PART I. FINANCIAL INFORMATION

When we refer to we, our, and us in this report, we mean Huntington Bancshares Incorporated and our consolidated subsidiaries, unless the context indicates that we refer only to the parent company, Huntington Bancshares Incorporated. When we refer to the Bank in this report, we mean our only bank subsidiary, The Huntington National Bank, and its subsidiaries.

Item 2: Management s Discussion and Analysis of Financial Condition and Results of Operations INTRODUCTION

We are a multi-state diversified regional bank holding company organized under Maryland law in 1966 and headquartered in Columbus, Ohio. Through the Bank, we have 147 years of serving the financial needs of our customers. Through our subsidiaries, we provide full-service commercial and consumer banking services, mortgage banking services, automobile financing, equipment leasing, investment management, trust services, brokerage services, customized insurance service programs, and other financial products and services. Our over 700 banking offices are located in Indiana, Kentucky, Michigan, Ohio, Pennsylvania, and West Virginia. Selected financial services and other activities are also conducted in various other states. International banking services are available through the headquarters office in Columbus, Ohio and a limited purpose office located in the Cayman Islands and another limited purpose office located in Hong Kong. Our foreign banking activities, in total or with any individual country, are not significant.

This MD&A provides information we believe necessary for understanding our financial condition, changes in financial condition, results of operations, and cash flows. The MD&A included in our 2012 Form 10-K should be read in conjunction with this MD&A as this discussion provides only material updates to the 2012 Form 10-K. This MD&A should also be read in conjunction with the financial statements, notes and other information contained in this report.

Our discussion is divided into key segments:

Executive Overview Provides a summary of our current financial performance and business overview, including our thoughts on the impact of the economy, legislative and regulatory initiatives, and recent industry developments. This section also provides our outlook regarding our expectations for the next several quarters.

Discussion of Results of Operations Reviews financial performance from a consolidated Company perspective. It also includes a Significant Items section that summarizes key issues helpful for understanding performance trends. Key consolidated average balance sheet and income statement trends are also discussed in this section.

Risk Management and Capital Discusses credit, market, liquidity, operational, and compliance risks, including how these are managed, as well as performance trends. It also includes a discussion of liquidity policies, how we obtain funding, and related performance. In addition, there is a discussion of guarantees and / or commitments made for items such as standby letters of credit and commitments to sell loans, and a discussion that reviews the adequacy of capital, including regulatory capital requirements.

Business Segment Discussion Provides an overview of financial performance for each of our major business segments and provides additional discussion of trends underlying consolidated financial performance.

Additional Disclosures Provides comments on important matters including forward-looking statements, critical accounting policies and use of significant estimates, recent accounting pronouncements and developments, and acquisitions.

A reading of each section is important to understand fully the nature of our financial performance and prospects.

5

EXECUTIVE OVERVIEW

Summary of 2013 Third Quarter Results

For the quarter, we reported net income of \$178.5 million, or \$0.20 per common share, compared with \$150.7 million, or \$0.17 per common share, in the prior quarter (see Table 1).

Fully-taxable equivalent net interest income was \$431.5 million for the quarter, unchanged from the prior quarter. The results reflected a \$0.1 billion increase in average earning assets, as well as an additional day in the quarter. These were offset by a 4 basis point decrease in the net interest margin. The primary items affecting the net interest margin were a 4 basis point negative impact from the mix and yield of earning assets, a 3 basis point negative impact of the \$750 million of debt issued during the quarter, and a 3 basis point positive impact from lower cost of deposits.

The provision for credit losses decreased \$13.3 million, or 54%, from the prior quarter. This quarter, we introduced an enhanced allowance methodology, which incorporates an enhanced commercial risk rating system. The combination of the enhanced methodology and continued improvement in overall asset quality resulted in a reduction in the ACL to loans ratio of 1.72%, compared to 1.86% in the prior quarter. The ACL as a percentage of period-end NALs increased 6 percentage points to 220%. NALs declined by \$30.4 million, or 8%, to \$333.1 million, or 0.78% of total loans. The decreases primarily reflected meaningful improvement in both C&I and CRE NALs.

Noninterest income increased \$1.8 million, or 1%, from the prior quarter. The increase reflected the \$8.0 million, or 31%, increase in other noninterest income, primarily related to fees associated with commercial loan activity, and the \$4.9 million, or 7%, increase in service charges on deposit accounts, resulting from household and commercial relationship growth. These were offset by a \$10.0 million, or 30%, decrease in mortgage banking income due to lower origination volume, and the \$3.0 million, or 15%, decrease in brokerage income due to typical seasonal trends.

Noninterest expense decreased \$22.5 million, or 5%, from the prior quarter. The decrease reflected the \$34.5 million, or 13%, decrease in personnel costs, which included a significant item of \$33.9 million from the pension curtailment gain and \$6.6 million of branch consolidation and severance expense. These were partially offset by a \$7.9 million, or 29%, increase in net occupancy, and a \$3.2 million, or 13%, increase in equipment, which combined included a significant item of \$9.5 million for branch consolidation and facilities optimization related costs. In addition, outside services included a significant item of \$0.5 million for branch consolidation and facilities optimization related costs.

The tangible common equity to tangible asset ratio increased to 9.02% from 8.78% at the end of the prior quarter, resulting primarily from earnings retention. Our Tier 1 common risk-based capital ratio at quarter end was 10.85%, up from 10.71% at the end of the prior quarter. The regulatory Tier 1 risk-based capital ratio at September 30, 2013 was 12.36%, up from 12.24% at June 30, 2013. All capital ratios were impacted by the repurchase of 2.0 million common shares over the quarter at an average price per share of \$8.18.

Business Overview

General

Our general business objectives are: (1) grow net interest income and fee income, (2) increase cross-sell and share-of-wallet across all business segments, (3) improve efficiency ratio, (4) continue to strengthen risk management, including sustained improvement in credit metrics, and (5) maintain strong capital and liquidity positions.

Our third-quarter results demonstrated that our unique products and services are driving robust organic customer acquisition across our commercial and consumer customer base, while delivering stable returns to shareholders. Through our disciplined investments in fee-income businesses in conjunction with prudent expense management, we have been able to deliver modest positive operating leverage for the first nine months of the year.

During the quarter, we successfully launched our consumer credit card product. The third quarter was also a time of continuing household growth, particularly within our in-store branches, and marked a return to stability for our commercial real estate loan portfolio. Our performance benefited from ongoing improvement within our core Midwestern economies. We also made progress in managing expenses, including one-time savings attributable to pension curtailment, rightsizing of some investments, and the consolidation of 22 branch locations.

Economy

While we are optimistic about continuing indicators of economic improvement supporting our performance for the next several quarters, we must face the headwinds related to the yield curve, regulatory environment, and ongoing uncertainty in Washington.

6

Legislative and Regulatory

Regulatory reforms continue to be issued, which impose additional restrictions on current business practices. Recent items affecting us include the Federal Reserve s Capital Plan Review and the recently issued final Basel III capital rule.

Capital Plans Rule / Supervisory and Company-Run Stress Test Requirements The Federal Reserve issued two interim final rules on September 24, 2013, that are intended to clarify how we should incorporate the Basel III regulatory capital reforms into our capital projections during the next cycle of capital plan submissions and stress tests. The planning horizon for the next capital planning and stress testing cycle encompasses the 2013 fourth quarter through the 2015 fourth quarter. Rules to implement the Basel III capital reforms in the United States were finalized in July 2013, and will be phased-in beginning in 2015 for us under the standardized approach. As such, the next CCAR cycle, which began October 1, 2013, overlaps with the implementation of the Basel III capital reforms based on the required 9-quarter capital projections. The interim final rules clarify that banking organizations with \$50 billion or more in total consolidated assets, including us, must incorporate the revised capital framework into the capital planning projections and into the stress tests required under the Dodd-Frank Act using the transition paths established in the Basel III final rule. The rule also clarifies that for the upcoming cycle, capital adequacy at large banking organizations, including us, would continue to be assessed against a minimum 5 percent tier 1 common ratio calculated in the same manner as under previous stress tests and capital plan submissions, ensuring consistency with those previous exercises. The interim final rules became effective upon issuance, but the Federal Reserve will accept comments on the rules through November 25, 2013.

Basel III Capital rules for U.S. banking organizations On July 2, 2013, the Federal Reserve voted to adopt final Basel III capital rules for U.S. Banking organizations. The final rules establish an integrated regulatory capital framework and will implement in the United States the Basel III regulatory capital reforms from the Basel Committee on Banking Supervision and certain changes required by the Dodd-Frank Act. Under the final rule, minimum requirements will increase for both the quantity and quality of capital held by banking organizations. Consistent with the international Basel framework, the final rule includes a new minimum ratio of common equity tier 1 capital (Tier I Common) to risk-weighted assets and a Tier 1 Common capital conservation buffer of 2.5% of risk-weighted assets that will apply to all supervised financial institutions. The rule also raises the minimum ratio of tier 1 capital to risk-weighted assets and includes a minimum leverage ratio of 4% for all banking organizations. These new minimum capital ratios will become effective for us on January 1, 2015, and will be fully phased-in on January 1, 2019.

Following are the Basel III regulatory capital levels that we must satisfy to avoid limitations on capital distributions and discretionary bonus payments during the applicable transition period, from January 1, 2015 until January 1, 2019:

	Basel III Regulatory Capital Levels							
	January 1,	January 1,	January 1,	January 1,	January 1,			
	2015	2016	2017	2018	2019			
Tier 1 Common	4.5%	5.125%	5.75%	6.375%	7.0%			
Tier 1 risk-based capital ratio	6.0%	6.625%	7.25%	7.875%	8.5%			
Total risk-based capital ratio	8.0%	8.625%	9.25%	9.875%	10.5%			

The final rule emphasizes Tier 1 Common capital, the most loss-absorbing form of capital, and implements strict eligibility criteria for regulatory capital instruments. The final rule also improves the methodology for calculating risk-weighted assets to enhance risk sensitivity. Banks and regulators use risk weighting to assign different levels of risk to different classes of assets.

We have evaluated the impact of the Basel III final rule on our regulatory capital ratios and estimate a reduction of approximately 60 basis points to our Basel I Tier I Common risk-based capital ratio based on our June 30, 2013 balance sheet composition. The estimate is based on management s current interpretation, expectations, and understanding of the final U.S. Basel III rules. We anticipate that our capital ratios, on a Basel III basis, will continue to exceed the well capitalized minimum capital requirements. We are evaluating options to mitigate the capital impact of the final rule prior to its effective implementation date.

Approximately \$50.0 million of our Tier 1 risk-based capital of \$6.0 billion at September 30, 2013 consisted of the outstanding Class C preferred securities of our REIT subsidiary, Huntington Preferred Capital, Inc. (HPCI). Based on our review of the Basel III final rule, it is likely that when Basel III becomes effective, the HPCI Class C preferred securities will no longer constitute Tier 1 capital for us or the Bank. In the event we determine that a regulatory capital event has occurred, based on an opinion of counsel rendered by a law firm experienced in such matters, HPCI would have the right to redeem the outstanding Class C preferred securities. In the event HPCI redeems the Class C preferred securities, holders of such securities will be entitled to receive the redemption price of \$25.00 per share plus accrued and unpaid dividends on such shares. The redemption price may differ from the redemption date market price of the Class C preferred securities. There can be no assurance as to if or when HPCI would redeem the Class C preferred securities.

Table of Contents

Expectations

Net interest income is expected to modestly grow over the next several quarters. We anticipate an increase in earning assets as total loans modestly grow and investment securities increase in preparation for the new liquidity rules. However, those benefits to net interest income are expected to be partially offset by continued modest downward pressure on NIM until the short end of the yield curve begins to move higher. Full-year 2013 NIM is not expected to fall below the mid 3.30% s. While we are maintaining a disciplined approach to loan pricing, asset yields remain under pressure, and that is partially offset by the continued deposit repricing and mix shift.

The C&I portfolio is expected to see growth consistent with an anticipated increase in customer activity. Our C&I loan pipeline remains robust with much of this reflecting the positive impact from our investments in specialized commercial verticals, focused OCR sales process, and continued support of middle market and small business lending. Automobile loan originations remain strong, and we currently do not anticipate any automobile securitizations in the near future. Residential mortgages, home equity, and CRE loan balances are expected to increase modestly.

We anticipate the increase in total loans will outpace growth in total deposits. This reflects our continued focus on the overall cost of funds, as well as the continued shift towards low- and no-cost demand deposits and money market deposit accounts.

Noninterest income, when compared to recent levels, is expected to be relatively flat, excluding the impact of any automobile loan sales, any net MSR activity, and typical first quarter seasonality.

Expenses, excluding the \$17 million of Significant Items, are expected to modestly increase due to higher depreciation, personnel, occupancy, and equipment expense related to our continued modest pace of investments. We continue to evaluate additional cost saving opportunities, and an additional \$6 million of branch consolidation expense is expected in the 2013 fourth quarter from previously announced actions. We remain committed to posting positive operating leverage for the 2013 full year.

NPAs are expected to show continued improvement. This quarter, NCOs were at the high end of our expected normalized range of 35 to 55 basis points. The level of provision for credit losses was below our long-term expectation, and we continue to expect some quarterly volatility.

The effective tax rate for 2013 is expected to be in the range of 25% to 27%, primarily reflecting the impacts of tax-exempt income, tax-advantaged investments, and general business credits.

8

DISCUSSION OF RESULTS OF OPERATIONS

This section provides a review of financial performance from a consolidated perspective. It also includes a Significant Items section that summarizes key issues important for a complete understanding of performance trends. Key Unaudited Condensed Consolidated Balance Sheet and Unaudited Condensed Statement of Income trends are discussed. All earnings per share data are reported on a diluted basis. For additional insight on financial performance, please read this section in conjunction with the Business Segment Discussion.

⁽¹⁾ Comparisons for presented periods are impacted by a number of factors. Refer to the Significant Items for additional discussion regarding these key factors.

⁽²⁾ Net income excluding expense for amortization of intangibles for the period divided by average tangible common shareholders equity. Average tangible common shareholders equity equals average total common shareholders equity less average intangible assets and goodwill. Expense for amortization of intangibles and average intangible assets are net of deferred tax liability, and calculated assuming a 35% tax rate.

⁽³⁾ On a fully-taxable equivalent (FTE) basis assuming a 35% tax rate.

⁽⁴⁾ Noninterest expense less amortization of intangibles divided by the sum of FTE net interest income and noninterest income excluding securities gains.

⁽¹⁾ Comparisons for presented periods are impacted by a number of factors. Refer to the Significant Items for additional discussion regarding these key factors.

⁽²⁾ On a fully taxable equivalent (FTE) basis assuming a 35% tax rate.

Significant Items

Definition of Significant Items

From time-to-time, revenue, expenses, or taxes are impacted by items judged by us to be outside of ordinary banking activities and / or by items that, while they may be associated with ordinary banking activities, are so unusually large that their outsized impact is believed by us at that time to be infrequent or short-term in nature. We refer to such items as Significant Items. Most often, these Significant Items result from factors originating outside the company; e.g., regulatory actions / assessments, windfall gains, changes in accounting principles, one-time tax assessments / refunds, litigation actions, etc. In other cases, they may result from our decisions associated with significant corporate actions outside of the ordinary course of business; e.g., merger / restructuring charges, recapitalization actions, goodwill impairment, etc.

Even though certain revenue and expense items are naturally subject to more volatility than others due to changes in market and economic environment conditions, as a general rule volatility alone does not define a Significant Item. For example, changes in the provision for credit losses, gains / losses from investment activities, asset valuation writedowns, etc., reflect ordinary banking activities and are, therefore, typically excluded from consideration as a Significant Item.

We believe the disclosure of Significant Items provides a better understanding of our performance and trends to ascertain which of such items, if any, to include or exclude from an analysis of our performance; i.e., within the context of determining how that performance differed from expectations, as well as how, if at all, to adjust estimates of future performance accordingly. To this end, we adopted a practice of listing Significant Items in our external disclosure documents; e.g., earnings press releases, investor presentations, Forms 10-Q and 10-K.

Significant Items for any particular period are not intended to be a complete list of items that may materially impact current or future period performance.

Significant Items Influencing Financial Performance Comparisons

Earnings comparisons were impacted by the Significant Items summarized below:

- 1. **Pension Curtailment Gain.** During the 2013 third quarter, a \$33.9 million pension curtailment gain was recorded in personnel costs. This resulted in a positive impact of \$0.03 per common share for both the quarterly and year-to-date basis.
- 2. **Franchise Repositioning Related Expense.** During the 2013 third quarter, \$16.6 million of franchise repositioning related expense was recorded. This resulted in a negative impact of \$0.01 per common share for both the quarterly and year-to-date basis.
- 3. **Litigation Reserve.** During the 2012 first quarter, \$23.5 million of additions to litigation reserves were recorded as other noninterest expense. This resulted in a negative impact of \$0.02 per common share in 2012 for both the quarterly and year-to-date basis.
- 4. **Bargain Purchase Gain.** During the 2012 first quarter, an \$11.4 million bargain purchase gain associated with the FDIC-assisted Fidelity Bank acquisition was recorded in noninterest income. This resulted in a positive impact of \$0.01 per common share for both the quarterly and year-to-date basis.
- 5. **State deferred tax asset valuation allowance adjustment.** During the 2012 third quarter, a valuation allowance of \$19.5 million (net of tax) was released for the portion of the deferred tax asset and state net operating loss carryforwards expected to be realized. This resulted in a positive impact of \$0.02 per common share for both the quarterly and year-to-date basis.

The following table reflects the earnings impact of the above-mentioned Significant Items for periods affected by this Results of Operations discussion:

2013 Third Quarter versus 2012 Third Quarter

Fully-taxable equivalent net interest income decreased \$4.1 million, or 1%, from the year-ago quarter. This reflected a 4 basis point decrease in the FTE net interest margin to 3.34% as average earning assets were essentially unchanged with 5% loan growth offset by the planned reduction in investment securities. The primary items impacting the decrease in the NIM were:

16 basis point negative impact from the mix and yield of earning assets primarily reflecting a decrease in consumer loan yields. Partially offset by:

15 basis point positive impact from the mix and yield of deposits reflecting the strategic focus on changing the funding sources from higher rate time deposits to no cost demand deposits and low cost money market deposits.

Average earning assets decreased \$0.1 billion, or less than 1% from the year-ago quarter, driven by:

\$1.5 billion, or 79%, decrease in loans held for sale, reflecting the impact of our intended securitization of automobile loans in the 2012 fourth quarter.

\$0.8 billion, or 14%, decrease in average CRE loans. This decrease reflected continued runoff of the noncore portfolio and a slight decrease of the core portfolio as acceptable returns for new core originations were balanced against internal concentration limits and increased competition for projects sponsored by high quality developers.

0.5 billion, or 5%, decrease in securities. Partially offset by:

\$2.0 billion, or 49%, increase in average on balance sheet automobile loans, as originations remained strong and our investments in the Northeast and upper Midwest continued to grow as planned.

\$0.7 billion, or 4%, increase in average C&I loans and leases. This reflected the continued growth within the middle market healthcare vertical, equipment finance, and dealer floorplan.

