FORM 6-K
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549
Report of Foreign Private Issuer
Pursuant to Rule 13a-16 or 15d-16
of the Securities Exchange Act of 1934
For the month of May, 2017
Commission File Number: 001-09531
Telefónica, S.A.
(Translation of registrant s name into English)
Distrito Telefónica, Ronda de la Comunicación s/n,
28050 Madrid, Spain
3491-482 87 00
(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F:

Form 20-F Form 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):

Yes No

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7):

Yes No

Edgar Filing: TELEFONICA S A - Form 6-K

Indicate by check mark whether by furnishing the information contained in this Form, the registrant is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934:

Yes No

If Yes is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): N/A

| <u>Alternative performance measures</u> | 40 |

The financial information related to January-March 2017 contained in this document has been prepared under International Financial Reporting Standards (IFRS), as adopted by the European Union, which do not differ for the purposes of the Telefónica Group, from IFRS as issued by the International Accounting Standards Board (IASB).

Telefónica's management model, regional and integrated, means that the legal structure of the companies is not relevant for the release of Group financial information, and therefore, the operating results of each of these business units are presented independently, regardless of their legal structure. For the purpose of presenting information on a business unit basis, revenue and expenses arising from invoicing among companies within Telefónica's perimeter of consolidation for the use of the brand and management contracts have been excluded from the operating results for each business unit. This breakdown of the results does not affect Telefónica's consolidated earnings.

The English language translation of the consolidated financial statements originally issued in Spanish has been prepared solely for the convenience of English speaking readers. Despite all the efforts devoted to this translation, certain omissions or approximations may subsist. Telefónica, its representatives and employees decline all responsibility in this regard. In the event of a discrepancy, the Spanish-language version prevails.

Table of Contents

01

CONSOLIDATED RESULTS

Telefónica Group accesses as of March stood at 346.9m, stable y-o-y, and reflected the improved quality of the customer base; boosting the average revenue per user (+2.1% organic y-o-y) and maintaining low levels of churn.

The weight of higher-value services continued to increase. As such, i) **LTE** customers totalled 75.5m (1.7x y-o-y), with net quarterly additions of 9.2m (+41% y-o-y) and 29% penetration (+12 p.p. y-o-y); ii) **mobile contract** accesses stood at 111.4m (+5% y-o-y) and accounted for 41% of the total (+2 p.p. y-o-y); iii) **smartphones** (+18% y-o-y; 151.5m) achieved 59% penetration (+9 p.p. y-o-y) and net quarterly additions of 4.4m (2.0x y-o-y); and iv) **FTTx and cable** customers (9.6m) grew 21% compared to March 2016, accounting for 45% of total fixed broadband accesses (+8 p.p. y-o-y) and reaching a coverage of 39.9m premises passed (+14% y-o-y).

It is worth highlighting the positive impact of exchange rates on the main financial metrics this quarter (for the first time since the first quarter of 2015), underpinned by the appreciation of the majority of Latin American currencies against the euro, especially the Brazilian real.

As such, **revenues** (13,132m) increased 5.0% vs. January-March 2016, with a positive contribution from exchange rates of 3.7 p.p. In organic terms, revenues were up 1.5%, driven by service revenues (+1.7%), which more than compensated the decline in handset sales (-1.6%). Excluding the negative impact of regulation, revenues would have grown 2.5% y-o-y organic.

Mobile data revenues maintained double-digit y-o-y growth (+13.5% organic), increasing their weight by 5.4 p.p. to 58% of mobile service revenues.

Mobile data traffic maintained a strong pace of growth in the quarter (+68% y-o-y), underpinned by LTE traffic, which accounted for 46% of the total (+18 p.p. y-o-y) with higher average usage (+58%) and ARPU around 11% higher. As such, unitary traffic per client rose to 1.3GB a month (+49% y-o-y).

In January-March 2017, provisions for restructuring costs (mainly 76m in T. España and 11m in T. Deutschland), affected operating expenses (85m) and other net income (expenses) (4m). In the first quarter of 2016, provisions for restructuring costs were mainly registered in T. Deutschland for 23m.

