies or clinical trials. If any such approved indication is more narrow than we anticipate, the market potential for our product candidate would suffer.

The FDA and other regulatory agencies strictly regulate the promotional claims that may be made about prescription products. If we are found to have improperly promoted off-label uses, we may become subject to significant liability.

The FDA and other regulatory agencies strictly regulate the promotional claims that may be made about prescription products. In particular, a product may not be promoted for uses that are not approved by the FDA or such other regulatory agencies as reflected in the product's approved labeling. If we receive marketing approval for AMR101, physicians may nevertheless prescribe AMR101 to their patients in a manner that is inconsistent with the approved label. If we are found to have promoted such off-label uses, we may become subject to significant liability. The federal government has levied large civil and criminal fines against companies for alleged improper promotion and has enjoined several companies from engaging in off-label promotion. The FDA has also requested that companies enter into consent decrees or permanent injunctions under which specified promotional conduct is changed or curtailed.

We may become subject to product liability claims as a result of our prior sales and marketing activities related to Permax.

Amarin was responsible for the sales and marketing of Permax® (pergolide mesylate), as an adjunctive treatment for Parkinson's disease, from May 2001 until February 2004. On May 17, 2001, Amarin acquired the U.S. sales and marketing rights to Permax from Elan Corporation, or Elan. An affiliate of Elan had previously obtained the licensing rights to Permax from Eli Lilly and Company in

Table of Contents

1993. Eli Lilly originally obtained approval for Permax on December 30, 1988, and has been responsible for the manufacture and supply of Permax since that date. On February 25, 2004, Amarin sold its U.S. subsidiary, Amarin Pharmaceuticals, Inc., including the rights to Permax, to Valeant Pharmaceuticals.

On March 29, 2007, the FDA announced that the manufacturers of pergolide drug products would voluntarily remove these drug products, including Permax, from the market because of the risk of serious damage to patients' heart valves. Further information about the removal of Permax and other pergolide drug products is available on the FDA's website.

Six cases alleging claims related to cardiac valvulopathy and Permax were filed in April 2008 in the United States and currently remain pending. Eli Lilly, Valeant, Amarin Pharmaceuticals (sold to Valeant in 2004 as described above) and unidentified parties were named as defendants in these cases. Amarin was never named as a defendant or served with the complaints from these cases. We understand that, as of the date of this Quarterly Report on Form 10-Q, all of these cases have either settled or been dismissed.

We may become subject to liability in connection with the wind-down of our EN101 program.

In 2007, we purchased Ester Neurosciences Limited, an Israeli pharmaceutical company, and its lead product candidate, EN101, an AChE-R mRNA inhibitor for the treatment of myasthenia gravis, or MG, a debilitating neuromuscular disease. In connection with the acquisition, we assumed a license to certain intellectual property assets related to EN101 from the Yissum Research Development Company of The Hebrew University of Jerusalem.

In June 2009, in keeping with our decision to re-focus our efforts on developing improved treatments for cardiovascular disease and cease development of all product candidates outside of our cardiovascular disease focus, we amended the terms of our acquisition agreement with the original shareholders of Ester. Under the terms of this amendment, Amarin was released from all research and development diligence obligations contained in the original agreement and was authorized to seek a partner for EN101. The amendment agreement also provided that any future payment obligations payable by Amarin to the former shareholders of Ester would be made only out of income received from potential partners. In connection with this amendment agreement, in August 2009 we issued 1,315,789 ordinary shares to the former Ester shareholders. Under the terms of this amendment agreement, the former Ester shareholders have the option of reacquiring the original share capital of Ester if we are unable to successfully partner EN101.

Following our decision to cease development of EN101, Yissum terminated its license agreement with Amarin. In June 2011 the Yissum announced that it had entered into such a license agreement with BiolineRX Ltd.

We have received correspondence on behalf of the former shareholders of Ester asserting that Amarin is in breach of its amended agreement due to the fact that the Yissum terminated its license and Amarin failed to return shares of Ester, and assets relating to EN101, to the shareholders, as was required under certain circumstances under the amended agreement. We do not believe these circumstances constitute a breach of the amended agreement, but there can be no assurance as to the outcome of this dispute.

We currently have no issued patents that directly apply to our intended use of AMR101 and there can be no assurance that our patent applications that apply to such use will be issued.

We currently have no issued patents that directly apply to the use of AMR101 for hypertriglyceridemia, hyperlipidemia or cardiovascular therapy in the U.S. or Europe. We have filed and we are prosecuting numerous patent applications. These applications are in nine patent families and include many independent claims and dependent claims. Our patent applications have claims derived from the novel findings from the MARINE and ANCHOR trials. If granted, we believe that many of these patents could have expiration dates in 2030. However, no assurance can be given that any of these patents will be granted or, if they grant, that they will protect AMR101 from infringement through the expiration of patent life. We cannot be certain what commercial value any granted patent will provide to us.

The patent process is lengthy, with first office actions often occurring years after the initial filing. As a result, many of our patent applications are unlikely to be reviewed by the patent office during 2011. Our patent application containing claims for the MARINE indication was selected to enter the Peer to Patent process. The Peer-to-Patent process is a joint project between the New York Law School and the U.S. Patent and Trademark Office. The purpose of this process is to allow the public to comment on patent applications to prove that organized public participation can improve the quality of issued patents. In exchange for participating in the process, the MARINE application was accelerated to its first office action in the second quarter of 2011. This Peer-to-Patent review process, however, is not necessarily shorter than that of typical patent prosecution and does not change the likelihood of whether a patent is granted. Many of our patent applications are not likely to be reviewed by the patent office during 2011. The process to getting a patent granted can be lengthy and claims initially submitted are often modified in order to satisfy the requirements of the patent office. This process includes written and public communication with the patent office.

The process can also include direct discussions with the patent examiner. There can be no assurance that the patent office will accept our arguments with respect to any

Table of Contents

patent application or with respect to any claim therein. The timing of the patent review process is independent of and has no effect on the timing of the FDA's review of our NDA.

Item 6. Exhibits

The following exhibits are incorporated by reference or filed as part of this report.

Exhibit	
Number	
10.1	API Supply Agreement, dated as of May 25, 2011, by and between Amarin Pharmaceuticals Ireland Ltd. and Equateq Limited
10.2	API Commercial Supply Agreement, dated as of May 25, 2011, by and between Amarin Pharmaceuticals Ireland Ltd. and Chemport Inc.
10.3	Irrevocable License Agreement dated as of April 11, 2011, as amended by the First Amendment to Irrevocable License Agreement dated as of May 9, 2011, each by and between Amarin Pharmaceuticals Ireland Ltd. and Bedminster 2 Funding, LLC.