16

Table of Contents

Average noninterest bearing deposits increased \$0.8 billion, or 6%, while average interest-bearing liabilities decreased \$1.1 billion, or 3%, from the 2012 third quarter, primarily reflecting:

\$2.0 billion, or 32%, decrease in average core certificates of deposit due to the strategic focus on changing the funding sources to no cost demand deposits and low cost money markets deposits.

Partially offset by:

\$1.2 billion, or 8%, increase in money market deposits reflecting the strategic focus on increased share of wallet and the customer s, both consumer and commercial, preference for increased liquidity.

2013 Third Quarter versus 2013 Second Quarter

Compared to the 2013 second quarter, fully-taxable equivalent net interest income was unchanged, reflecting a \$0.1 billion increase in average earnings assets, partially offset by a 4 basis point decrease in NIM. The primary items affecting the NIM were a 4 basis point negative impact from the mix and yield of earning assets and a 3 basis point negative impact of the \$750.0 million of long-term debt issued during the quarter, partially offset by the 3 basis point benefit from lower cost deposits and increased equity.

17

⁽¹⁾ FTE yields are calculated assuming a 35% tax rate.

Loan, lease, and deposit average rates include the impact of applicable derivatives, non-deferrable fees, and amortized deferred fees.

⁽³⁾ For purposes of this analysis, nonaccrual loans are reflected in the average balances of loans.

2013 First Nine Months versus 2012 First Nine Months

Fully-taxable equivalent net interest income for the first nine-month period of 2013 was unchanged from the comparable year-ago period. This reflected the benefit of a \$0.4 billion, or 1%, increase in average total earning assets. The fully-taxable equivalent net interest margin decreased to 3.38% from 3.40%. The increase in average earning assets reflected:

\$1.2 billion, or 3%, increase in average total loans and leases. Partially offset by:

\$0.6 billion, or 50%, decrease in loans held for sale.

The following table details the change in our reported loans and deposits:

Table 8 Average Loans/Leases and Deposits 2013 First Nine Months vs. 2012 First Nine Months

The \$1.2 billion, or 3%, increase in average total loans and leases primarily reflected:

\$1.3 billion, or 8%, increase in the average C&I portfolio, primarily reflecting a combination of factors, including growth across multiple business lines including the healthcare vertical, dealer floorplan, and equipment finance.

0.9 billion, or 19%, increase in the average automobile portfolio as originations remained strong. Partially offset by:

\$0.8 billion, or 14%, decline in the average CRE loans. This reflected continued runoff of the noncore and core portfolios as we balanced acceptable returns for new core origination against internal concentration limits and increased competition, particularly pricing, for high quality developers and projects.

19

Table of Contents

The \$1.2 billion, or 3%, increase in average total deposits reflected:

\$1.7 billion, or 12%, increase in money market deposits.

\$0.9 billion, or 5%, increase in total demand deposits. Partially offset by:

\$1.7 billion, or 26%, decline in core certificates of deposit.

20

Provision for Credit Losses

(This section should be read in conjunction with the Credit Risk section.)

The provision for credit losses is the expense necessary to maintain the ALLL and the AULC at levels appropriate to absorb our estimate of inherent credit losses in the loan and lease portfolio and the portfolio of unfunded loan commitments and letters-of-credit.

The provision for credit losses for the 2013 third quarter declined \$13.3 million, or 54%, from the prior quarter and declined \$25.6 million, or 69%, from the year-ago quarter. The 2013 third quarter included the implementation of enhancements to our commercial allowance for loan and lease losses (ALLL) model. In addition, as a result of a review of the existing consumer portfolios, the current quarter includes \$13.1 million of Chapter 7 bankruptcy-related losses that were not identified in the 2012 third quarter implementation of the OCC s regulatory guidance. We will finalize this review during the 2013 fourth quarter. The provision for credit losses for the first nine-month period of 2013 declined \$42.2 million, or 39%, compared with the first nine-month period of 2012. The current quarter s provision for credit losses was \$44.3 million less than total NCOs, and the provision for credit losses for the first nine-month period of 2013 was \$76.5 million less than total NCOs for the same period. (See Credit Quality discussion). Given the absolute low level of the provision for credit losses and the uncertain and uneven nature of the economic recovery, some degree of volatility on a quarter-to-quarter basis is expected.

Noninterest Income

(This section should be read in conjunction with Significant Item 4.)

The following table reflects noninterest income for each of the past five quarters:

Table 9 Noninterest Income

		2013		20	12	3Q13 vs 3Q12		3Q13 vs	2Q13

Total noninterest income	\$ 250,503	\$ 248,655	\$ 252,209	\$ 297,651	\$ 261,067	\$ (10,564)	(4)%	\$ 1,848	1%

2013 Third Quarter versus 2012 Third Quarter

In the 2013 third quarter, noninterest income decreased \$10.6 million, or 4%, from the year ago quarter, primarily reflecting:

\$21.0 million, or 47%, decrease in mortgage banking income primarily driven by lower gain on sale margin and a higher percentage of originations held on balance sheet.

\$4.1 million, or 98%, decrease in security gains as the year ago quarter had certain securities designated as available-for-sale that were sold and the proceeds from those sales were reinvested into the held-to-maturity portfolio.

Partially offset by:

\$7.9 million, or 31%, increase in other noninterest income primarily related to fees associated with commercial loan activity.

\$5.1 million, or 8%, increase in service charges on deposit accounts reflecting 9% household and 7% commercial relationship growth and changing customer account utilization patterns.

21

2013 Third Quarter versus 2013 Second Quarter

Compared to the 2013 second quarter, noninterest income increased \$1.8 million, or 1%, reflecting similar activity within other noninterest income and service charges on deposit accounts, which increased \$8.0 million, or 31%, and \$4.9 million, or 7%, respectively. These were partially offset by the \$10.0 million, or 30%, decrease in mortgage banking income on 5% lower origination volume with tighter gain on sale margin and a \$3.0 million, or 15%, decrease in brokerage income due to typical seasonal trends.

2013 First Nine Months versus 2012 First Nine Months

Noninterest income for the first nine-month period of 2013 decreased \$48.8 million, or 6%, from the comparable year-ago period.

Table 10 Noninterest Income 2013 First Nine Months vs. 2012 First Nine Months

	Nine	Months End	ed Se	ptember 30,	Chang	ge
(dollar amounts in thousands)		2013		2012	Amount	Percent
Service charges on deposit accounts	\$	201,810	\$	194,096	\$ 7,714	4%
Mortgage banking income		102,528		129,381	(26,853)	(21)
Trust services		92,296		90,509	1,787	2
Electronic banking		68,340		61,279	7,061	12
Brokerage income		54,073		54,811	(738)	(1)
Insurance income		53,708		54,051	(343)	(1)
Gain on sale of loans		11,027		37,492	(26,465)	(71)
Bank owned life insurance income		42,603		42,275	328	1
Capital markets fees		32,888		34,652	(1,764)	(5)
Securities gains (losses)		(821)		3,906	(4,727)	N.M.
Other income		92,915		97,754	(4,839)	(5)
Total noninterest income	\$	751,367	\$	800,206	\$ (48,839)	(6)%

N.M. Not relevant, as numerator of calculation is a loss in current period compared with gain in prior period.

The \$48.8 million, or 6%, decrease in total noninterest income reflected:

\$26.9 million, or 21%, decrease in mortgage banking income. This primarily reflected a \$31.5 million, or 31%, decrease in origination and secondary marketing income.

\$26.5 million, or 71%, decrease in gain on sale of loans, primarily related to the year-ago period s automobile loan securitization.

\$4.8 million, or 5%, decrease in other noninterest income, primarily related to the prior year s \$11.4 million bargain purchase gain from the FDIC-assisted Fidelity Bank acquisition and due to automobile operating lease portfolio run off.

Partially offset by:

\$7.7 million, or 4%, increase in service charges on deposit accounts.

\$7.1 million, or 12%, increase in electronic banking income, primarily reflecting increased debit card usage.

Noninterest Expense

(This section should be read in conjunction with Significant Item 1,2,and 3.)

The following table reflects noninterest expense for each of the past five quarters:

Table 11 Noninterest Expense

2013 Third Quarter versus 2012 Third Quarter

In the 2013 third quarter, noninterest expense decreased \$35.0 million, or 8%, from the year-ago quarter. When adjusting for the \$17.4 million of Significant Items, noninterest expense decreased \$17.6 million. The decrease in the reported noninterest expenses primarily reflect:

\$18.4 million, or 7%, decrease in personnel costs, including a \$33.9 million one-time, noncash gain related to the pension curtailment. This was partially offset by the \$6.6 million one-time branch consolidation and severance expenses, as well as an \$7.9 million increase in salaries due to a 2% increase in the number of full-time equivalent employees.

\$6.0 million, or 16%, decline in other expense, reflecting lower representations and warranties related expenses and lower automobile operating lease expense.

\$5.0 million, or 29%, decrease in professional services, reflecting a decrease in legal and outside consultant expenses.

\$4.6 million, or 27%, decrease in marketing, primarily reflecting the refinement of targeted marketing programs and reduced promotional offers.

\$4.4 million, or 28%, decrease in deposit and other insurance expense due to lower insurance premiums.

\$2.9 million, or 59%, decrease in OREO and foreclosure expense as OREO properties have declined 46%. Partially offset by:

\$8.0 million, or 29%, increase in net occupancy, reflecting the branch consolidation and facilities optimization initiated this quarter.

2013 Third Quarter versus 2013 Second Quarter

Noninterest expense decreased \$22.5 million, or 5%, from the prior quarter. When adjusting for the \$16.6 million of Significant Items, noninterest expense decreased \$5.9 million. Personnel costs decreased \$34.5 million, or 13%, as it included \$27.3 million of net benefit from the aforementioned significant items. Net occupancy and equipment increased \$7.9 million and \$3.2 million, respectively, primarily from branch consolidation and facilities optimization related expenses.

2013 First Nine Months versus 2012 First Nine Months

Noninterest expense for the first nine-month period of 2013 decreased \$53.3 million, or 4%, from the comparable year-ago period.

23

Table 12 Noninterest Expense 2013 First Nine Months vs. 2012 First Nine Months

	Nine	Months End	led Se	ptember 30,	Chang	ge
(dollar amounts in thousands)		2013		2012	Amount	Percent
Personnel costs	\$	752,083	\$	734,241	\$ 17,842	2%
Outside data processing and other services		148,476		141,556	6,920	5
Net occupancy		93,361		82,152	11,209	14
Equipment		78,018		76,367	1,651	2
Deposit and other insurance expense		40,105		52,003	(11,898)	(23)
Professional services		29,020		43,244	(14,224)	(33)
Marketing		37,481		47,807	(10,326)	(22)
Amortization of intangibles		31,044		34,902	(3,858)	(11)
OREO and foreclosure expense		4,448		14,038	(9,590)	(68)
Gain on early extinguishment of debt				(798)	798	(100)
Other expense		97,958		139,736	(41,778)	(30)
Total noninterest expense	\$	1,311,994	\$	1,365,248	\$ (53,254)	(4)%

The \$53.3 million, or 4%, decrease in total noninterest expense reflected:

\$41.8 million, or 30%, decrease in other expense, primarily reflecting a decrease in operating lease expense and in the provision for mortgage representations and warranties. The year-ago period included a \$23.5 million addition to litigation reserves.

\$14.2 million, or 33%, decrease in professional services, reflecting a decrease in legal and outside consulting expense.

\$11.9 million, or 23%, decrease in deposit and other insurance, reflecting lower insurance premiums.

\$10.3 million, or 22%, decrease in marketing expense, primarily reflecting the refinement of targeted marketing programs and reduced promotional offers.

\$9.6 million, or 68%, decrease in OREO and foreclosure expense, as OREO properties have declined 45%. Partially offset by:

\$17.8 million, or 2%, increase in personnel costs, primarily reflecting an increase in bonuses, commissions, and full-time equivalent employees, as well as increased salaries and benefits. In addition, the 2013 third quarter included \$6.6 million of branch consolidation and severance expenses. This was partially offset by the \$33.9 million one-time, non-cash gain related to the pension curtailment in the 2013 third quarter.

\$11.2 million, or 14%, increase in net occupancy, reflecting \$7.9 million related to branch consolidation and facilities optimization.

\$6.9 million, or 5%, increase in outside data processing and other services, primarily related to continued IT infrastructure investments.

Provision for Income Taxes

(This section should be read in conjunction with Significant Item 5.)

The provision for income taxes in the 2013 third quarter was \$62.1 million compared to \$28.3 million in the 2012 third quarter. The provision for income taxes for the nine month periods ended September 30, 2013 and September 30, 2012 was \$166.7 million and \$129.8 million, respectively. The provision for income taxes for the three months ended September 30, 2013 and nine months ended September 30, 2013 were higher than the corresponding periods of 2012 due to higher levels of pre-tax income and a state deferred tax asset valuation allowance adjustment in the three months ended September 30, 2012. Both periods included the benefits from tax-exempt income, tax-advantaged investments, and general business credits. At September 30, 2013, we had a net federal deferred tax asset of \$152.2 million and a net state deferred tax asset of \$37.1 million. At December 31, 2012, we had a net federal deferred tax asset of \$171.4 million and a net state deferred tax asset of \$32.4 million. Based on both positive and negative evidence and our level of forecasted future taxable income, there was no impairment to the net deferred tax asset at September 30, 2013 and December 31, 2012. As of September 30, 2013 and December 31, 2012, there was no disallowed deferred tax asset for regulatory capital purposes.

24

We file income tax returns with the IRS and various state, city, and foreign jurisdictions. Federal income tax audits have been completed for tax years through 2009. We have appealed certain proposed adjustments resulting from the IRS examination of our 2006, 2007, 2008 and 2009 tax returns. We believe the tax positions taken related to such proposed adjustments are correct and supported by applicable statutes, regulations, and judicial authority, and intend to vigorously defend them. It is possible the ultimate resolution of the proposed adjustments, if unfavorable, may be material to the results of operations in the period it occurs. Nevertheless, although no assurances can be given, we believe the resolution of these examinations will not, individually or in the aggregate, have a material adverse impact on our consolidated financial position. In the first quarter of 2013, the IRS began an examination of our 2010 and 2011 consolidated federal income tax returns. Various state and other jurisdictions remain open to examination, including Kentucky, Indiana, Michigan, Pennsylvania, West Virginia, and Illinois.

RISK MANAGEMENT AND CAPITAL

Risk awareness, identification and assessment, reporting, and active management are key elements in overall risk management. We manage risk to an aggregate moderate-to-low risk profile through a control framework and by monitoring and responding to identified potential risks. Controls include, among others, effective segregation of duties, access, authorization and reconciliation procedures, as well as staff education and a disciplined assessment process.

We identify primary risks, and the sources of those risks, within each business unit. We utilize Risk and Control Self-Assessments (RCSA) to identify exposure risks. Through this RCSA process, we continually assess the effectiveness of controls associated with the identified risks, regularly monitor risk profiles and material exposure to losses, and identify stress events and scenarios to which we may be exposed. Our chief risk officer is responsible for ensuring that appropriate systems of controls are in place for managing and monitoring risk across the Company. Potential risk concerns are shared with the Risk Management Committee, Risk Oversight Committee, and the board of directors, as appropriate. Our internal audit department performs on-going independent reviews of the risk management process and ensures the adequacy of documentation. The results of these reviews are reported regularly to the audit committee and board of directors.

We believe that our primary risk exposures are credit, market, liquidity, operational, and compliance oriented. More information on risk can be found in the Risk Factors section included in Item 1A of our 2012 Form 10-K and subsequent filings with the SEC. Additionally, the MD&A included in our 2012 Form 10-K should be read in conjunction with this MD&A as this discussion provides only material updates to the 2012 Form 10-K. Our definition, philosophy, and approach to risk management have not materially changed from the discussion presented in the 2012 Form 10-K.

Credit Risk

Credit risk is the risk of financial loss if a counterparty is not able to meet the agreed upon terms of the financial obligation. The majority of our credit risk is associated with lending activities, as the acceptance and management of credit risk is central to profitable lending. We also have significant credit risk associated with our available-for-sale and other investment and held-to-maturity securities portfolios (see Note 4 and Note 5 of the Notes to the Unaudited Condensed Consolidated Financial Statements). We engage with other financial counterparties for a variety of purposes including investing, asset and liability management, mortgage banking, and trading activities. While there is credit risk associated with derivative activity, we believe this exposure is minimal.

We continue to focus on the identification, monitoring, and managing of our credit risk. In addition to the traditional credit risk mitigation strategies of credit policies and processes, market risk management activities, and portfolio diversification, we use additional quantitative measurement capabilities utilizing external data sources, enhanced use of modeling technology, and internal stress testing processes. Our portfolio management resources demonstrate our commitment to maintaining an aggregate moderate-to-low risk profile. In our efforts to continue to identify risk mitigation techniques, we have focused on product design features, origination policies, and treatment strategies for delinquent or stressed borrowers.

Loan and Lease Credit Exposure Mix

At September 30, 2013, loans and leases totaled \$42.6 billion, representing a \$1.8 billion, or 4%, increase compared to \$40.7 billion at December 31, 2012, primarily reflecting growth in the automobile portfolio, partially offset by a decline in the non-core CRE portfolio. The automobile portfolio increase reflected a continued focus on high quality originations.

At September 30, 2013, commercial loans and leases totaled \$22.2 billion and represented 52% of our total loan and lease credit exposure. Our commercial portfolio is diversified along product type, customer size, and geography across our footprint, and is comprised of the following loan types (see Commercial Credit discussion):

Table of Contents

C&I loans and leases are made to commercial customers for use in normal business operations to finance working capital needs, equipment purchases, or other projects. The majority of these borrowers are customers doing business within our geographic regions. C&I loans and leases are generally underwritten individually and secured with the assets of the company and/or the personal guarantee of the business owners. The financing of owner occupied facilities is considered a C&I loan even though there is improved real estate as collateral. This treatment is a result of the credit decision process, which focuses on cash flow from operations of the business to repay the debt. The operation, sale, rental, or refinancing of the real estate is not considered the primary repayment source for these types of loans. As we have expanded our C&I portfolio, we have developed a vertical strategy to ensure that new products or lending types are embedded within a structured, centralized Commercial Lending area with designated experienced credit officers.

CRE CRE loans consist of loans to developers and REITs supporting income-producing or for-sale commercial real estate properties. We mitigate our risk on these loans by requiring collateral values that exceed the loan amount and underwriting the loan with projected cash flow in excess of the debt service requirement. These loans are made to finance properties such as apartment buildings, office and industrial buildings, and retail shopping centers, and are repaid through cash flows related to the operation, sale, or refinance of the property.

Construction CRE Construction CRE loans are loans to developers, companies, or individuals used for the construction of a commercial or residential property for which repayment will be generated by the sale or permanent financing of the property. Our construction CRE portfolio primarily consists of retail, multi family, office, and warehouse project types. Generally, these loans are for construction projects that have been presold or preleased, or have secured permanent financing, as well as loans to real estate companies with significant equity invested in each project. These loans are underwritten and managed by a specialized real estate lending group that actively monitors the construction phase and manages the loan disbursements according to the predetermined construction schedule.