Operating expenses (9,348m; +4.5% y-o-y) rose 1.0% y-o-y in organic terms, due to higher network and system costs, and inflationary pressure in some Latin American countries; however, personnel expenses decreased (savings associated to redundancy programmes), as did supplies (interconnection savings). The average headcount in the first quarter stood at 126,941 employees (-7.3% y-o-y).

Operating income before depreciation and amortisation (OIBDA) (4,021m) grew 4.8% y-o-y, with exchange rate fluctuations contributing 5.0 p.p. In organic terms, OIBDA was up 1.3% y-o-y, reflecting a positive revenue evolution, cost containment efforts and synergy capture and efficiencies from the transformation process. Excluding the impact of regulation, OIBDA would have increased by 2.3% organic y-o-y.

Underlying OIBDA (4,109m), which excluded restructuring costs, was up 6.5% compared to January-March 2016.

OIBDA margin stood at 30.6% and remained stable y-o-y (-0.1 p.p. reported; 0.0 p.p. organic).

Depreciation and amortization (2,451m) increased 5.6% y-o-y and included a positive contribution from exchange rates of 6.9 p.p. (-1.3% organic).

As such, **operating income (OI)** (1,570m) rose 3.6% y-o-y (+5.2% y-o-y organic).

Table of Contents

Net financial expenses in the quarter (449m) were lower than in the same period of the previous year (659m) mainly due to the reduction in the cost of debt, thanks to the refinancing of debt in European currencies.

Corporate Income Tax totalled 314m in the quarter (298m in January-March 2016).

Profit attributable to minority interests (30m) increased 7m vs. January-March 2016, mainly due to the greater profit attributable to the minority interests of T. Deutschland and T. Brasil.

As such, the **profit attributable to equity holders of the Parent** (779m) rose 42.2% y-o-y in the quarter.

Basic earnings per share stood at 0.14 (+48.8%), while reached 0.18 in underlying terms.

CapEx (1,621m; -4.4% y-o-y; -8.4% organic) up to March continued to focus on UBB rollout and reflected integration synergies, consolidation and network optimisation (big data). CapEx included 4m of spectrum acquisition, mainly in Mexico.

Operating cash flow (OIBDA-CapEx) stood at 2,400m and grew 12.0% y-o-y in reported terms (+8.9% organic), levered on solid operating performance and lower CapEx intensity.

In January-March 2017, **free cash flow** reached 599m and increased 530m y-o-y, despite working capital seasonality. Thus:

i) **Operating cash flow (OIBDA-CapEx)** excluding spectrum rose to 2,404m (2,492m underlying; +15.0% y-o-y).

ii) **Interest payments** in the quarter (641m) decreased 27.7% y-o-y, mainly due to the lower cost of debt in European currencies. The effective cost of interest payments in the last 12 months stood at 3.48% at March 2017, 128 b.p. lower than the 4.76% at March 2016.

iii) **Tax payments** totalled 149m vs. 12m of tax collection in January-March 2016, due to lower refunds from previous years. The effective payment rate stood at 11.3%, affected by seasonal factors.

iv) **Working capital** consumed 1,072m, mainly reflecting CapEx seasonality, prepayment of taxes, site rentals and content, partially offset by the execution of factoring measures on accounts receivable and the extension of payment terms with suppliers or with the factoring company where these had been discounted. This consumption is 120m lower than in the first quarter of 2016, mainly due to lower content payments.

v) **Operations with minority shareholders** (21m) are mainly associated with dividend payments in T. Brasil.

Net financial debt at the end of the quarter (48,766m) increased 171m compared to December 2016, despite free cash flow generation of 599m, mainly as a result of: i) shareholder remuneration (186m, mainly coupons from capital instruments); ii) payment of labour-related commitments (166m); iii) higher value in euros of net debt in foreign currencies (141m); and iv) other factors, including the refinancing of commercial liabilities (277m).