Total consumer loans and leases were \$20.3 billion at September 30, 2013, and represented 48% of our total loan and lease credit exposure. The consumer portfolio is comprised primarily of automobile, home equity loans and lines-of-credit, and residential mortgages (see Consumer Credit discussion).

Automobile Automobile loans are comprised primarily of loans made through automotive dealerships and include exposure in selected states outside of our primary banking markets. The exposure outside of our primary banking markets represents 22% of the total exposure, with no individual state representing more than 5%. Applications are underwritten utilizing an automated underwriting system that applies consistent policies and processes across the portfolio.

Home equity Home equity lending includes both home equity loans and lines-of-credit. This type of lending, which is secured by a first-lien or junior-lien on the borrower's residence, allows customers to borrow against the equity in their home or refinance existing mortgage debt. Products include closed-end loans which are generally fixed-rate with principal and interest payments, and variable-rate, interest-only lines-of-credit which do not require payment of principal during the 10-year revolving period. The home equity line of credit may convert to a 20 year amortizing structure at the end of the revolving period. Applications are underwritten centrally in conjunction with an automated underwriting system. The home equity underwriting criteria is based on minimum credit scores, debt-to-income ratios, and LTV ratios, with current collateral valuations.

Residential mortgage Residential mortgage loans represent loans to consumers for the purchase or refinance of a residence. These loans are generally financed over a 15-year to 30-year term, and in most cases, are extended to borrowers to finance their primary residence. Applications are underwritten centrally using consistent credit policies and processes. All residential mortgage loan decisions utilize a full appraisal for collateral valuation. Huntington has not originated residential mortgages that allow negative amortization or allow the borrower multiple payment options.

Other consumer Primarily consists of consumer loans not secured by real estate, including personal unsecured loans. We introduced a consumer credit card product during the 2013 third quarter, utilizing a centralized underwriting system and focusing on existing Huntington customers.

26

The table below provides the composition of our total loan and lease portfolio:

As shown in the table above, our loan portfolio is diversified by consumer and commercial credit. We manage the credit exposure via a corporate level credit concentration policy. The policy designates specific loan types, collateral types, and loan structures to be formally tracked and assigned limits as a percentage of capital. C&I lending by segment, specific limits for CRE primary project types, loans secured by residential real estate, shared national credit exposure, unsecured lending, and designated high risk loan definitions represent examples of specifically tracked components of our concentration management process. Our concentration management process is approved by our board level Risk Oversight Committee and is one of the strategies utilized to ensure a high quality, well diversified portfolio that is consistent with our overall objective of maintaining an aggregate moderate-to-low risk profile.

The table below provides our total loan and lease portfolio segregated by the type of collateral securing the loan or lease:

Table 14 Loan and Lease Portfolio by Collateral Type

Commercial Credit

Refer to the Commercial Credit section of our 2012 Form 10-K for our commercial credit underwriting and on-going credit management processes.

C&I PORTFOLIO

The C&I portfolio continues to have strong origination activity as evidenced by the growth over the past 12 months. The credit quality of the portfolio continues to improve as we maintain focus on high quality originations. Problem loans have trended downward, reflecting a combination of proactive risk identification and effective workout strategies implemented by the SAD. Nevertheless, we continue to proactively identify borrowers that may be facing financial difficulty to assess all potential solutions.

CRE PORTFOLIO

We manage the risks inherent in this portfolio specific to CRE lending, focusing on the quality of the developer and the specifics associated with each project. Generally, we: (1) limit our loans to 80% of the appraised value of the commercial real estate at origination, (2) require net operating cash flows to be 125% of required interest and principal payments, and (3) if the commercial real estate is nonowner occupied, require that at least 50% of the space of the project be preleased. We actively monitor both geographic

27

and project-type concentrations and performance metrics of all CRE loan types, with a focus on loans identified as higher risk based on the risk rating methodology. Both macro-level and loan-level stress-test scenarios based on existing and forecast market conditions are part of the on-going portfolio management process for the CRE portfolio.

In 2010, we segregated our CRE portfolio into core and noncore segments. We believe segregating noncore CRE from core CRE improved our ability to understand the nature, performance prospects, and problem resolution opportunities of these segments, thus allowing us to continue to deal proactively with any emerging credit issues.

A CRE loan is generally considered core when the borrower is an experienced, well-capitalized developer in our Midwest footprint, and has either an established meaningful relationship with us that generated an acceptable return on capital or demonstrates the prospect of establishing one. The core CRE portfolio was \$3.8 billion at September 30, 2013, representing 78% of total CRE loans. The performance of the core portfolio has met our expectations based on the consistency of the asset quality metrics within the portfolio. Based on our extensive project level assessment process, including forward-looking collateral valuations, we continue to believe the credit quality of the core portfolio is stable. Loans are not reclassified between the core and noncore segments based on performance.

Credit quality data regarding the ACL and NALs, segregated by core CRE loans and noncore CRE loans, is presented in the following table:

Table 15 Commercial Real Estate Core vs. Noncore Portfolios

				Septe	ember 30, 2013

Total commercial real estate	\$ 4,872	\$	165	\$ 177	3.63%	6.79%	\$	80

				Dece	ember 31, 2012	!		
	Ending						Non	accrual
(dollar amounts in millions)	Balance	Prio	r NCOs	ACL \$	ACL %	Credit Mark (1)	L	oans
Total core	\$ 3,937	\$	21	\$ 100	2.54%	3.06%	\$	41
Noncore SAD (2)	597		145	129	21.61	36.93		82
Noncore Other	865		18	61	7.05	8.95		4
Total noncore	1,462		163	190	13.00	21.72		86
Total commercial real estate	\$ 5,399	\$	184	\$ 290	5.37%	8.49%	\$	127

⁽¹⁾ Calculated as (Prior NCOs + ACL \$) / (Ending Balance + Prior NCOs).

Noncore loans managed by SAD, the area responsible for managing loans and relationships designated as Classified Loans. As shown in the above table, the ending balance of the CRE portfolio at September 30, 2013, declined \$0.5 billion, or 10%, compared with December 31, 2012. The decline in the noncore segment primarily reflected amortization and payoffs as we actively focus on the noncore portfolio to reduce our overall CRE exposure. This reduction demonstrates our continued commitment to achieving a lower risk profile in the CRE portfolio, consistent with our overall objective of maintaining an aggregate moderate-to-low risk profile. The decline in the core segment primarily reflected continued payoffs, partially offset by originations. We continue to support our core developer customers as appropriate, however, new core originations are balanced against internal concentration limits and profitability hurdles.

Also, as shown above, substantial reserves for the noncore portfolio have been established. At September 30, 2013, the ACL related to the noncore portfolio was 11.73%. The combination of the existing ACL and prior NCOs represents the total credit actions taken on each segment of the portfolio. From this data, we calculate a credit mark that provides a consistent measurement of the cumulative credit actions taken against a specific portfolio segment. The 36.33% credit mark associated with the SAD-managed noncore portfolio is an indicator of the proactive portfolio management strategy employed for this portfolio.

28

Consumer Credit

Refer to the Consumer Credit section of our 2012 Form 10-K for our consumer credit underwriting and on-going credit management processes.

During a 2013 third quarter review of our consumer portfolios, we identified additional loans associated with borrowers who had filed Chapter 7 bankruptcy and had not reaffirmed their debt, thus meeting the definition of collateral dependent per OCC regulatory guidance. These loans were not identified in the 2012 third quarter implementation of the OCC s regulatory guidance. The bankruptcy court s discharge of the borrower s debt is considered a concession when the discharged debt is not reaffirmed, and as such, the loan is placed on nonaccrual status, and written down to collateral value, less anticipated selling costs. As a result of the review of our existing consumer portfolios, NCOs increased by \$13.1 million and the ALLL increased by \$6.0 million based on our estimated exposure. The majority of the NCO impact was in the home equity portfolio as our policy is to fully charge-off junior-lien loans that meet the regulatory guidance. We will finalize this review during the 2013 fourth quarter.

AUTOMOBILE PORTFOLIO

Our strategy in the automobile portfolio continued to focus on high quality borrowers as measured by both FICO and internal custom scores, combined with appropriate LTVs, terms, and profitability. Our strategy and operational capabilities allow us to appropriately manage the origination quality across the entire portfolio, including our newer markets. Although increased origination volume and entering new markets can be associated with increased risk levels, we believe our disciplined strategy and operational processes significantly mitigate these risks.

We have continued to consistently execute our value proposition and take advantage of available market opportunities. Importantly, we have maintained our high credit quality standard while expanding the portfolio. We have developed and implemented a successful loan securitization strategy to ensure we remain within our established portfolio concentration limits.

During the 2013 third quarter, we expanded further into our Upper Midwest markets by entering into the Iowa market. Consistent with our expansion process, the Iowa market is managed by seasoned professionals with local market knowledge.

RESIDENTIAL REAL ESTATE SECURED PORTFOLIOS

The properties securing our residential mortgage and home equity portfolios are primarily located within our geographic footprint. The continued stress on home prices has caused the performance in these portfolios to remain weaker than historical levels. The residential-secured portfolio originations continue to be of high quality, with the majority of the negative credit impact coming from loans originated in 2006 and earlier. We continue to evaluate all of our policies and processes associated with managing these portfolios. Our loss mitigation and foreclosure activities are consolidated in one location under common management. This structure allows us to focus on effectively helping our customers with appropriate solutions for their specific circumstances.

Table 16 Selected Home Equity and Residential Mortgage Portfolio Data

		Home I		Residential	Mortgage	
	Secured by	first-lien	Secured by j	unior-lien

(1)

- The LTV ratios for home equity loans and home equity lines-of-credit are cumulative and reflect the balance of any senior loans. LTV ratios reflect collateral values at the time of loan origination.
- (2) Portfolio weighted average FICO scores reflect currently updated customer credit scores whereas origination weighted average FICO scores reflect the customer credit scores at the time of loan origination.
- (3) Represents only owned-portfolio originations.

29

Home Equity Portfolio

Our home equity portfolio (loans and lines-of-credit) consists of both first-lien and junior-lien mortgage loans with underwriting criteria based on minimum credit scores, debt-to-income ratios, and LTV ratios. We offer closed-end home equity loans which are generally fixed-rate with principal and interest payments, and variable-rate interest-only home equity lines-of-credit which do not require payment of principal during the 10-year revolving period of the line-of-credit. Applications are underwritten centrally in conjunction with an automated underwriting system.

Given the low interest rate environment over the past several years, many borrowers have utilized the line-of-credit home equity product as the primary source of financing their home versus residential mortgages. The proportion of the home equity portfolio secured by a first-lien has increased significantly over the past three years, positively impacting the portfolio s risk profile. At September 30, 2013, \$4.8 billion or 57% of our total home equity portfolio was secured by first-lien mortgages. The first-lien position, combined with continued high average FICO scores, significantly reduces the credit risk associated with these loans.

Within the home equity line-of-credit portfolio, the standard product is a 10-year interest-only draw period with a 20-year fully amortizing term at the end of the draw period. Prior to 2007, the standard product was a 10-year draw period with a balloon payment, while subsequent originations convert to a 20-year amortizing loan structure. After the 10-year draw period, the borrower must reapply to extend the existing structure or begin repaying the debt in a traditional term structure.

The principal and interest payment associated with the term structure will be higher than the interest-only payment, resulting in maturity risk. Our maturity risk can be segregated into two distinct segments: (1) home equity lines-of-credit underwritten with a balloon payment at maturity and (2) home equity lines-of-credit with an automatic conversion to a 20-year amortizing loan. We manage this risk based on both the actual maturity date of the line-of-credit structure and at the end of the 10-year draw period. This maturity risk is embedded in the portfolio which we address with proactive contact strategies beginning one year prior to maturity. In certain circumstances, our Home Saver group is able to provide payment and structure relief to borrowers experiencing significant financial hardship associated with the payment adjustment.

The table below summarizes our home equity line-of-credit portfolio by maturity date:

Table 17 Maturity Schedule of Home Equity Line-of-Credit Portfolio

			Septembe	er 30, 2013		
					More than	
(dollar amounts in millions)	1 year or less 1	to 2 years	2 to 3 years	3 to 4 years	4 years	Total
Secured by first-lien	\$ 51 \$	47	\$	\$	\$ 2,286	\$ 2,384
Secured by junior-lien	267	257	125	140	2,269	3,058
Total home equity line-of-credit	\$318 \$	304	\$ 125	\$ 140	\$ 4,555	\$ 5,442

The amounts in the above table maturing in four years or less primarily consist of balloon payment structures and represent the most significant maturity risk. The amounts maturing in more than four years primarily consist of home equity lines-of-credit with a 20-year amortization period after the 10-year draw period.

Historically, less than 30% of our home equity lines-of-credit that are one year or less from maturity actually reach the maturity date as borrowers apply to re-establish the revolving period under current underwriting standards. We anticipate this percentage will decline in future periods as our proactive approach to managing maturity risk continues to evolve.

Residential Mortgages Portfolio

At September 30, 2013, 45% of our total residential mortgage portfolio were ARMs. These ARMs primarily consist of a fixed-rate of interest for the first 3 to 5 years and then adjust annually. At September 30, 2013, ARM loans that were expected to have rates reset through 2015 totaled \$1.2 billion. These loans scheduled to reset are primarily associated with loans originated subsequent to 2007, and as such, are not subject to the most significant declines in underlying property value. Given the quality of our borrowers, the relatively low current interest rates, and the results of our continued analysis (including possible impacts of changes in interest rates), we believe that we have a relatively limited exposure to ARM reset risk. Nonetheless, we have taken actions to mitigate our risk exposure. We initiate borrower contact at least six months prior to the

interest rate resetting and have been successful in converting many ARMs to fixed-rate loans through this process. Given the relatively low current interest rates, many fixed-rate products currently offer a better interest rate to our ARM borrowers.

Several government programs continued to impact the residential mortgage portfolio, including various refinance programs such as HARP and HAMP, which positively affected the availability of credit for the industry. During the nine-month period ended September 30, 2013, we closed \$480 million in HARP residential mortgages and \$5 million in HAMP residential mortgages. The HARP and HAMP residential mortgage loans are part of our residential mortgage portfolio or serviced for others. We are subject to repurchase risk associated with residential mortgage loans sold in the secondary market. An appropriate level of reserve for representations and warranties related to residential mortgage loans sold has been established to address this repurchase risk inherent in the portfolio (see Operational Risk discussion).

Credit Quality

(This section should be read in conjunction with Note 3 of the Notes to Unaudited Condensed Consolidated Financial Statements.)

We believe the most meaningful way to assess overall credit quality performance is through an analysis of credit quality performance ratios. This approach forms the basis of most of the discussion in the sections immediately following: NPAs and NALs, TDRs, ACL, and NCOs. In addition, we utilize delinquency rates, risk distribution and migration patterns, and product segmentation in the analysis of our credit quality performance.

Credit quality performance in the 2013 third quarter reflected overall continued improvement. Our overall credit quality performance is returning to normalized, pre-recession levels. NALs declined 8% compared to the prior quarter as both the C&I and CRE portfolio segments showed declines, and there was also some improvement across the consumer portfolios. NCOs increased to 0.53% in the quarter, as a result of activity in the CRE and home equity portfolios. The CRE increase reflected the impact of one relationship, and is an example of the potential quarterly volatility given the absolute low level of losses incurred last quarter. The home equity impact was related to the Chapter 7 bankruptcy review conducted during the quarter. We will finalize this review during the 2013 fourth quarter. Absent the Chapter 7 bankruptcy impact, the portfolio performed as expected. Other than the CRE and home equity portfolios, the remaining portfolios were relatively consistent compared to the prior quarter. Commercial criticized loans increased compared to the prior quarter, reflecting our continued focus on proactively identifying potential problem credits. There was no specific industry or region that drove the increase in the quarter. Commercial classified loans declined, reflecting the continued improvement across the portfolio, however, OLEM increased from the prior quarter. The ACL to total loans ratio declined to 1.72%, but our coverage ratios as demonstrated by the ACL to NAL ratio of 220% remained strong.

NPAs, NALs, AND TDRs

(This section should be read in conjunction with Note 3 of the Notes to Unaudited Condensed Consolidated Financial Statements.)

NPAs and NALs

NPAs consist of (1) NALs, which represent loans and leases no longer accruing interest, (2) impaired loans held for sale, (3) OREO properties, and (4) other NPAs. Any loan in our portfolio may be placed on nonaccrual status prior to the policies described below when collection of principal or interest is in doubt. Also, when a borrower with discharged non-reaffirmed debt in a Chapter 7 bankruptcy is identified and the loan is determined to be collateral dependent, the consumer loan is placed on nonaccrual status.

C&I and CRE loans are placed on nonaccrual status at 90-days past due, or when repayment of principal and interest is in doubt. With the exception of residential mortgage loans guaranteed by government organizations which continue to accrue interest, residential mortgage loans are placed on nonaccrual status at 150-days past due. First-lien home equity loans are placed on nonaccrual status at 150-days past due. Junior-lien home equity loans are placed on nonaccrual status at the earlier of 120-days past due or when the related first-lien loan has been identified as nonaccrual. Automobile and other consumer loans are generally charged-off when the loan is 120-days past due.

When loans are placed on nonaccrual, accrued interest income is reversed with current year accruals charged to earnings and prior year amounts generally charged-off as a credit loss. When, in our judgment, the borrower s ability to make required interest and principal payments has resumed and collectability is no longer in doubt, the loan or lease is returned to accrual status.

31

The following table reflects period-end NALs and NPAs detail for each of the last five quarters:

Table 18 Nonaccrual Loans and Leases and Nonperforming Assets

		2013		20	12
(dollar amounts in thousands)	September 30,	June 30,	March 31,	December 31,	September 30,
Nonaccrual loans and leases:					
Commercial and industrial	\$ 68,034	\$ 80,037	\$ 80,928	\$ 90,705	\$ 109,452
Commercial real estate	80,295	93,643	110,803	127,128	148,986
Automobile	5,972	7,743	6,770	7,823	11,814
Residential mortgage	116,260	122,040	118,405	122,452	123,140
Home equity	62,545	60,083	63,405	59,525	51,654
Total nonaccrual loans and leases ⁽¹⁾	333,106	363,546	380,311	407,633	445,046
Other real estate owned, net					
Residential	16,610	17,353	19,538	21,378	23,640
Commercial	12,544	3,713	5,601	6,719	30,566
Total other real estate owned, net	29,154	21,066	25,139	28,097	54,206
Other nonperforming assets ⁽²⁾	12,000	12,087	10,045	10,045	10,476
Total nonperforming assets	\$ 374,260	\$ 396,699	\$ 415,495	\$ 445,775	\$ 509,728
	,		·	·	
Nonaccrual loans as a % of total loans and leases	0.78%	0.87%	0.92%	1.00%	1.11%
Nonperforming assets ratio ⁽³⁾	0.88	0.95	1.01	1.09	1.26
(NPA+90days)/(Loan+OREO) ⁽⁴⁾	1.29	1.38	1.48	1.59	1.75

⁽¹⁾ Nonaccrual loans and leases related to Chapter 7 bankruptcy loans were \$57.9 million, \$59.6 million, \$59.9 million, \$60.1 million, and \$63.0 million at September 30, 2013, June 30, 2013, March 31, 2013, December 31, 2012, and September 30, 2012, respectively.

The \$22.4 million, or 6%, decline in NPAs compared with June 30, 2013, primarily reflected:

\$12.0 million, or 15%, decline in C&I NALs and problem credit resolutions, including return to accrual status and payoffs resulting from successful workout strategies implemented by our commercial loan workout group. We expect that the overall trend will continue to be lower.

\$13.3 million, or 14%, decline in CRE NALs, reflecting both NCO activity and problem credit resolutions, including borrower payments and payoffs partially resulting from successful workout strategies implemented by our commercial loan workout group.

\$5.8 million, or 5%, decline in residential mortgage NALs, reflecting continued improvement in the overall residential portfolio, particularly the continued decline in the inflow of newly distressed borrowers.

Partially offset by:

⁽²⁾ Other nonperforming assets includes certain impaired investment securities.

⁽³⁾ This ratio is calculated as nonperforming assets divided by the sum of loans and leases, other nonperforming assets, and net other real estate owned.

⁽⁴⁾ This ratio is calculated as the sum of nonperforming assets and total accruing loans and leases past due 90 days or more divided by the sum of loans and leases and net other real estate owned.

\$8.1 million or 38%, increase in net OREO properties, primarily reflecting one large commercial OREO property.

\$2.5 million, or 4%, increase in home equity NALs. We continue to work with troubled borrowers to take advantage of the current low interest-rate environment and the recent stabilization of home prices. The NAL balances have been written down to collateral value, less anticipated selling costs. This substantially limits any significant future risk of additional loss on these loans and makes a modification more likely for borrowers with consistent cash flow.

Compared with December 31, 2012, NPAs decreased \$71.5 million, or 16%, primarily reflecting:

\$22.7 million, or 25%, decline in C&I NALs, reflecting both NCO and problem credit resolutions, including payoffs partially resulting from successful workout strategies implemented by our commercial loan workout group. The decline was associated with loans throughout our footprint, with no specific industry concentration.

32

\$46.8 million, or 37%, decline in CRE NALs, reflecting both NCO and problem credit resolutions, including borrower payments and payoffs partially resulting from successful workout strategies implemented by our commercial loan workout group.

\$6.2 million, or 5%, decrease in residential mortgage NALs.

TDR Loans

(This section should be read in conjunction with Note 3 of the Notes to Unaudited Condensed Consolidated Financial Statements.)

TDRs are modified loans in which a concession is provided to a borrower experiencing financial difficulties. TDRs can be classified as either accrual or nonaccrual loans. Nonaccrual TDRs are included in NALs whereas accruing TDRs are excluded from NALs, as it is probable that all contractual principal and interest due under the restructured terms will be collected. TDRs primarily reflect our loss mitigation efforts to proactively work with borrowers having difficulty making their payments.

The table below presents our accruing and nonaccruing TDRs at period-end for each of the past five quarters:

Table 19 Accruing and Nonaccruing Troubled Debt Restructured Loans

		2013		20	012
(dollar amounts in thousands)	September 30,	June 30,	March 31,	December 31,	September 30,
Troubled debt restructured loans accruing:

Residential mortgage	77,525	80,563	84,317	84,515	83,163
Other consumer				113	113
Total troubled debt restructured loans nonaccruing	126,269	139,192	143,880	151,218	151,989
	-,	,	- ,	,	
Total troubled debt restructured loans	\$ 902,893	\$ 883,990	\$ 913,710	\$ 875,625	\$ 839,969

(1) Included \$43,068 thousand incorrectly reflected as TDRs in the 2013 first quarter.

The increase in the accruing TDR home equity portfolio from the 2012 third quarter is primarily related to the refinancing of certain maturing lines-of-credit structured as a 10-year draw period with a balloon payment to a new loan with a 20-year amortization period. Based on the borrower s financial condition, we believe the new 20-year amortizing loan would not have been available to the borrower through normal channels or other sources. As such, we view this as a concession and have designated the new loan as a TDR.

Our strategy is to structure commercial TDRs in a manner that avoids new concessions subsequent to the initial TDR terms. However, there are times when subsequent modifications are required, such as when the modified loan matures. Often the loans are performing in accordance with the TDR terms, and a new note is originated with similar modified terms. These loans are subjected to the normal underwriting standards and processes for other similar credit extensions, both new and existing. If the loan is not performing in accordance with the existing TDR terms,

typically an individualized approach to repayment is established. In accordance with ASC 310-20-35, the refinanced note is evaluated to determine if it is considered a new loan or a continuation of the prior loan. A new loan is considered for removal of the TDR designation. A continuation of the prior note requires the continuation of the TDR designation, and because the refinanced note constitutes a new or amended debt instrument, it is included in our TDR activity table (below) as a new TDR and a restructured TDR removal during the period.

The types of concessions granted are consistent with those granted on new TDRs and include interest rate reductions, amortization or maturity date changes beyond what the collateral supports, and principal forgiveness based on the borrower s specific needs at a point in time. Our policy does not limit the number of times a loan may be modified. A loan may be modified multiple times if it is considered to be in the best interest of both the borrower and us.

Loans are not automatically considered to be accruing TDRs upon the granting of a new concession. If the loan is in accruing status and no loss is expected based on the modified terms, the modified TDR remains in accruing status. For loans that are on nonaccrual status before the modification, collection of both principal and interest must not be in doubt, and the borrower must be able to exhibit sufficient cash flows for a six-month period of time to service the debt in order to return to accruing status. This six-month period could extend before or after the restructure date.

The following table reflects TDR activity for each of the past five quarters:

Table 20 Troubled Debt Restructured Loan Activity

		2013	2012		
(dollar amounts in thousands)	Third	Second	First	Fourth	Third
TDRs, beginning of period	\$ 883,990	\$ 913,710	\$ 875,625	\$ 839,968	\$ 782,035

Restructured TDRs accruing	(58,499)	(46,987)	(53,936)	(40,682)	(30,439)
Restructured TDRs nonaccruin ⁽¹⁾	(6,163)	(2,520)	(10,674)	(7,138)	(14,721)
Other	(2,361)	$(43,076)^{(2)}$	(6,196)	(1,561)	
TDRs, end of period	\$ 902,893	\$ 883,990	\$ 913,710	\$ 875,625	\$ 839,968

- (1) Represents existing TDRs that were re-underwritten with new terms providing a concession. A corresponding amount is included in the New TDRs amount above.
- (2) Included a \$43,068 thousand reduction of home equity TDRs incorrectly reflected as new TDRs in the 2013 first quarter. ACL

(This section should be read in conjunction with Note 3 of the Notes to Unaudited Condensed Consolidated Financial Statements.)

Our total credit reserve is comprised of two different components, both of which in our judgment are appropriate to absorb credit losses inherent in our loan and lease portfolio: the ALLL and the AULC. Combined, these reserves comprise the total ACL. Our Credit Administration group is responsible for developing the methodology assumptions and estimates used in the calculation, as well as determining the appropriateness of the ACL. The ALLL represents the estimate of losses inherent in the loan portfolio at the reported date. Additions to the ALLL result from recording provision expense for loan losses or increased risk levels resulting from loan risk-rating downgrades, while reductions reflect charge-offs (net of recoveries), decreased risk levels resulting from loan risk-rating upgrades, or the sale of loans. The AULC is determined by applying the transaction reserve process to the unfunded portion of the loan exposures adjusted by an applicable funding expectation.

A provision for credit losses is recorded to adjust the ACL to the level we have determined to be appropriate to absorb credit losses inherent in our loan and lease portfolio. The provision for credit losses in the 2013 third quarter was \$11.4 million, compared with \$24.7 million in the prior quarter and \$37.0 million in the year-ago quarter. The provision for credit losses during the nine-month period ended September 30, 2013 was \$65.7 million, compared with \$107.9 million in the comparable year-ago period. (See Provision for Credit Losses discussion within Results of Operations section).

We regularly evaluate the appropriateness of the ACL by performing on-going evaluations of the loan and lease portfolio, including such factors as the differing economic risks associated with each loan category, the financial condition of specific borrowers, the level of delinquent loans, the value of any collateral and, where applicable, the existence of any guarantees or other documented support. We evaluate the impact of changes in interest rates and overall economic conditions on the ability of borrowers to meet their financial obligations when quantifying our exposure to credit losses and assessing the appropriateness of our ACL at each reporting date. In addition to general economic conditions and the other factors described above, we also consider the impact of collateral value trends and portfolio diversification.

34

In the 2013 third quarter, we implemented an enhanced commercial risk rating system and ACL calculation process. In addition, we enhanced some of our qualitative assessments, specifically around the impact of the prevailing economic conditions. These enhancements had an immaterial impact on the overall credit reserve and the overall decline in the ACL was primarily due to an improvement in underlying credit quality across the portfolio. However, the enhanced commercial risk rating system resulted in an increase in the allocated reserves associated with the C&I portfolio and a decline associated with the CRE portfolio. The portfolio level changes are more fully described below.

Our ACL evaluation process includes the on-going assessment of credit quality metrics, and a comparison of certain ACL benchmarks to current performance. While the total ACL balance has declined in recent quarters, all of the relevant benchmarks remain strong.

The table below reflects the allocation of our ACL among our various loan categories during each of the past five quarters:

Table 21 Allocation of Allowance for Credit Losses (1)

			2013					201	2

⁽¹⁾ Percentages represent the percentage of each loan and lease category to total loans and leases.

The C&I ACL increased \$28 million from the 2013 second quarter, primarily due to the enhancements to the risk rating system, an increase in criticized loans, and enhanced assumptions regarding the unfunded portion of loan commitments. The CRE ACL decreased \$91 million from the

2013 second quarter, due to charge-offs of previously reserved loans related to a large CRE relationship and the impact of incorporating the current collateral value in the calculation of the expected loss in addition to a property type analysis. This provides a more specific assessment of the potential Loss Given Default. The current portfolio management practices focus on increasing borrower equity in the projects, and recent underwriting includes meaningful lower LTV s. The 2013 third quarter CRE ACL covers NALs by more than two times and represents 13 quarters of the average 4 quarter charge-off level. The decrease associated with the auto portfolio is based on the continued positive performance metrics and the high quality origination strategy. The home equity ALLL increased slightly as the junior-lien lien component remains the riskiest portion of the portfolio.

35

Table of Contents

The residential mortgage portfolio ALLL declined, consistent with the improving credit quality metrics. The ALLL for the other consumer portfolio is consistent with expectations given the increasing level of overdraft exposure. The reduction in the ACL, compared with both June 30, 2013 and December 31, 2012, is primarily a function of the decline in the CRE portfolio. The AULC increase in the quarter represents the impact of a an enhanced assessment of the unfunded commercial exposure.

The ACL to total loans declined to 1.72% at September 30, 2013, compared to 1.99% at December 31, 2012. We believe the decline in the ratio is appropriate given the significant continued improvement in the risk profile of our loan portfolio. Further, we believe that early identification of loans with changes in credit metrics and aggressive action plans for these loans, combined with originating high quality new loans will contribute to continued improvement in our key credit quality metrics.

We have significant exposure to loans secured by residential real estate and continue to be an active lender in our communities. Recently, real estate values have begun to slowly rise from their 2011 levels. Industry indices, as well as our own view of our primary markets, indicate home prices continued to slowly increase across our primary markets. In aggregate, the housing markets in our footprint states have continued to mirror the national recovery trend.

Given the combination of these noted factors, we believe that our ACL is appropriate and its coverage level is reflective of the quality of our portfolio and the current operating environment.

NCOs

Any loan in any portfolio may be charged-off prior to the policies described below if a loss confirming event has occurred. Loss confirming events include, but are not limited to, bankruptcy (unsecured), continued delinquency, foreclosure, or receipt of an asset valuation indicating a collateral deficiency and that asset is the sole source of repayment. Additionally, discharged, collateral dependent non-reaffirmed debt in Chapter 7 bankruptcy filings will result in a charge-off to estimated collateral value, less anticipated selling costs at the time of the modification.

C&I and CRE loans are either charged-off or written down to net realizable value at 90-days past due. Automobile loans and other consumer loans are charged-off at 120-days past due. First-lien and junior-lien home equity loans are charged-off to the estimated fair value of the collateral, less anticipated selling costs, at 150-days past due and 120-days past due, respectively. Residential mortgages are charged-off to the estimated fair value of the collateral, less anticipated selling costs, at 150-days past due.

36

The following table reflects NCO detail for each of the last five quarters:

Table 22 Quarterly Net Charge-off Analysis

Other consumer	7.19	5.28	6.67	4.74	6.49
Total consumer	0.83	0.64	0.76	0.91	1.65
Net charge-offs as a % of average loans	0.53%	0.34%	0.51%	0.69%	1.05%

In assessing NCO trends, it is helpful to understand the process of how commercial loans are treated as they deteriorate over time. The ALLL established is consistent with the level of risk associated with the original underwriting. As a part of our normal portfolio management process for commercial loans, the loan is periodically reviewed and the ALLL is increased or decreased based on the enhanced risk rating. In certain cases, the standard ALLL is determined to not be appropriate, and a specific reserve is established based on the projected cash flow or collateral value of the specific loan. Charge-offs, if necessary, are generally recognized in a period after the specific ALLL was established. If the

previously established ALLL exceeds that necessary to satisfactorily resolve the problem loan, a reduction in the overall level of the ALLL could be recognized. Consumer loans are treated in much the same manner as commercial loans, with increasing reserve factors applied based on the risk characteristics of the loan, although specific reserves are not identified for consumer loans. In summary, if loan quality deteriorates, the typical credit sequence would be periods of reserve building, followed by periods of higher NCOs as the previously established ALLL is utilized. Additionally, an increase in the ALLL either precedes or is in conjunction with increases in NALs. When a loan is classified as NAL, it is evaluated for specific ALLL or charge-off. As a result, an increase in NALs does not necessarily result in an increase in the ALLL or an expectation of higher future NCOs.

Our overall NCOs are returning to pre-recession levels, however, we anticipate NCO levels for both the residential mortgage and home equity portfolios will remain at elevated levels in the near future. The home equity portfolio will continue to be impacted by borrowers that are seeking to refinance, but are in a negative equity position because of the junior-lien loan. Right-sizing and debt forgiveness associated with these situations are becoming more frequent as borrowers realize the impact to their credit is minor, and that a default on a junior-lien loan is not likely to cause borrowers to lose their home.

All residential mortgage loans greater than 150-days past due are charged-down to the estimated value of the collateral, less anticipated selling costs. The remaining balance is in delinquent status until a modification can be completed, or the loan goes through the foreclosure process. For the home equity portfolio, virtually all of the defaults represent full charge-offs, as there is no remaining equity, creating a lower delinquency rate but a higher NCO impact.

37

Table of Contents

2013 Third Quarter versus 2013 Second Quarter

NCOs increased \$21.0 million in the current quarter to \$55.7 million as a result of the CRE and home equity portfolios. There was one significant charge-off in the quarter associated with a CRE relationship, and the home equity portfolio was impacted by the Chapter 7 bankruptcy-related losses. NCOs were an annualized 0.53% of average loans and leases in the current quarter, up from 0.34% in the 2013 second quarter, although still within our long term expectation of 0.35% 0.55%. Given the absolute low level of commercial NCO s, there will continue to be some volatility on a quarter to quarter comparison basis.

C&I NCOs were essentially flat with the prior quarter. Given the relatively low absolute level of NCOs in this portfolio, some degree of volatility on a quarter-to-quarter basis is expected.

CRE NCOs increased \$10.2 million, or 427%, reflecting a charge-off associated with one CRE relationship. As with the C&I portfolio, given the low absolute level of NCOs in the portfolio, some degree of volatility on a quarter-to-quarter basis is expected.

Automobile NCOs increased \$1.3 million, or 86%, reflecting a more normalized charge-off level for the portfolio. We do not believe the increase to be a reversal of the positive trends experienced in the portfolio over the past year. The relatively low levels of NCOs reflected the continued high credit quality of originations and a strong resale market for used automobiles. We anticipate continued strength in the used automobile market well into 2014.

Residential mortgage NCOs decreased \$3.8 million, or 44%, reflecting a continuation of the positive trends evident over the past year. As the absolute level of NCOs continues to decline, the portfolio will be subject to some degree of volatility on a quarter-to-quarter basis.

Home equity NCOs increased \$12.5 million, or 85%, primarily reflecting the impact of our review of the Chapter 7 bankruptcy-related losses. We will finalize this review during the 2013 fourth quarter. Excluding the Chapter 7 impact, home equity losses were consistent with our expectations. Additionally, the continued improvement in the underlying mortgage market and rising home prices had a positive impact.

38

The table below reflects NCO activity for the first nine-month periods ended September 30, 2013 and 2012:

Table 23 Year to Date Net Charge-off Analysis

Total Consultor		3.73		1.17
Net charge-offs as a % of average loans		0.46%		0.90%

2013 First Nine Months versus 2012 First Nine Months

C&I NCOs decreased \$50.6 million, or 89%, primarily reflecting credit quality improvement in the underlying portfolio, as well as our on-going proactive credit management practices. Also, the first nine-month period of 2013 reflected significant recoveries from prior charge-offs.

CRE NCOs decreased \$29.3 million, or 51%, reflecting significant recoveries during the first nine-month period of 2013. This performance is consistent with our expectations for the portfolio, as some degree of quarterly volatility is expected given the low absolute levels of NCOs in the portfolio. There was no concentration in either geography or project type.

Automobile NCOs decreased \$0.8 million, or 10%. The relatively low levels of NCOs reflected the continued high credit quality of originations and a strong resale market for used vehicles.

Home equity NCOs decreased \$29.6 million, or 32%, primarily reflecting improved delinquency rates and fewer significant dollar size losses compared to the year-ago period. The performance of the portfolio is consistent with our expectations.

Residential mortgage NCOs declined \$18.7 million, or 49%, and reflected improvement in the overall housing market compared to the year-ago period.

39

Market Risk

Market risk represents the risk of loss due to changes in market values of assets and liabilities. We incur market risk in the normal course of business through exposures to market interest rates, foreign exchange rates, equity prices, and credit spreads. We have identified two primary sources of market risk: interest rate risk and price risk.

Interest Rate Risk

OVERVIEW

Huntington actively manages interest rate risk, as changes in market interest rates can have a significant impact on reported earnings. The interest rate risk process is designed to compare income simulations in market scenarios designed to alter the direction, magnitude, and speed of interest rate changes, as well as the slope of the yield curve. These scenarios are designed to illustrate the embedded optionality in the balance sheet from, among other things, faster or slower mortgage prepayments and changes in deposit mix.

INCOME SIMULATION AND ECONOMIC VALUE ANALYSIS

Interest rate risk measurement is calculated and reported to the ALCO monthly and ROC at least quarterly. The information reported includes period-end results and identifies any policy limits exceeded, along with an assessment of the policy limit breach and the action plan and timeline for resolution, mitigation, or assumption of the risk.