During the first quarter of 2017, Telefónica's **financing activity** amounted to approximately 6,106m equivalent (without considering the refinancing of short-term bank loans and commercial paper), and focused on strengthening

the liquidity position, refinancing debt maturities (in an environment of very low rates) and extending maturities. Therefore, at the end of March, the Group maintained a comfortable liquidity position, with gross debt maturities covered beyond the next 24 months. The average debt life stood at 7.92 years.

Main financing operations in the quarter included:

In January, there were two Telefónica Emisiones, S.A.U. bond issues totalling 1,750m, of which 1,250m maturing in January 2025 and 500m in October 2028 (annual coupon of 1.528% and 2.318%, respectively). In addition, Telefónica Emisiones, S.A.U. closed a private issuance for 150m, maturing in 2019, and there was an issue by Telefónica Chile for 48,000m CLP, maturing in six years.

In February, Telefónica Brasil issued a 2,000m BRL bond, with final maturity in February 2022.

In March, Telefónica Emisiones, S.A.U. issued a USD bond in two tranches, 1,500m USD at 10 years and 2,000m USD at 30 years, the largest transaction since 2010, with coupons of 4.103% and 5.213%, respectively, the latter being the lowest coupon ever paid by Telefónica in a USD issue at this term. Also in March, there was a 200m reopening of the 500m bond maturing in October 2028, which was issued in January.

Table of Contents

After 31 March, Telefónica closed the first transaction on the South Asian market oriented to Taiwanese investors amounting to 200m USD at a 20-year term and a 4.90% coupon. Furthermore, the 30-year bond issued in March 2017 was reopened for 500m USD. The average debt life including these operations stood at 8.29 years.

Throughout the quarter, Telefónica Group obtained funding by means of extending payment terms with suppliers, or with the factoring firm where those had been discounted, for a total of 367m equivalent (643m equivalent in the same quarter of 2016).

Meanwhile, Telefónica, S.A. and its holding companies continued their issuance activity under the Promissory Notes and Commercial Paper Programmes (Domestic and European), maintaining an amount outstanding of approximately 3,005m at the end of March.

At the end of March, Telefónica maintained undrawn, committed credit lines with different credit institutions for an approximate amount of 12,880m (11,570m maturing in more than twelve months) which, combined with the cash equivalents position and current financial assets excluding Venezuela, placed liquidity at 23,927m.

Definitions:

Organic Growth: Assumes constant exchange rates from 2016, excludes the impact of hyperinflationary adjustments in Venezuela in both years and considers a constant perimeter of consolidation. In OIBDA and OI terms, excludes write-downs, capital gains/losses from the sale of companies, sale of towers, restructuring costs and material non-recurring impacts. CapEx also excludes investment in spectrum.

Underlying Growth: Reported figures excluding the impact of write-downs, capital gains/losses from the sale of companies, tower sales, restructuring costs and material non-recurring impacts, as well as depreciation and amortisation charges from purchase price allocation processes.

Digital Services

(y-o-y changes in organic terms)

Digital service revenues totalled 1,247m and grew 4.9% compared to the first quarter of 2016.

Video revenues (755m) maintained a steady growth rate of 4.6% y-o-y, underpinned by the larger TV base in Hispanoamérica (+3%) and by the improved ARPU in Spain, Brazil and Hispanoamérica. Pay TV accesses stood at 8.2m(-2% y-o-y; including 4.2m for satellite TV (-8% y-o-y)).

Security revenues amounted to 80m in the quarter and grew 1.7% y-o-y. In order to strengthen capacities, existing alliances have been extended both in business (Palo Alto, Fortinet, McAfee or Subex) and consumer (Allot). It is worth highlighting the strong growth in the Corporates segment, which grew 19.0% y-o-y.

M2M revenues reached 69m achieving 37.3% y-o-y growth, due to the acceleration of connectivity and IoT solutions, and the rollout of flagship projects in our core geographies. In addition, Telefónica is also working on the global strategy for Low Power Wide Area communications (NB, Sigfox), which are based on using licensed and non-licensed technologies according to each specific case and to the customer's needs.