Huntington uses two approaches to model interest rate risk: Interest Sensitive Earnings at Risk (ISE analysis) and Economic Value of Equity (EVE analysis). Under ISE analysis, net interest income is modeled utilizing various assumptions for assets, liabilities, and derivative positions under various interest rate scenarios over a one-year time horizon. Market implied forward rates and various likely and extreme interest rate scenarios are used for ISE analysis. These likely and extreme scenarios include rapid and gradual interest rate ramps, rate shocks and yield curve twists. EVE analysis measures the market value of assets minus the market value of liabilities, and the change in this value as rates change.

We continue to evaluate and enhance our analysis related to non-maturity deposit modeling. During the 2013 third quarter, we made several enhancements, including expanding the sample used to model deposit maturity and rates, to include the most recent ten year period. This more comprehensive data set will allow the model to better predict the maturity of and interest paid on actual deposit balances. The net result of these enhancements has been an extension of anticipated demand deposit maturities and an increase in anticipated re-pricing sensitivity for money market deposit accounts.

Deposit rates impact ISE and EVE. Due to the modeled increase in re-pricing sensitivity, the interest rate for money market deposits will more fully reflect the actual changes in market rates. Also, as the anticipated maturity for demand deposits extends, their change in value should more fully offset the change in the value of asset balances, all else being equal. The result is an ISE that is more sensitive to market rates, but an EVE that is less sensitive.

Table 24 Interest Sensitive Earnings at Risk

	Interest Sens	Interest Sensitive Earnings at Risk (
Basis point change scenario	-25	+100	+200		
Board policy limits		-2.0%	-4.0%		
September 30, 2013	-0.6	0.9	1.4		

The ISE analysis used in the table above reflects the analysis used monthly by management. It models gradual -25, +100 and +200 basis point parallel shifts in market interest rates over the next one-year period, beyond the interest rate change implied by the forward yield curve. Due to the current low level of short-term interest rates, the analysis reflects a declining interest rate scenario of 25 basis points, the point at which many assets and liabilities reach zero percent.

Huntington is within Board policy limits for the +100 and +200 basis point scenarios. There is no policy limit for the -25 basis point scenario. The ISE at risk reported at September 30, 2013, shows that Huntington is asset sensitive, meaning that earnings increase (decrease) when rates

rise (fall). The primary reason for these results is that more assets (primarily LIBOR-indexed loans to customers) than liabilities (primarily non-maturity deposits) will re-price over the modeled one-year period. These results reflect the impact of higher market rates, which slows prepayments on mortgage-related assets and extends their lives. However, as noted above, these non-maturity deposits are more sensitive to market rate changes, resulting in less asset sensitivity than in previous periods.

40

The following table shows the income sensitivity of selected assets and liabilities to changes in market interest rates. The table compares the ISE analysis for selected Huntington portfolios to a portfolio that assumes 100% sensitivity to changes in interest rates. We calculate the percent change in interest income/expense as the change in the base Huntington portfolio divided by the change in the 100% sensitive portfolio.

The asset sensitive nature of the portfolio has become less pronounced in recent periods, as fixed rate auto loans and floating rate borrowings have increased as a percentage of assets and liabilities, respectively. However, because interest sensitive liabilities account for only 65% of total funding, the table below does not reflect the contribution to asset sensitivity from non-interest bearing deposits and equity.

Table 25 Interest Income/Expense Sensitivity

	Percent of Total Earning Assets (1)	Percent Change in Interest Income/Expense For a Given Change in Interest Rates Over / (Under) Base Case Parallel Ram			
Basis point change scenario		-25	+100	+200	
Total loans Total investments and other earning assets	82% 18	-22.3% -15.1	36.7% 21.3	38.6% 19.7	
Total interest-sensitive income		-20.3	33.2	34.4	
Total interest-bearing deposits	59	-2.6	35.5	39.2	
Total borrowings	6	-57.8	67.0	70.8	
Total interest-sensitive expense		-8.9	39.1	42.8	

(1) At September 30, 2013

Table 26 Economic Value of Equity at Risk

	Economic V	at Risk (%)	
Basis point change scenario	-25	+100	+200
Board policy limits		-5.0%	-12.0%
September 30, 2013	0.1	-2.2	-6.3

The EVE analysis used in the table above reflects the analysis used monthly by management. It models immediate -25, +100 and +200 basis point parallel shifts in market interest rates. Due to the current low level of short-term interest rates, the analysis reflects a declining interest rate scenario of 25 basis points, the point at which many assets and liabilities reach zero percent.

Huntington is within Board policy limits for the +100 and +200 basis point scenarios. There is no policy limit for the -25 basis point scenario. The EVE at risk reported at September 30, 2013 shows that as interest rates increase (decrease) immediately, the economic value of equity position will decrease (increase) since the amount and duration of the assets are longer than the amount and duration of liabilities. When interest rates rise, fixed rate assets generally lose economic value; the longer the duration, the greater the value lost. The opposite is true when interest rates fall.

Compared to recent periods, the EVE results for September 30, 2013 reflect higher market rates during the year, which served to slow prepayments on mortgage-related assets and extend their lives. On the other hand, the retention on balance sheet of indirect automobile loans and the reduction of reinvestment in longer term, agency mortgage-backed securities has partly offset the impact of higher rates.

The following table details the economic value sensitivity to changes in market interest rates at September 30, 2013 for loans, investments, deposits, and borrowings. The change in economic value for each portfolio is measured as the percent change from the base economic value for that portfolio. The analysis reflects that, in a sharply higher rate scenario, total tangible assets are more sensitive to market rates than total

tangible liabilities. Investments and other earning assets contribute to this sensitivity, largely due to fixed rate securities investments.

41

Table 27 Economic Value Sensitivity

	Percent of Total Net Tangible Assets (1)	Percent Cl For a Given Over / (Unde	rest Rates	
Basis point change scenario		-25	+100	+200

- (2) Tangible assets excluding ALLL.
- (3) Tangible liabilities excluding AULC.

MSRs

(This section should be read in conjunction with Note 6 of Notes to Unaudited Condensed Consolidated Financial Statements.)

At September 30, 2013 we had a total of \$158.8 million of capitalized MSRs representing the right to service \$15.2 billion in mortgage loans. Of this \$158.8 million, \$34.1 million was recorded using the fair value method and \$124.7 million was recorded using the amortization method.

MSR fair values are very sensitive to movements in interest rates as expected future net servicing income depends on the projected outstanding principal balances of the underlying loans, which can be greatly reduced by prepayments. Prepayments usually increase when mortgage interest rates decline and decrease when mortgage interest rates rise. We have employed strategies to reduce the risk of MSR fair value changes or impairment. In addition, we engage a third party to provide valuation tools and assistance with our strategies with the objective to decrease the volatility from MSR fair value changes. However, volatile changes in interest rates can diminish the effectiveness of these hedges. We typically report MSR fair value adjustments net of hedge-related trading activity in the mortgage banking income category of noninterest income. Changes in fair value between reporting dates are recorded as an increase or a decrease in mortgage banking income.

MSRs recorded using the amortization method generally relate to loans originated with historically low interest rates, resulting in a lower probability of prepayments and, ultimately, impairment. MSR assets are included in accrued income and other assets in the Unaudited Condensed Consolidated Financial Statements

Price Risk

Price risk represents the risk of loss arising from adverse movements in the prices of financial instruments that are carried at fair value and are subject to fair value accounting. We have price risk from trading securities, securities owned by our broker-dealer subsidiaries, foreign exchange positions, equity investments, investments in securities backed by mortgage loans, and marketable equity securities held by our insurance subsidiaries. We have established loss limits on the trading portfolio, on the amount of foreign exchange exposure that can be maintained, and on the amount of marketable equity securities that can be held by the insurance subsidiaries.

Liquidity Risk

Liquidity risk is the risk of loss due to the possibility that funds may not be available to satisfy current or future commitments resulting from external macro market issues, investor and customer perception of financial strength, and events unrelated to us, such as war, terrorism, or

financial institution market specific issues. In addition, the mix and maturity structure of Huntington s balance sheet, the amount of on-hand cash and unencumbered securities, and the availability of contingent sources of funding can have an impact on Huntington s ability to satisfy current or future funding commitments. We manage liquidity risk at both the Bank and the parent company.

The overall objective of liquidity risk management is to ensure that we can obtain cost-effective funding to meet current and future obligations, and can maintain sufficient levels of on-hand liquidity, under both normal business-as-usual and unanticipated stressed circumstances. The ALCO was appointed by the ROC to oversee liquidity risk management and the establishment of liquidity risk policies and limits. Contingency funding plans are in place, which measure forecasted sources and uses of funds under

various scenarios in order to prepare for unexpected liquidity shortages. Liquidity risk is reviewed monthly for the Bank and the parent company, as well as its subsidiaries. In addition, liquidity working groups meet regularly to identify and monitor liquidity positions, provide policy guidance, review funding strategies, and oversee the adherence to, and maintenance of, the contingency funding plans.

Investment securities portfolio

The expected weighted average maturities of our AFS and HTM portfolios are significantly shorter than their contractual maturities as reflected in Note 4 and Note 5 of the Unaudited Notes to Condensed Consolidated Financial Statements. Particularly regarding the MBS and ABS, prepayments of principal and interest that historically occur in advance of scheduled maturities will shorten the expected life of these portfolios. The expected weighted average maturities, which take into account expected prepayments of principal and interest under existing interest rate conditions, are shown in the following table:

Table 28 Expected life of investment securities

		September 30, 2013							
	Available-for	-Sale & Other	Held-to-	Maturity					
	Secu	rities	Securities

Bank Liquidity and Sources of Liquidity

Our primary sources of funding for the Bank are retail and commercial core deposits. At September 30, 2013, these core deposits funded 79% of total assets (105% of total loans). At September 30, 2013 and December 31, 2012, total core deposits represented 96% and 95% of total deposits, respectively.

Core deposits are comprised of interest-bearing and noninterest-bearing demand deposits, money market deposits, savings and other domestic deposits, consumer certificates of deposit both over and under \$250,000, and nonconsumer certificates of deposit less than \$250,000. Noncore deposits consist of brokered money market deposits and certificates of deposit, foreign time deposits, and other domestic deposits of \$250,000 or more comprised primarily of public fund certificates of deposit greater than \$250,000.

Core deposits may increase our need for liquidity as certificates of deposit mature or are withdrawn before maturity and as nonmaturity deposits, such as checking and savings account balances, are withdrawn. Noninterest-bearing demand deposits increased \$0.8 billion from December 31, 2012, but include certain large commercial deposits that may be more short-term in nature.

Demand deposit overdrafts that have been reclassified as loan balances were \$19.7 million and \$17.2 million at September 30, 2013 and December 31, 2012, respectively. Other domestic time deposits of \$250,000 or more and brokered deposits and negotiable CDs totaled \$1.6 billion and \$1.9 billion at September 30, 2013 and December 31, 2012, respectively.

The following tables reflect deposit composition and short-term borrowings detail for each of the last five quarters:

Table 29 Deposit Composition

Other short-term borrowings **1.32** 1.91 2.13 1.52 1.67

To the extent we are unable to obtain sufficient liquidity through core deposits, we may meet our liquidity needs through sources of wholesale funding or asset securitization or sale. Sources of wholesale funding include other domestic time deposits of \$250,000 or more, brokered deposits and negotiable CDs, deposits in foreign offices, short-term borrowings, FHLB advances, other long-term debt, and subordinated notes. In August 2013, the Bank issued \$350.0 million of senior notes at 99.865% of face value. The senior bank note issuances mature on August 2, 2016 and have a fixed coupon rate of 1.35%. The senior note issuance may be redeemed one month prior to the maturity date at 100% of principal plus accrued and unpaid interest. At September 30, 2013, total wholesale funding was \$5.2 billion, unchanged from \$5.2 billion at December 31, 2012.

44

The Bank also has access to the Federal Reserve s discount window. These borrowings are secured by commercial loans and home equity lines-of-credit. The Bank is also a member of the FHLB, and as such, has access to advances from this facility. These advances are generally secured by residential mortgages, other mortgage-related loans, and available-for-sale securities. Information regarding amounts pledged, for the ability to borrow if necessary, and the unused borrowing capacity at both the Federal Reserve Bank and the FHLB, is outlined in the following table:

Table 31 Federal Reserve and FHLB Borrowing Capacity

(dollar amounts in billions)	September 30, 2013		mber 31, 2012
Loans and securities pledged:			
Federal Reserve Bank	\$	10.7	\$ 10.2
FHLB		8.5	8.2
Total loans and securities pledged	\$	19.2	\$ 18.4
Total unused borrowing capacity at Federal Reserve Bank and			
FHLB	\$	11.2	\$ 10.3

At September 30, 2013, we believe the Bank had sufficient liquidity to meet its cash flow obligations for the foreseeable future.

Parent Company Liquidity

The parent company s funding requirements consist primarily of dividends to shareholders, debt service, income taxes, operating expenses, funding of nonbank subsidiaries, repurchases of our stock, and acquisitions. The parent company obtains funding to meet obligations from interest received from the Bank, interest and dividends received from direct subsidiaries, net taxes collected from subsidiaries included in the federal consolidated tax return, fees for services provided to subsidiaries, and the issuance of debt securities.

At September 30, 2013 and December 31, 2012, the parent company had \$1.0 billion and \$0.9 billion, respectively, in cash and cash equivalents.

On October 18, 2013, we announced that the board of directors had declared a quarterly common stock cash dividend of \$0.05 per common share. The dividend is payable on January 2, 2014, to shareholders of record on December 19, 2013. Based on the current quarterly dividend of \$0.05 per common share, cash demands required for common stock dividends are estimated to be approximately \$41.5 million per quarter. Based on the current dividend, cash demands required for Series A Preferred Stock are estimated to be approximately \$7.7 million per quarter. Cash demands required for Series B Preferred Stock are expected to be approximately \$0.3 million per quarter.

Based on a regulatory dividend limitation, the Bank could not have declared and paid a dividend to the parent company at September 30, 2013, without regulatory approval due to the deficit position of its undivided profits. We do not anticipate that the Bank will need to pay dividends in the near future as we continue to build Bank regulatory capital above its already well-capitalized level. To help meet any additional liquidity needs, we have an open-ended, automatic shelf registration statement filed and effective with the SEC, which permits us to issue an unspecified amount of debt or equity securities.

With the exception of the items discussed above, the parent company does not have any significant cash demands. It is our policy to keep operating cash on hand at the parent company to satisfy cash demands for the next 18 months.

In August 2013, the parent company issued \$400.0 million of senior notes at 99.8% of face value. The senior note issuances mature on August 2, 2018 and have a fixed coupon rate of 2.60%. The senior note issuance may be redeemed one month prior to the maturity date at 100% of principal plus accrued and unpaid interest.

On October 24, 2013, the OCC, U.S. Treasury, FRB, and the FDIC, issued a NPR regarding the implementation of a quantitative liquidity requirement consistent with the LCR standard established by the Basel Committee on Banking Supervision. The requirements are designed to promote the short term resilience of the liquidity risk profile of banks, to which it applies. Comments on the requirement may be submitted until January 31, 2014. If implemented as proposed, the requirement will likely cause some banks, including us, to purchase additional amounts of unencumbered, high quality liquid assets, which can easily be converted into cash.

Considering the factors discussed above, and other analyses that we have performed, we believe the parent company has sufficient liquidity to meet its cash flow obligations for the foreseeable future.

Off-Balance Sheet Arrangements

In the normal course of business, we enter into various off-balance sheet arrangements. These arrangements include financial guarantees contained in standby letters-of-credit issued by the Bank and commitments by the Bank to sell mortgage loans.

Standby letters-of-credit are conditional commitments issued to guarantee the performance of a customer to a third party. These guarantees are primarily issued to support public and private borrowing arrangements, including commercial paper, bond financing, and similar transactions. Most of these arrangements mature within two years and are expected to expire without being drawn upon. Standby letters-of-credit are included in the determination of the amount of risk-based capital that the parent company and the Bank are required to hold.

Through our credit process, we monitor the credit risks of outstanding standby letters-of-credit. When it is probable that a standby letter-of-credit will be drawn and not repaid in full, a loss is recognized in the provision for credit losses. At September 30, 2013, we had \$456.6 million of standby letters-of-credit outstanding, of which 82% were collateralized. Included in this \$456.6 million are letters-of-credit issued by the Bank that support securities that were issued by our customers and remarketed by The Huntington Investment Company, our broker-dealer subsidiary.

We enter into forward contracts relating to the mortgage banking business to hedge the exposures we have from commitments to extend new residential mortgage loans to our customers and from our mortgage loans held for sale. At September 30, 2013 and December 31, 2012, we had commitments to sell residential real estate loans of \$571.7 million and \$849.8 million, respectively. These contracts mature in less than one year.

We do not believe that off-balance sheet arrangements will have a material impact on our liquidity or capital resources.

Operational Risk

As with all companies, we are subject to operational risk. Operational risk is the risk of loss due to human error; inadequate or failed internal systems and controls; violations of, or noncompliance with, laws, rules, regulations, prescribed practices, or ethical standards; and external influences such as market conditions, fraudulent activities, disasters, and security risks. We continuously strive to strengthen our system of internal controls to ensure compliance with laws, rules, and regulations, and to improve the oversight of our operational risk. For example, we actively and continuously monitor cyber-attacks such as attempts related to eFraud and loss of sensitive customer data. We evaluate internal systems, processes and controls to mitigate loss from cyber-attacks and, to date, have not experienced any material losses.

To mitigate operational risks, we have established a senior management Operational Risk Committee and a senior management Legal, Regulatory, and Compliance Committee. The responsibilities of these committees, among other duties, include establishing and maintaining management information systems to monitor material risks and to identify potential concerns, risks, or trends that may have a significant impact and ensuring that recommendations are developed to address the identified issues. Both of these committees report any significant findings and recommendations to the Risk Management Committee. Additionally, potential concerns may be escalated to our ROC, as appropriate.

The goal of this framework is to implement effective operational risk techniques and strategies, minimize operational and fraud losses, and enhance our overall performance.

Representation and Warranty Reserve

We primarily conduct our mortgage loan sale and securitization activity with FNMA and FHLMC. In connection with these and other securitization transactions, we make certain representations and warranties that the loans meet certain criteria, such as collateral type and underwriting standards. We may be required to repurchase individual loans and / or indemnify these organizations against losses due to a loan not meeting the established criteria. As part of the consumer portfolio review that was initiated during the 2013 third quarter (see Consumer Credit section for description), we continue to evaluate representation and warranty exposure of loans sold with servicing retained associated with borrowers who filed bankruptcy. We have a reserve for such losses and exposure, which is included in accrued expenses and other liabilities. The reserves are estimated based on historical and expected repurchase activity, average loss rates, and current economic trends. The level of mortgage loan repurchase losses depends upon economic factors, investor demand strategies and other external conditions containing a level of uncertainty and risk that may change over the life of the underlying loans. We currently do not have sufficient information to estimate the range of reasonably possible loss related to representation and warranty exposure.

The table below reflects activity in the representations and warranties reserve:

Table 32 Summary of Reserve for Representations and Warranties on Mortgage Loans Serviced for Others

		2013		20:	12
(dollar amounts in thousands)	Third	Second	First	Fourth	Third
Reserve for representations and warranties, beginning of period	\$ 28,039	\$ 28,932	\$ 28,588	\$ 27,468	\$ 26,298

Foreclosure Documentation

Compared to the high volume servicers, we service a relatively low volume of residential mortgage foreclosures. We have reviewed our residential foreclosure process. We have not found evidence of financial injury to any borrowers from any foreclosure by the Bank that should not have proceeded. We continuously review our processes and controls to ensure that our foreclosure processes are appropriate.

Compliance Risk

Financial institutions are subject to several laws, rules, and regulations at both the federal and state levels. These broad-based mandates include, but are not limited to, expectations relating to anti-money laundering, lending limits, client privacy, fair lending, and community reinvestment. Additionally, the volume and complexity of recent regulatory changes have increased our overall compliance risk. As such, we utilize various resources to help ensure expectations are met, including a team of compliance experts dedicated to ensuring our conformance with all applicable laws, rules, and regulations. Our colleagues receive training for several broad-based laws and regulations including, but not limited to, anti-money laundering and customer privacy. Additionally, colleagues engaged in lending activities receive training for laws and regulations related to flood disaster protection, equal credit opportunity, fair lending, and / or other courses related to the extension of credit. We set a high standard of expectation for adherence to compliance management and seek to continuously enhance our performance.

Capital

Both regulatory capital and shareholders equity are managed at the Bank and on a consolidated basis. We have an active program for managing capital and maintain a comprehensive process for assessing the Company s overall capital adequacy. We believe our current levels of both

⁽¹⁾ Loans repurchased are loans that fail to meet the purchaser s terms.

⁽²⁾ Successful disputes are a percent of close out requests.

⁽³⁾ Make whole payments are payments to reimburse for losses on foreclosed properties.

regulatory capital and shareholders equity are adequate.

Regulatory Capital

Basel III and the Dodd-Frank Act

On July 2, 2013, the FRB voted to adopt final Basel III Capital rules for U.S. banking organizations. The final rules establish an integrated regulatory capital framework and will implement in the United States the Basel III regulatory capital reforms from the Basel Committee on Banking Supervision and certain changes required by the Dodd-Frank Act. Under the final rule, minimum requirements will increase for both the quantity and quality of capital held by banking organizations. Consistent with the international Basel framework, the final rule includes a new minimum ratio of common equity tier 1 capital (Tier I Common) to risk-weighted assets and a common equity tier 1 capital conservation buffer of 2.5 percent of risk-weighted assets that will apply to all supervised financial institutions. The rule also raises the minimum ratio of tier 1 capital to risk-weighted assets and includes a minimum leverage ratio of 4 percent for all banking organizations. These new minimum capital ratios will become effective for us on January 1, 2015, and will be fully phased-in on January 1, 2019.

The final rule emphasizes Tier I Common equity, the most loss-absorbing form of capital, and implements strict eligibility criteria for regulatory capital instruments. The final rule also improves the methodology for calculating risk-weighted assets to enhance risk sensitivity. Banks and regulators use risk weighting to assign different levels of risk to different classes of assets.

We have evaluated the impact of the Basel III final rule on our regulatory capital ratios and estimate a reduction of approximately 60 basis points to our Basel I Tier I Common risk-based capital ratio based on our June 30, 2013, balance sheet composition. This estimate is based on management s current understanding, expectation, and understanding of the final U.S. Basel III rules. We anticipate that our capital ratios, on a Basel III basis, will continue to exceed the well-capitalized minimum requirements. We are evaluating options to mitigate the capital impact of the final rule prior to its effective implementation date.

Approximately \$50.0 million of our Tier 1 risk-based capital of \$6.0 billion at September 30, 2013 consisted of the outstanding Class C preferred securities of our REIT subsidiary, Huntington Preferred Capital, Inc. (HPCI). Based on our review of the Basel III final rule, it is likely that when Basel III becomes effective, the HPCI Class C preferred securities will no longer constitute Tier 1 capital for us or the Bank. In the event we determine that a regulatory capital event has occurred, based on an opinion of counsel rendered by a law firm experienced in such matters, HPCI would have the right to redeem the outstanding Class C preferred securities. In the event HPCI redeems the Class C preferred securities, holders of such securities will be entitled to receive the redemption price of \$25.00 per share plus accrued and unpaid dividends on such shares. The redemption price may differ from the redemption date market price of the Class C preferred securities. There can be no assurance as to if or when HPCI would redeem the Class C preferred securities.

Capital Planning

In 2012, we participated in the FRB s CapPR process and made our capital plan submission in January 2013. On March 14, 2013, we announced that the FRB had completed its review of our capital plan submission and did not object to our proposed capital actions. The planned actions included the potential repurchase of up to \$227.0 million of common stock and an increase of our common per share dividend from \$0.04 to \$0.05 through the 2014 first quarter.

Beginning with our Capital Plan submission in January 2014, we will be subject to the FRB s CCAR process. One of the primary additional elements of CCAR will be supervisory stress tests conducted by the FRB under different hypothetical macro-economic scenarios in addition to the stress tests routinely conducted by management. After completing its review, the FRB may object or not object to our proposed capital actions, such as plans to pay or increase common stock dividends or increase common stock repurchase programs. Beginning with our January 2014 submission, we will also be subject to the OCC s Annual Stress Test at the bank-level. The OCC stipulated that it will consult closely with the FRB to provide common stress scenarios which can be used at both the depository institution and bank holding company levels.

Capital Adequacy

The FRB establishes capital adequacy requirements, including well-capitalized standards for the Company. The OCC establishes similar capital adequacy requirements and standards for the Bank. Regulatory capital primarily consists of Tier 1 risk-based capital and Tier 2 risk-based capital. The sum of Tier 1 risk-based capital and Tier 2 risk-based capital equals our total risk-based capital.

Risk-based capital guidelines require a minimum level of capital as a percentage of risk-weighted assets . Risk-weighted assets consist of total assets plus certain off-balance sheet and market items, subject to adjustment for predefined credit risk factors. At September 30, 2013, both the Company and the Bank were well-capitalized under applicable regulatory capital adequacy guidelines.

Tier 1 common equity, a non-GAAP financial measure, is used by banking regulators, investors and analysts to assess and compare the quality and composition of our capital with the capital of other financial services companies. We use Tier 1 common equity, along with the other capital measures, to assess and monitor our capital position. Tier 1 common equity is defined as Tier 1 capital less elements of Tier 1 capital not in the form of common equity (e.g. perpetual preferred stock, noncontrolling interests in subsidiaries, and trust preferred capital debt securities).

48

The following table presents risk-weighted assets and other financial data necessary to calculate certain financial ratios, including the Tier 1 common equity ratio, which we use to measure capital adequacy.

Table 34 Capital Adequacy

		2013		20		
(dollar amounts in millions)	September 30,	June 30,	March 31,	December 31,	Sept	tember 30,

Risk weighted assets (RW11)	Ψ τυ,υυ /	Ψ το,000	Ψ τι,,,,,,,	ψ τ1,113	Ψ	10,177
Tier 1 common equity / RWA ratio (2)	10.85%	10.71%	10.62%	10.48%		10.28%
Tangible equity / tangible asset ratio (2)	9.71	9.47	9.62	9.46		9.43
Tangible common equity / tangible asset ratio (2)	9.02	8.78	8.92	8.76		8.74
Tangible common equity / RWA ratio (2)	10.40	10.15	10.34	10.20		10.14
rungione common equity / K w A ratio (2)	10.70	10.15	10.54	10.20		10.17

 $^{^{(1)}}$ Other intangible assets are net of deferred tax liability, and calculated assuming a 35% tax rate.

Our Tier 1 common equity risk-based ratio improved 37 basis points to 10.85% at September 30, 2013, compared with 10.48% at December 31, 2012. This increase primarily reflected the increase in retained earnings, partially offset by the repurchase of 16.7 million common shares and the impacts related to the payments of dividends.

⁽²⁾ Tangible equity, Tier 1 common equity, tangible common equity, and tangible assets are non-GAAP financial measures. Additionally, any ratios utilizing these financial measures are also non-GAAP. These financial measures have been included as they are considered to be critical metrics with which to analyze and evaluate financial condition and capital strength. Other companies may calculate these financial measures differently.

49

The following table presents certain regulatory capital data at both the consolidated and Bank levels for each of the past five quarters:

Table 35 Regulatory Capital Data

			2013		20	012
(dollar amounts in millions)		September 30,	June 30,	March 31,	December 31,	September 30,
Total risk-weighted assets	Consolidated	\$ 48,687	\$ 48,080	\$ 47,937	\$ 47,773	\$ 48,147
	Bank	48,570	48,026	47,842	47,676	48,033
Tier 1 risk-based capital	Consolidated	6,017	5,885	5,829	5,741	5,720
	Bank	5,540	5,343	5,162	5,003	4,818
Tier 2 risk-based capital	Consolidated	1,127	1,120	1,144	1,187	1,192
·	Bank	825	819	947	1,091	1,196
Total risk-based capital	Consolidated	7,144	7,005	6,973	6,928	6,912
	Bank	6,365	6,162	6,109	6,094	6,014
Tier 1 leverage ratio	Consolidated	10.85%	10.64%	10.57%	10.36%	10.29%
	Bank	10.01	9.68	9.38	9.05	8.68
Tier 1 risk-based capital ratio	Consolidated	12.36	12.24	12.16	12.02	11.88
•	Bank	11.41	11.13	10.79	10.49	10.03
Total risk-based capital ratio	Consolidated	14.67	14.57	14.55	14.50	14.36
	Bank	13.11	12.83	12.77	12.78	12.52

The increase in our consolidated Tier 1 risk-based capital ratios compared with December 31, 2012, primarily reflected an increase in retained earnings, partially offset by the repurchase of 16.7 million common shares and the impacts related to the payments of dividends.

Shareholders Equity

We generate shareholders equity primarily through the retention of earnings, net of dividends. Other potential sources of shareholders equity include issuances of common and preferred stock. Our objective is to maintain capital at an amount commensurate with our risk profile and risk tolerance objectives, to meet both regulatory and market expectations, and to provide the flexibility needed for future growth and business opportunities. Shareholders equity totaled \$6.0 billion at September 30, 2013, an increase of \$0.2 billion when compared with December 31, 2012.

Dividends

We consider disciplined capital management as a key objective, with dividends representing one component. Our strong capital ratios and expectations for continued earnings growth positions us to continue to actively explore additional capital management opportunities.

On October 17, 2013, our board of directors declared a quarterly cash dividend of \$0.05 per common share, payable on January 2, 2014. Also, cash dividends of \$0.05, \$0.05 and \$0.04 per common share were declared on July 18, 2013, April 17, 2013 and January 17, 2013, respectively. Our 2013 capital plan to the FRB (*see Capital Planning section above*) included quarterly common dividends of \$0.05 per common share through the 2014 first quarter.

On October 17, 2013, our board of directors declared a quarterly cash dividend on our 8.50% Series A Non-Cumulative Perpetual Convertible Preferred Stock of \$21.25 per share. The dividend is payable on January 15, 2014. Also, cash dividends of \$21.25 per share were declared on July 18, 2013, April 17, 2013 and January 17, 2013.

On October 17, 2013, our board of directors also declared a quarterly cash dividend on our Floating Rate Series B Non-Cumulative Perpetual Preferred Stock of \$7.36 per share. The dividend is payable on January 15, 2014. Also, cash dividends of \$7.42, \$7.44 and \$7.51 per share were declared on July 18, 2013, April 17, 2013 and January 17, 2013, respectively.

Share Repurchases

From time to time the board of directors authorizes the Company to repurchase shares of our common stock. Although we announce when the board of directors authorizes share repurchases, we typically do not give any public notice before we repurchase our shares. Future stock repurchases may be private or open-market repurchases, including block transactions, accelerated or delayed block transactions, forward

transactions, and similar transactions. Various factors determine the amount and timing of our share repurchases, including our capital requirements, the number of shares we expect to issue for employee benefit plans and acquisitions, market conditions (including the trading price of our stock), and regulatory and legal considerations, including the FRB s response to our capital plan.

Our board of directors has authorized a share repurchase program consistent with our capital plan of the potential repurchase of up to \$227.0 million of common stock. During the three-month period ended September 30, 2013, we repurchased 2.0 million common shares at a weighted average share price of \$8.18. During the nine-month period ended September 30, 2013, we repurchased 16.7 million common shares at a weighted average share price of \$7.46. Although Huntington has the ability to repurchase up to \$136 million of additional shares of common stock through the first quarter of 2014, we intend to continue disciplined repurchase activity consistent with our annual capital plan, our capital return objectives, and market conditions especially as those conditions impact the trading price of our common stock. We do not anticipate that the pending transaction with Camco will materially impact our repurchase activities except during the relatively limited time we will be required to be out of the market under the SEC s Regulation M.

Fair Value

Fair Value Measurements

The fair value of a financial instrument is defined as the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. Assets and liabilities carried at fair value inherently result in a higher degree of financial statement volatility. We estimate the fair value of a financial instrument using a variety of valuation methods. Where financial instruments are actively traded and have quoted market prices, quoted market prices are used for fair value. We characterize active markets as those where transaction volumes are sufficient to provide objective pricing information, with reasonably narrow bid/ask spreads, and where received quoted prices do not vary widely. When the financial instruments are not actively traded, other observable market inputs, such as quoted prices of securities with similar characteristics, may be used, if available, to determine fair value. Inactive markets are characterized by low transaction volumes, price quotations that vary substantially among market participants, or in which minimal information is released publicly. When observable market prices do not exist, we estimate fair value primarily by using cash flow and other financial modeling methods. Our valuation methods consider factors such as liquidity and concentration concerns and, for the derivatives portfolio, counterparty credit risk. Other factors such as model assumptions, market dislocations, and unexpected correlations can affect estimates of fair value. Changes in these underlying factors, assumptions, or estimates in any of these areas could materially impact the amount of revenue or loss recorded.

The FASB ASC Topic 820, Fair Value Measurements, establishes a framework for measuring the fair value of financial instruments that considers the attributes specific to particular assets or liabilities and establishes a three-level hierarchy for determining fair value based on the transparency of inputs to each valuation as of the fair value measurement date. The three levels are defined as follows:

Level 1 quoted prices (unadjusted) for identical assets or liabilities in active markets.

Level 2 inputs include quoted prices for similar assets and liabilities in active markets, quoted prices of identical or similar assets or liabilities in markets that are not active, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.

Level 3 inputs that are unobservable and significant to the fair value measurement. Financial instruments are considered Level 3 when values are determined using pricing models, discounted cash flow methodologies, or similar techniques, and at least one significant model assumption or input is unobservable.

At the end of each quarter, we assess the valuation hierarchy for each asset or liability measured. As necessary, assets or liabilities may be transferred within hierarchy levels due to changes in availability of observable market inputs at the measurement date. The fair values measured at each level of the fair value hierarchy, additional discussion regarding fair value measurements, and a brief description of how fair value is determined for categories that have unobservable inputs, can be found in Note 14 of the Notes to Unaudited Condensed Consolidated Financial Statements.

BUSINESS SEGMENT DISCUSSION

Overview

We have four major business segments: Retail and Business Banking; Regional and Commercial Banking; Automobile Finance and Commercial Real Estate; and Wealth Advisors, Government Finance, and Home Lending. A Treasury / Other function also includes our insurance business and other unallocated assets, liabilities, revenue, and expenses. While this section reviews financial performance from a business segment perspective, it should be read in conjunction with the Discussion of Results of Operations, Note 19 of the Notes to Unaudited Condensed Consolidated Financial Statements, and other sections for a full understanding of our consolidated financial performance.

Business segment results are determined based upon our management reporting system, which assigns balance sheet and income statement items to each of the business segments. The process is designed around our organizational and management structure and, accordingly, the results derived are not necessarily comparable with similar information published by other financial institutions.

Optimal Customer Relationship (OCR)

Our OCR initiative is a cross-business segment strategy designed to increase overall customer profitability and retention by deepening product and service penetration to consumer and commercial customers. We believe this can be accomplished by taking our broad array of services and products and delivering them through a rigorous and disciplined sales management process that is consistent across all business segments and regions. It is also supported by robust sales and referral technology.

OCR was introduced in late 2009. Through 2010, much of the effort was spent on defining processes, sales training, and systems development to fully capture and measure OCR performance metrics. In 2011, we introduced OCR-related metrics for commercial relationships, which complements the previously disclosed consumer OCR-related metrics. In 2013, we continue to experience strong consumer household and commercial relationship growth.

CONSUMER OCR PERFORMANCE

For consumer OCR performance, there are three key performance metrics: (1) the number of checking account households, (2) the number of services penetration per consumer checking account household, and (3) the revenue generated. Consumer households from all business segments are included.

The growth in consumer checking account number of households is a result of both new sales of checking accounts and improved retention of existing checking account households. The overall objective is to grow the number of households, along with an increase in product penetration.

We use the checking account since it typically represents the primary banking relationship product. We count additional products by type, not number of products. For example, a household that has one checking account and one mortgage, we count as having two services. A household with four checking accounts, we count as having one service. The household relationship utilizing four or more services is viewed to be more profitable and loyal. The overall objective, therefore, is to decrease the percentage of 1-3 services per consumer checking account household, while increasing the percentage of those with 4 or more services. Since we have made significant strides toward having the vast majority of our customers with 4+ products, during the 2013 second quarter, we changed our measurement to 6+ products. We are holding ourselves to a higher performance standard.

The following table presents consumer checking account household OCR metrics:

Table 36 Consumer Checking Household OCR Cross-sell Report

		2013		2012		
	Third	Second	First	Fourth	Third	
Number of households	1,314,587	1,291,177	1,265,086	1,228,812	1,203,508	
Product Penetration by Number of Services						
(1)						
1 Service	3.2%	3.3%	2.7%	3.1%	4.3%	

Edgar Filing: HUNTINGTON BANCSHARES INC/MD - Form 10-Q

2-3 Services	19.5	19.9	17.3	18.6	19.8
4-5 Services	30.0	30.1	29.3	31.1	31.3
6+ Services	47.3	46.7	50.7	47.2	44.6
Total revenue (in millions)	\$ 237.1	\$ 239.1	\$ 239.4	\$ 251.2	\$ 246.0

(1) The definitions and measurements used in our OCR process are periodically reviewed and updated prospectively.

Our emphasis on cross-sell, coupled with customers increasingly being attracted by our Fair Play banking philosophy with benefits such as 24-Hour Grace® on overdrafts and Asterisk-Free Checking, are having a positive effect as the number of households increased by 7% from the end of last year. The percent of consumer households with 6 or more products at the end of the 2013 third quarter was 47.3%, up from 46.7% at June 30, 2013 and 47.2% at December 31, 2012 due to increased product sales and services provided. Total consumer checking account household revenue in the 2013 third quarter was \$237.1 million, down less than 1% from the 2013 second quarter, primarily related to typical seasonality. Total consumer checking account household revenue was down \$8.9 million, or 4%, from the year-ago quarter, primarily due to the February 2013 implementation of a new posting order for consumer transaction accounts.

COMMERCIAL OCR PERFORMANCE

For commercial OCR performance, there are three key performance metrics: (1) the number of commercial relationships, (2) the number of services penetration per commercial relationship, and (3) the revenue generated. Commercial relationships include relationships from all business segments.

The growth in the number of commercial relationships is a result of both new sales of checking accounts and improved retention of existing commercial accounts. The overall objective is to grow the number of relationships, along with an increase in product service distribution.

The commercial relationship is defined as a business banking or commercial banking customer with a checking account relationship. We use this metric because we believe that the checking account anchors a business relationship and creates the opportunity to increase our cross-sell. Multiple sales of the same type of product are counted as one product, the same as consumer.

The following table presents commercial relationship OCR metrics:

Table 37 Commercial Relationship OCR Cross-sell Report

	2013			2012			
	Third	Second	First	Fourth	Third		
Commercial Relationships (1)	159,878	158,010	155,584	151,083	149,333		
Product Penetration by Number of Services (2)							
1 Service	22.1%	22.8%	23.7%	24.6%	25.9%		
2-3 Services	41.1	40.9	40.2	40.4	40.6		
4+ Services	36.8	36.3	36.1	35.0	33.5		
Total revenue (in millions)	\$ 193.9	\$ 178.6	\$ 175.1	\$ 189.8	\$ 175.7		

- (1) Checking account required.
- (2) The definitions and measurements used in our OCR process are periodically reviewed and updated prospectively.

53

By focusing on targeted relationships we are able to achieve higher product service distribution among our commercial relationships, but leverage these relationships to generate a deeper share of wallet. The percent of commercial relationships utilizing 4 or more products at the end of 2013 third quarter was 36.8%, up from 33.5% from the end of last year. For the first nine-month period of 2013, commercial relationships grew 7%. Total commercial relationship revenue in the 2013 third quarter was \$193.9 million, up \$15.3 million, or 9%, from the 2013 second quarter, and up \$18.2 million, or 10%, from the year-ago quarter. This reflects a \$0.4 billion, or 2%, increase in commercial loans and increased customer transaction activity.

Revenue Sharing

Revenue is recorded in the business segment responsible for the related product or service. Fee sharing is recorded to allocate portions of such revenue to other business segments involved in selling to, or providing service to, customers. Results of operations for the business segments reflect these fee sharing allocations.

Expense Allocation

The management accounting process that develops the business segment reporting utilizes various estimates and allocation methodologies to measure the performance of the business segments. Expenses are allocated to business segments using a two-phase approach. The first phase consists of measuring and assigning unit costs (activity-based costs) to activities related to product origination and servicing. These activity-based costs are then extended, based on volumes, with the resulting amount allocated to business segments that own the related products. The second phase consists of the allocation of overhead costs to all four business segments from Treasury / Other. We utilize a full-allocation methodology, where all Treasury / Other expenses, except those related to our insurance business, reported Significant Items (except for the goodwill impairment), and a small amount of other residual unallocated expenses, are allocated to the four business segments.

Funds Transfer Pricing (FTP)

We use an active and centralized FTP methodology to attribute appropriate net interest income to the business segments. The intent of the FTP methodology is to eliminate all interest rate risk from the business segments by providing matched duration funding of assets and liabilities. The result is to centralize the financial impact, management, and reporting of interest rate and liquidity risk in the Treasury / Other function where it can be centrally monitored and managed. The Treasury / Other function charges (credits) an internal cost of funds for assets held in (or pays for funding provided by) each business segment. The FTP rate is based on prevailing market interest rates for comparable duration assets (or liabilities), and includes an estimate for the cost of liquidity (liquidity premium). Deposits of an indeterminate maturity receive an FTP credit based on a combination of vintage-based average lives and replicating portfolio pool rates. Other assets, liabilities, and capital are charged (credited) with a four-year moving average FTP rate. The denominator in the net interest margin calculation has been modified to add the amount of net funds provided by each business segment for all periods presented.

Treasury / Other

The Treasury / Other function includes revenue and expense related to our insurance business and assets, liabilities, and equity not directly assigned or allocated to one of the four business segments. Other assets include investment securities and bank owned life insurance. The financial impact associated with our FTP methodology, as described above, is also included.

Net interest income includes the impact of administering our investment securities portfolios and the net impact of derivatives used to hedge interest rate sensitivity. Noninterest income includes insurance income, miscellaneous fee income not allocated to other business segments, such as bank owned life insurance income and any investment security and trading asset gains or losses. Noninterest expense includes any insurance-related expenses, as well as certain corporate administrative, merger, and other miscellaneous expenses not allocated to other business segments. The provision for income taxes for the business segments is calculated at a statutory 35% tax rate, though our overall effective tax rate is lower. As a result, Treasury / Other reflects a credit for income taxes representing the difference between the lower actual effective tax rate and the statutory tax rate used to allocate income taxes to the business segments.

The \$41.6 million, or 44%, year over year increase in net income for Treasury/Other was primarily the result of the FTP process described above partially offset by an increase in personnel costs.

Net Income by Business Segment

We reported net income of \$480.9 million during the first nine-month period of 2013. This compared with net income of \$473.7 million during the first nine-month period of 2012. The segregation of net income by business segment for the first nine-month period of 2013 and 2012 is

presented in the following table:

54

2013 First Nine Months vs. 2012 First Nine Months

Retail and Business Banking reported net income of \$51.8 million in the first nine-month period of 2013. This was a decrease of \$21.2 million, or 29%, when compared to the year-ago period. The decrease in net income reflected a combination of factors described below.

The decrease in net interest income from the year-ago period reflected:

22 basis point decrease in the net interest margin. This decrease was mainly due to a 26 basis point decrease in deposit spreads that resulted from a reduction in the funds transfer prices rates assigned to those deposits.

Partially offset by:

\$0.3 billion, or 1%, increase in total average deposits.

9 basis points increase in loan spreads, driven by a reduction in the funds transfer price assigned to loans. The decrease in total average loans and leases from the year-ago period reflected:

\$52 million, or 1%, decrease in commercial loans primarily due to increased payoff activity in the acquired Fidelity portfolio. Partially offset by:

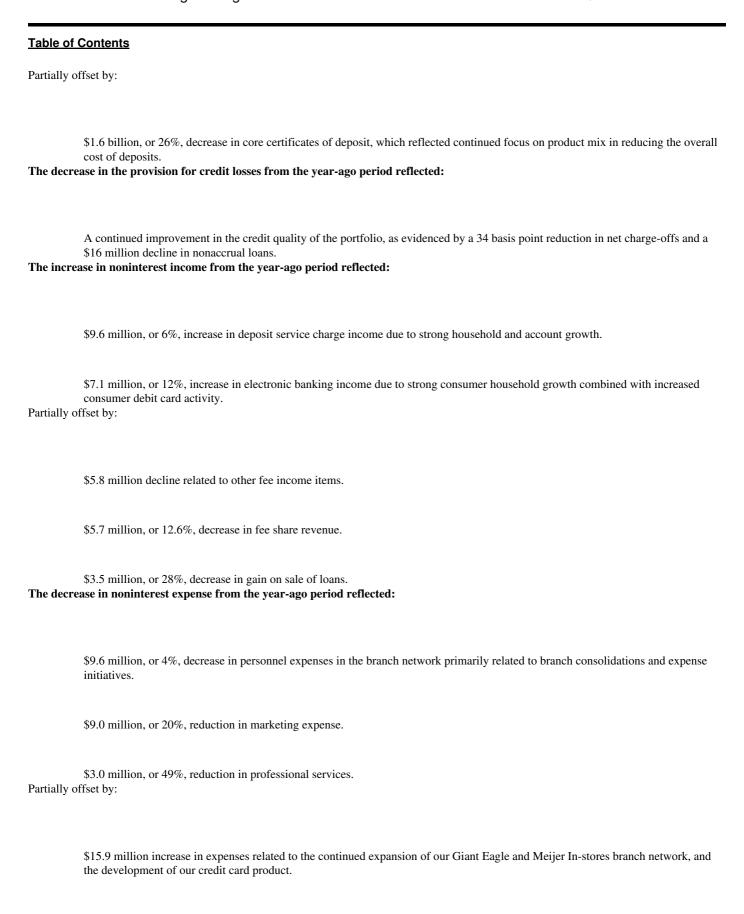

\$20 million, or 0.2%, increase in consumer loans which reflected growth in residential mortgages and consumer first-lien refinance loans.

The increase in total average deposits from the year-ago period reflected:

\$1.0 billion, or 14%, increase in money market deposits.

\$0.8 billion, or 8%, increase in demand deposits.

57

58

Return on average common equity	9.5	11.3	(1.8)	(16)

2013 First Nine Months vs. 2012 First Nine Months

Regional and Commercial Banking reported net income of \$74.6 million in the first nine-month period of 2013. This was an increase of \$1.8 million, or 2%, compared to the year-ago period. The increase in net income reflected a combination of factors described below.

The increase in net interest income from the year-ago period reflected:

\$1.1 billion, or 11%, increase in total average loans and leases.

\$0.6 billion, or 13%, increase in average total deposits. Partially offset by:

19 basis point decrease in the net interest margin due to compressed deposit spreads resulting from declining rates and reduced funds transfer prices rates, partially offset by a small increase on the commercial loan spread.

The increase in total average loans and leases from the year-ago period reflected:

\$0.4 billion, or 20%, increase in the equipment finance portfolio average balance, which reflected our focus on developing vertical strategies in business aircraft, rail industry, lender finance, and syndications.

\$0.4 billion, or 39%, increase in the healthcare portfolio average balance due to strategic focus on the banking needs of the healthcare industry, specifically targeting alternate site real estate, seniors real estate, medical technology, community hospitals, metro hospitals, and health care services.

\$0.2 billion, or 5%, in the middle market portfolio average balance primarily in our major metro markets overcoming a \$0.3 billion or 7% reduction in the funded balances of lines of credit due to a reduction in the average utilization rate.

59

Partia	11v	offset	h	J
i aiua.	шу	OHSCL	יט	γ.

\$0.2 billion, or 42%, decrease in commercial loans managed by SAD, which reflected improved credit quality in the portfolio. The increase in total average deposits from the year-ago period reflected:

\$0.6 billion, or 13%, increase in core deposits, which primarily reflected a \$0.3 billion increase in noninterest-bearing demand deposits. Regional and Commercial Banking initiated a strategic focus to gain a deeper share of wallet with certain key relationships. This focus was specifically targeted to liquidity solutions for these customers and resulted in significant deposit growth. Middle market accounts, such as not-for-profit universities and healthcare, contributed \$0.5 billion of the balance growth, while large corporate accounts contributed \$0.1 billion.

The decrease in the provision for credit losses from the year-ago period reflected:

A continued improvement in the credit quality of the portfolio, as evidenced by a 42 basis point reduction in NCOs and a \$34 million decline in NALs.

Partially offset by:

A 2013 third quarter increase in provision expense, as a result of our enhanced commercial risk rating system that increases the granularity of the risk ratings resulting in an increase in the portfolio risk rating profile, as well as an overall net increase in the exposure at default assumption included in the AULC component of our allowance calculation. However, there was a net reduction in loss given default rates within the C&I portfolio due to the incorporation of current collateral values in the risk determination process.

The increase in noninterest income from the year-ago period reflected:

\$6.8 million, or 31%, increase in commitment and other loan fees primarily reflecting increased syndications activity.

\$3.3 million, or 630%, increase in equipment finance fee income primarily driven by an increase in equipment lease termination income attributed to continued growth in the portfolio.

Partially offset by:

\$3.1 million, or 10%, decrease in deposit service charge income and other Treasury Management related revenue reflecting the impact of earnings credits by our customers.

\$1.3 million, or 4%, decrease in capital markets related income attributed to a \$2.2 million, or 13%, decrease in sales of customer interest rate protection products, partially offset by a \$0.8 million or 10% increase in foreign exchange revenue.

The increase in noninterest expense from the year-ago period reflected:

\$10.8 million, or 14%, increase in personnel costs, primarily attributable to our strategic investments in our core footprint markets, vertical strategies, and product capabilities.

\$4.9 million, or 28%, increase in allocated overhead.

\$2.6 million, or 41%, increase in outside data processing and other services, primarily attributed to Treasury Management products and services, such as the new Commercial Card product implemented in 2013.

Partially offset by:

\$1.7 million, or 19%, decrease in credit quality related expenses reflecting the continued improvement in the commercial loan portfolio as evidenced by a 42% reduction in the average balance of the SAD portfolio compared to the year ago period.

Return on average common equity	40.9	38.6	2.3	6

2013 First Nine Months vs. 2012 First Nine Months

AFCRE reported net income of \$168.7 million in the first nine-month period of 2013. This was a decrease of \$4.8 million, or 3%, compared to the year-ago period. The decrease in net income reflected a combination of factors described below.

The decrease in net interest income from the year ago period reflected:

\$0.6 billion, or 75%, decrease in average loans held for sale related to automobile loan securitization activities.

\$0.4 billion, or 3%, increase in average loans reflecting a \$0.7 billion, or 15%, decrease in commercial real estate loans offset by a \$0.9 billion, or 19%, increase in automobile loans and a \$0.2 billion, or 17%, increase in automobile floor plan loans.

4 basis point increase in the net interest margin. This increase primarily reflected purchase accounting adjustments related to certain acquired commercial and commercial real estate loan portfolios, as well as the continuation of our risk-based pricing strategies in the CRE portfolio and maintaining our pricing discipline on automobile loan originations.

The increase in the reduction in allowance for credit losses from the year-ago period reflected:

A \$38.7 million decrease in net charge-offs primarily due to a net overall improvement in the real estate market. The market improvement is reflected in both the number of defaults and the LGD rates, which are driven primarily by real estate recovery rates. Under our enhanced reserve methodology, these rates are now applied on a more granular basis based on type of collateral securing the loan and more fully incorporate the LTV position in the collateral.

Partially offset by:

A \$17.3 million reduction in the levels of reserve releases associated with declines in non-performing loans. During the first nine month period of 2013, NALs declined by \$35.0 million as compared to \$91.0 million in the year ago period.

The decrease in noninterest income from the year-ago period reflected:

\$24.9 million, or 100%, decrease in gains on sales of loans resulting from the securitization and sale of \$1.5 billion of indirect auto loans during the first nine months of 2012, with no similar transactions occurring in 2013.

61

Table of Contents

\$6.8 million, or 78%, decrease in operating lease income resulting from the continued runoff of that portfolio, as we exited that business at the end of 2008.

The decrease in noninterest expense from the year-ago period reflected:

\$5.2 million, or 78%, decrease in operating lease expense resulting from the continued runoff of that portfolio.

62

2013 First Nine Months vs. 2012 First Nine Months

WGH reported net income of \$48.8 million in the first nine-month period of 2013. This was a decrease of \$10.2 million, or 17%, when compared to the year-ago period. The decrease in net income reflected a combination of factors described below.

The decrease in net interest income from the year-ago period reflected:

11 basis point decrease in the net interest margin, primarily due to compressed deposit margins resulting from declining rates and reduced FTP rates.

\$0.1 billion, or 2%, decrease in average total loans and leases. Partially offset by:

\$0.1 billion, or 1%, increase in average total deposits.

The decrease in provision for credit losses reflected:

eop End of Period.

\$29.7 million, or 11%, decrease in delinquencies.

\$14.0 million, or 9%, decrease in classified assets, which includes a small number of large balance loans.

\$13.9 million, or 42%, decline in NCOs.

63

1110	ucci cusc	***	monnine cst	meome	11 0111	LIIL	year ago	periou	i ciiccica.

\$24.7 million, or 23%, decrease in mortgage banking income due to a higher percentage of mortgages retained on the balance sheet and narrower spread on production.

Partially offset by:

\$5.5 million, or 71%, increase in other income, primarily due to a gain on sale of certain Low Income Housing Tax Credit investments.

\$1.2 million, or 18%, increase in service charges on deposit accounts.

The decrease in noninterest expense from the year-ago period reflected:

\$2.3 million, or 9%, decrease in outside data processing and other services expense.

\$2.2 million, or 4%, decrease in other expenses, primarily due lower mortgage repurchase expense. Partially offset by:

\$4.0 million, or 3%, increase in personnel costs.

ADDITIONAL DISCLOSURES

Forward-Looking Statements

This report, including MD&A, contains certain forward-looking statements, including certain plans, expectations, goals, projections, and statements, which are subject to numerous assumptions, risks, and uncertainties. Statements that do not describe historical or current facts, including statements about beliefs and expectations, are forward-looking statements. Forward-looking statements may be identified by words such as expect, anticipate, believe, intend, estimate, plan, target, goal, or similar expressions, or future or conditional verbs such as will, may, might, should, would, could, or similar variations. The forward-looking statements are intended to be subject to the safe harbor provided by Section 27A of the Securities Act of 1933, Section 21E of the Securities Exchange Act of 1934, and the Private Securities Litigation Reform Act of 1995.

While there is no assurance that any list of risks and uncertainties or risk factors is complete, below are certain factors which could cause actual results to differ materially from those contained or implied in the forward-looking statements: (1) worsening of credit quality performance due to a number of factors such as the underlying value of collateral that could prove less valuable than otherwise assumed and assumed cash flows may be worse than expected; (2) changes in general economic, political, or industry conditions; uncertainty in U.S. fiscal and monetary policy, including the interest rate policies of the Federal Reserve Board; volatility and disruptions in global capital and credit markets; (3) movements in interest rates; (4) competitive pressures on product pricing and services; (5) success, impact, and timing of our business strategies, including market acceptance of any new products or services implementing our Fair Play banking philosophy; (6) changes in accounting policies and principles and the accuracy of our assumptions and estimates used to prepare our financial statements; (7) extended disruption of vital infrastructure; (8) the final outcome of significant litigation; (9) the nature, extent, timing, and results of governmental actions, examinations, reviews, reforms, regulations, and interpretations, including those related to the Dodd-Frank Wall Street Reform and Consumer Protection Act and the Basel III regulatory capital reforms, as well as those involving the OCC, Federal Reserve, and CFPB; and (10) the outcome of judicial and regulatory decisions regarding practices in the residential mortgage industry, including among other things the processes followed for foreclosing residential mortgages. Additional factors that could cause results to differ materially from those described above can be found in our 2012 Annual Report on Form 10-K and documents subsequently filed by us with the Securities and Exchange Commission.

All forward-looking statements speak only as of the date they are made and are based on information available at that time. We assume no obligation to update forward-looking statements to reflect circumstances or events that occur after the date the forward-looking statements were made or to reflect the occurrence of unanticipated events except as required by federal securities laws. As forward-looking statements involve significant risks and uncertainties, caution should be exercised against placing undue reliance on such statements.

Non-Regulatory Capital Ratios

In addition to capital ratios defined by banking regulators, the Company considers various other measures when evaluating capital utilization and adequacy, including:

Tangible common equity to tangible assets,

Tier 1 common equity to risk-weighted assets using Basel I and Basel III definitions, and

Tangible common equity to risk-weighted assets using Basel I definition.

These non-regulatory capital ratios are viewed by management as useful additional methods of reflecting the level of capital available to withstand unexpected market conditions. Additionally, presentation of these ratios allows readers to compare the Company's capitalization to other financial services companies. These ratios differ from capital ratios defined by banking regulators principally in that the numerator excludes preferred securities, the nature and extent of which varies among different financial services companies. These ratios are not defined in Generally Accepted Accounting Principles (GAAP) or federal banking regulations. As a result, these non-regulatory capital ratios disclosed by the Company may be considered non-GAAP financial measures.

Because there are no standardized definitions for these non-regulatory capital ratios, the Company s calculation methods may differ from those used by other financial services companies. Also, there may be limits in the usefulness of these measures to investors. As a result, the Company

encourages readers to consider the consolidated financial statements and other financial information contained in this Form 10-Q in their entirety, and not to rely on any single financial measure. Basel III Tier 1 common capital ratio estimates are based on management s current interpretation, expectations, and understanding of the final U.S. Basel III rules adopted by the Federal Reserve Board and released on July 2, 2013.

65

Risk Factors

Information on risk is discussed in the Risk Factors section included in Item 1A of our 2012 Form 10-K. Additional information regarding risk factors can also be found in the Risk Management and Capital discussion of this report.

Critical Accounting Policies and Use of Significant Estimates

Our financial statements are prepared in accordance with GAAP. The preparation of financial statements in conformity with GAAP requires us to establish critical accounting policies and make accounting estimates, assumptions, and judgments that affect amounts recorded and reported in our financial statements. Note 1 of Notes to Consolidated Financial Statements included in our 2012 Form 10-K, as supplemented by this report, lists significant accounting policies we use in the development and presentation of our financial statements. This MD&A, the significant accounting policies, and other financial statement disclosures identify and address key variables and other qualitative and quantitative factors necessary for an understanding and evaluation of our company, financial position, results of operations, and cash flows.

An accounting estimate requires assumptions about uncertain matters that could have a material effect on the financial statements if a different amount within a range of estimates were used or if estimates changed from period to period. Estimates are made under facts and circumstances at a point in time, and changes in those facts and circumstances could produce results that significantly differ from when those estimates were made.

Our most significant accounting estimates relate to our ACL, income taxes and deferred tax assets, and fair value measurements of investment securities, goodwill, pension, and other real estate owned. These significant accounting estimates and their related application are discussed in our 2012 Form 10-K.

Recent Accounting Pronouncements and Developments

Note 2 to the Unaudited Condensed Consolidated Financial Statements discusses new accounting pronouncements adopted during 2013 and the expected impact of accounting pronouncements recently issued but not yet required to be adopted. To the extent the adoption of new accounting standards materially affect financial condition, results of operations, or liquidity, the impacts are discussed in the applicable section of this MD&A and the Notes to Unaudited Condensed Consolidated Financial Statements.

Huntington Bancshares Incorporated

Notes to Unaudited Condensed Consolidated Financial Statements

1. BASIS OF PRESENTATION

The accompanying Unaudited Condensed Consolidated Financial Statements of Huntington reflect all adjustments consisting of normal recurring accruals which are, in the opinion of Management, necessary for a fair presentation of the consolidated financial position, the results of operations, and cash flows for the periods presented. These Unaudited Condensed Consolidated Financial Statements have been prepared according to the rules and regulations of the SEC and, therefore, certain information and footnote disclosures normally included in annual financial statements prepared in accordance with GAAP have been omitted. The Notes to Consolidated Financial Statements appearing in Huntington s 2012 Form 10-K, which include descriptions of significant accounting policies, as updated by the information contained in this report, should be read in conjunction with these interim financial statements.

For statement of cash flows purposes, cash and cash equivalents are defined as the sum of Cash and due from banks which includes amounts on deposit with the Federal Reserve and Federal funds sold and securities purchased under resale agreements.

In conjunction with applicable accounting standards, all material subsequent events have been either recognized in the Unaudited Condensed Consolidated Financial Statements or disclosed in the Notes to Unaudited Condensed Consolidated Financial Statements.

2. ACCOUNTING STANDARDS UPDATE

ASU 2011-11 Balance Sheet (Topic 210): Disclosures about Offsetting Assets and Liabilities. The ASU amends Topic 210 by requiring additional improved information to be disclosed regarding financial instruments and derivative instruments that are offset in accordance with the conditions under ASC 210-20-45 or ASC 810-10-45 or subject to an enforceable master netting arrangement or similar agreement. The amendments are effective for annual and interim reporting periods beginning on or after January 1, 2013. The disclosures required by the amendments were applied retrospectively for all comparative periods presented (See Note 15). The amendments did not have a material impact on Huntington s Condensed Consolidated Financial Statements.

ASU 2013-01 Balance Sheet (Topic 210): Clarifying the Scope of Disclosures about Offsetting Assets and Liabilities. The ASU amends Update 2011-11 to clarify that the scope applies to derivatives, repurchase and reverse repurchase agreements, and securities borrowing and lending transactions that are either offset in accordance with Section 210-20-45 or Section 815-10-45 or subject to master netting or similar arrangements. Other types of financial assets and liabilities subject to master netting or similar arrangements are not subject to the disclosure requirements in Update 2011-11. The amendments are effective for fiscal years beginning on or after January 1, 2013, and interim periods within those annual periods (See Note 15). The amendments did not have a material impact on Huntington s Condensed Consolidated Financial Statements.

ASU 2013-02 Comprehensive Income (Topic 220): Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income. The ASU requires an entity to provide information about the amounts reclassified out of accumulated other comprehensive income by component. In addition, an entity is required to present, either on the face of the statement where net income is presented or in the notes, significant amounts reclassified out of accumulated other comprehensive income by the respective line items of net income but only if the amount reclassified is required under U.S. GAAP to be reclassified to net income in its entirety in the same reporting period. The amendments are effective prospectively for reporting periods beginning after December 15, 2012 (See Note 9). The amendments did not have a material impact on Huntington s Condensed Consolidated Financial Statements

ASU 2013-11 Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. The ASU requires that an unrecognized tax benefit, or a portion of an unrecognized tax benefit, be presented in the financial statements as a reduction to a deferred tax asset for a net operating loss carryforward, a similar tax loss, or a tax credit carryforward. However, if a net operating loss carryforward, a similar tax loss, or a tax credit carryforward is not available at the reporting date under the tax law of the applicable jurisdiction to settle any additional income taxes that would result from the disallowance of a tax position or the tax law of the applicable jurisdiction does not require the entity to use, and the entity does not intend to use, the deferred tax asset for such purpose, the unrecognized tax benefit should be presented in the financial statements as a liability and should not be combined with deferred tax assets. The amendments are effective for fiscal years, and interim periods within those years, beginning after December 15, 2013. The amendments will not have a material impact on Huntington s Condensed Consolidated Financial Statements.

3. LOANS / LEASES AND ALLOWANCE FOR CREDIT LOSSES

Loans and leases for which Huntington has the intent and ability to hold for the foreseeable future, or until maturity or payoff, are classified in the Unaudited Condensed Consolidated Balance Sheets as loans and leases. Except for loans which are accounted for at fair value, loans and leases are carried at the principal amount outstanding, net of unamortized deferred loan origination fees and costs and net of unearned income. At September 30, 2013, and December 31, 2012, the aggregate amount of these net unamortized deferred loan origination fees and costs and net unearned income was \$172.5 million and \$174.5 million, respectively.

72

Loan and Lease Portfolio Composition

The following table provides a detailed listing of Huntington s loan and lease portfolio at September 30, 2013 and December 31, 2012:

(dollar amounts in thousands)	September 30, 2013	December 31, 2012
Loans and leases:		
Commercial and industrial	\$ 17,334,533	\$ 16,970,689
Commercial real estate	4,872,725	5,399,240
Automobile	6,317,112	4,633,820
Home equity	8,346,685	8,335,342
Residential mortgage	5,306,964	4,969,672
Other consumer	377,814	419,662
Loans and leases	42,555,833	40,728,425
Allowance for loan and lease losses	(666,030)	(769,075)
Net loans and leases	\$ 41,889,803	\$ 39,959,350

As shown in the table above, the primary loan and lease portfolios are: C&I, CRE, automobile, home equity, residential mortgage, and other consumer. For ACL purposes, these portfolios are further disaggregated into classes. The classes within each portfolio are as follows:

Portfolio Commercial and industrial	Class Owner occupied Purchased credit-impaired Other commercial and industrial
Commercial real estate	Retail properties Multi family Office Industrial and warehouse Purchased credit-impaired Other commercial real estate
Automobile	NA (1)
Home equity	Secured by first-lien Secured by junior-lien
Residential mortgage	Residential mortgage Purchased credit-impaired
Other consumer	Other consumer Purchased credit-impaired

(1) Not applicable. The automobile loan portfolio is not further segregated into classes.

Fidelity Bank acquisition

On March 30, 2012, Huntington acquired the loans of Fidelity Bank located in Dearborn, Michigan from the FDIC. Under the agreement, loans with a fair value of \$523.9 million were transferred to Huntington. These loans were recorded at fair value in accordance with applicable accounting guidance, ASC 805. The fair values for the loans were estimated using discounted cash flow analyses using interest rates currently being offered for loans with similar terms (Level 3), and reflected an estimate of probable losses and the credit risk associated with the loans.

Purchased Credit-Impaired Loans

Purchased loans with evidence of deterioration in credit quality since origination for which it is probable at acquisition that we will be unable to collect all contractually required payments are considered to be credit impaired. Purchased credit-impaired loans are initially recorded at fair value, which is estimated by discounting the cash flows expected to be collected at the acquisition date. Because the estimate of expected cash flows reflects an estimate of future credit losses expected to be incurred over the life of the loans, an allowance for credit losses is not recorded at the acquisition date. The excess of cash flows expected at acquisition over the estimated fair value, referred to as the accretable yield, is recognized in interest income over the remaining life of the loan, or pool of loans, on a level-yield basis. The difference between the contractually required payments at acquisition and the cash flows expected to be collected at acquisition is referred to as the nonaccretable difference. A subsequent decrease in the estimate of cash flows expected to be received on purchased credit-impaired loans generally results in the recognition of an allowance for credit losses. Subsequent increases in cash flows result in reversal of any nonaccretable difference (or allowance for loan and lease losses to the extent any has been recorded) with a positive impact on interest income subsequently recognized. The measurement of cash flows involves assumptions and judgments for interest rates, prepayments, default rates, loss severity, and collateral values. All of these factors are inherently subjective and significant changes in the cash flow estimates over the life of the loan can result.

The following table presents a rollforward of the accretable yield for three-month and nine-month periods ended September 30, 2013 and 2012:

	Thre	e Months End	ed Se	ptember 30,	Nine	Months Ende	ed Sep	otember 30,
(dollar amounts in thousands)		2013		2012		2013		2012

NALs and Past Due Loans												

Loans are considered past due when the contractual amounts due with respect to principal and interest are not received within 30 days of the contractual due date.

Any loan in any portfolio may be placed on nonaccrual status prior to the policies described below when collection of principal or interest is in doubt. When a borrower with debt is discharged in a Chapter 7 bankruptcy and not reaffirmed by the borrower, the loan is determined to be collateral dependent and placed on nonaccrual status.

All classes within the C&I and CRE portfolios (except for purchased credit-impaired loans) are placed on nonaccrual status at 90-days past due. Residential mortgage loans are placed on nonaccrual status at 150-days past due, with the exception of residential mortgages guaranteed by government organizations which continue to accrue interest at the rate guaranteed by the government agency. First-lien home equity loans are placed on nonaccrual status at 150-days past due. Junior-lien home equity loans are placed on nonaccrual status at the earlier of 120-days past due or when the related first-lien loan has been identified as nonaccrual. Automobile and other consumer loans are generally charged-off when the loan is 120-days past due.

For all classes within all loan portfolios, when a loan is placed on nonaccrual status, any accrued interest income is reversed with current year accruals charged to interest income, and prior year amounts charged-off as a credit loss.

For all classes within all loan portfolios, cash receipts received on NALs are applied entirely against principal until the loan or lease has been collected in full, after which time any additional cash receipts are recognized as interest income. However, for secured non-reaffirmed debt in a Chapter 7 bankruptcy, payments are applied to principal and interest when the borrower has demonstrated a capacity to continue payment of the debt and collection of the debt is reasonably assured. For unsecured non-reaffirmed debt in a Chapter 7 bankruptcy where the carrying value has been fully charged-off, payments are recorded as loan recoveries.

Regarding all classes within the C&I and CRE portfolios, the determination of a borrower s ability to make the required principal and interest payments is based on an examination of the borrower s current financial statements, industry, management capabilities, and other qualitative measures. For all classes within the consumer loan portfolio, the determination of a borrower s ability to make the required principal and interest payments is based on multiple factors, including number of days past due and, in some instances, an evaluation of the borrower s financial condition. When, in Management s judgment, the borrower s ability to make required principal and interest payments resumes and collectability is no longer in doubt, the loan or lease is returned to accrual status. For these loans that have been returned to accrual status, cash receipts are applied according to the contractual terms of the loan.

The following table presents NALs by loan class at September 30, 2013 and December 31, 2012:

(dollar amounts in thousands)	Sep	2013 tember 30,	De	2012 cember 31,

- (1) NALs are included in this aging analysis based on the loan s past due status.
- (2) All amounts represent accruing purchased impaired loans related to the FDIC-assisted Fidelity Bank acquisition. Under the applicable accounting guidance (ASC 310-30), the loans were recorded at fair value upon acquisition and remain in accruing status.
- (3) Includes \$81,770 thousand guaranteed by the U.S. government.
- (4) Includes \$90,816 thousand guaranteed by the U.S. government.

Allowance for Credit Losses

Huntington maintains two reserves, both of which reflect Management s judgment regarding the appropriate level necessary to absorb credit losses inherent in our loan and lease portfolio: the ALLL and the AULC. Combined, these reserves comprise the total ACL. The determination of the ACL requires significant estimates, including the timing and amounts of expected future cash flows on impaired loans and leases, consideration of current economic conditions, and historical loss experience pertaining to pools of homogeneous loans and leases, all of which may be susceptible to change.

The appropriateness of the ACL is based on Management s current judgments about the credit quality of the loan portfolio. These judgments consider on-going evaluations of the loan and lease portfolio, including such factors as the differing economic risks associated with each loan category, the financial condition of specific borrowers, the level of delinquent loans, the value of any collateral and, where applicable, the existence of any guarantees or other documented support. Further, Management evaluates the impact of changes in interest rates and overall economic conditions on the ability of borrowers to meet their financial obligations when quantifying our exposure to credit losses and assessing the appropriateness of our ACL at each reporting date. In addition to general economic conditions and the other factors described above,

additional factors also considered include: the impact of declining residential real estate values; the diversification of CRE loans; the development of new or expanded Commercial business segments such as healthcare, ABL, and energy, and the overall condition of the manufacturing industry. Also, the ACL assessment includes the on-going assessment of credit quality metrics, and a comparison of certain ACL benchmarks to current performance. Management s determinations regarding the appropriateness of the ACL are reviewed and approved by the Company s board of directors.

The ALLL consists of two components: (1) the transaction reserve, which includes a loan level allocation per ASC 310-10, specific reserves related to loans considered to be impaired, and loans involved in troubled debt restructurings allocated per ASC 310-40, and (2) the general reserve. The transaction reserve component includes both (1) an estimate of loss based on pools of commercial and consumer loans and leases with similar characteristics and (2) an estimate of loss based on an impairment review of each impaired C&I and CRE loan greater than \$1.0 million. For the C&I and CRE portfolios, the estimate of loss based on pools of loans and leases with similar characteristics is made by applying a PD factor and a LGD factor to each individual loan based on a continuously updated loan grade, using a standardized loan grading system. The PD factor and an LGD factor are determined for each loan grade using statistical models based on historical performance data. The PD factor considers on-going reviews of the financial

78

Table of Contents

performance of the specific borrower, including cash flow, debt-service coverage ratio, earnings power, debt level, and equity position, in conjunction with an assessment of the borrower s industry and future prospects. The LGD factor considers analysis of the type of collateral and the relative LTV ratio. These reserve factors are developed based on credit migration models that track historical movements of loans between loan ratings over time and a combination of long-term average loss experience of our own portfolio and external industry data using a 24-month emergence period.

In the case of more homogeneous portfolios, such as automobile loans, home equity loans, and residential mortgage loans, the determination of the transaction reserve also incorporates PD and LGD factors. The estimate of loss is based on pools of loans and leases with similar characteristics. The PD factor considers current credit scores unless the account is delinquent, in which case a higher PD factor is used. The credit score provides a basis for understanding the borrowers past and current payment performance, and this information is used to estimate expected losses over the 12-month emergence period. The performance of first-lien loans ahead of our junior-lien loans is available to use as part of our updated score process. The LGD factor considers analysis of the type of collateral and the relative LTV ratio. Credit scores, models, analyses, and other factors used to determine both the PD and LGD factors are updated frequently to capture the recent behavioral characteristics of the subject portfolios, as well as any changes in loss mitigation or credit origination strategies, and adjustments to the reserve factors are made as required. Models utilized in the ALLL estimation process are subject to the Company s model validation policies.

The general reserve consists of the economic reserve and risk-profile reserve components. The economic reserve component considers the potential impact of changing market and economic conditions on portfolio performance. The risk-profile component considers items unique to our structure, policies, processes, and portfolio composition, as well as qualitative measurements and assessments of the loan portfolios including, but not limited to, management quality, concentrations, portfolio composition, industry comparisons, and internal review functions.

During the quarter, we made enhancements to our commercial risk rating system used for assessing credit risk when determining our ACL. The enhancements made during the quarter provide greater granularity in overall corporate risk ratings and incorporate a broader set of financial metrics in the determination of the PD and LGD. The PD and LGD factors combine to represent the transaction reserve component for a given credit exposure.

In conjunction with the enhancements to our commercial risk rating system noted above, we enhanced our process for incorporating risk inherent in the economic and risk profile components of our general reserve, which is discussed more fully in Note 1 of Form 10-K. These enhancements allow Huntington to better reflect the credit exposure inherent in our portfolio, as well as overall risks in the economic environment. These changes did not have a material impact on our overall ACL.

The estimate for the AULC is determined using the same procedures and methodologies as used for the ALLL. The loss factors used in the AULC are the same as the loss factors used in the ALLL while also considering a historical utilization of unused commitments. The AULC is reflected in accrued expenses and other liabilities in the Unaudited Condensed Consolidated Balance Sheet.

During a 2013 third quarter review of our consumer portfolios, we identified additional loans associated with borrowers who had filed Chapter 7 bankruptcy and had not reaffirmed their debt, thus meeting the definition of collateral dependent per OCC guidance, and as such, considered a concession, placed on nonaccrual status, and written down to collateral value, less anticipated selling costs. As a result of our review of the existing consumer portfolios, NCOs increased by \$13.1 million and the ALLL increased by \$6.0 million based on our estimated exposure. We will finalize the review during the 2013 fourth quarter.

The ACL is increased through a provision for credit losses that is charged to earnings, based on Management squarterly evaluation of the factors previously mentioned, and is reduced by charge-offs, net of recoveries, and the ACL associated with securitized or sold loans. There were no material changes in assumptions or estimation techniques compared with prior periods that impacted the determination of the current period s ALLL and AULC.