Cloud revenues totalled 99m, 8.3% less than in January-March 2016 due to significant projects registered in this period. The focus was on strengthening the value proposal for the SME segment.

Table of Contents

Telefónica Global Resources

The **Global Network and Operations** area continued to accelerate the rollout of UBB. Premises passed with FTTx and cable rose to 39.9m (+14% vs. March 2016) of which 17.4m are in Brazil (FTTx and cable), 17.5m in Spain (FTTH) and 5m in Hispanoamérica (FTTx and cable). On the other hand, 4G population coverage, with a total of 58,963 locations, rose to 64% (+11 p.p. y-o-y).

In the move towards an All-IP network, VoIP accesses totalled 6.4m. Thus, VoLTE and VoWiFi have been launched for certain devices in the UK, while VoWiFi calls have been successfully trialled in Chile.

As for virtualisation, the construction of a large-scale vEPC network (*virtual Evolved Packet Core*) began in 13 countries, which forms a framework for providing converged voice and data on LTE networks.

Meanwhile, two new global centres were launched, the Platforms Centre and the Legacy Network Transformation Centre, with the aim of boosting the efficiencies that have already been achieved. Furthermore, in Spain, the rollout of a new task allocation system commenced, in order to streamline fibre installations and to reduce the time-to-resolution of incidents by up to 40%.

In terms of innovation, key events included the success of the first NFV (Network Functions Virtualization) interoperability event, held at 5TONIC LAB, and the first 5G remote-driving experiment.

Key events this quarter for **Global IT**, focused on the E2E digitalisation of the Company, include the Full Stack programmes initiated in the fixed business in Argentina, the migration of 2.5m prepaid customers in Peru and the launch of a pilot for mobile contract customers in Mexico. In addition, progress has been made in the construction of Big Data platforms (x3 capacity y-o-y), the per-country consolidation of different online tariff calculators and the rollout of global applications. The progress made on these projects has led to a 50% level of capacity enablement.

Finally, the first quarter saw the reduction of 0.9% of servers, 2 Data Centres and 123 applications, while critical incidents were down 21%.

Telxius

(y-o-y changes in organic terms)

Telxius presented solid results in the first quarter of 2017, with **revenues** of 188m (+5.4% y-o-y), **OIBDA** of 92m and an OIBDA margin of 48.9%. As the Company was only created in 2016, the y-o-y comparison of OIBDA does not reflect actual business performance, as it is affected by the progressive establishment of activities over the course of the year and by the negative impacts associated with the formation of the Company.

In the **Tower business**, Telxius grew its portfolio with 27 new towers in the quarter, reaching a total of 15,897 at the end of March, with a tenancy ratio of 1.28x. Revenues stood at 76m.

In the **Submarine Cable business**, there was notably higher demand for international data traffic managed by Telxius (+35% y-o-y in IP traffic and +54% bandwidth in Capacity services). As such, revenues totalled 112m. In addition, rollout continued of the two new cables, BRUSA and MAREA, which will become operational in 2018:

BRUSA: 100% Telxius , with 8 fibre pairs and capacity of 100 Tbps, connecting with its approximately 10,700 km in length Brazil, Puerto Rico and the US.

MAREA will be approximately 6,600 km in length, connecting Virginia Beach (US) with Bilbao (Spain), and Telxius will have 4 of the system s 8 fibre pairs.

The **CapEx** totalled 13m. However, this item is subject to a high degree of seasonality during a year of notable investment for Telxius, in the context of the above-mentioned rollout of new cables.

Notes:

- Since the second quarter of 2016 Telefónica's operations in the United Kingdom are no longer reported as discontinued operations and all its assets and liabilities have ceased to be reported as held for sale, and have been reclassified back into full consolidation, in compliance with International Financial Reporting Standards

(IFRS). For comparative purposes, the results of Telefónica Group of the first quarter of 2016 are reported following the same criteria.

- *The weighted average number of ordinary shares outstanding during the period has been obtained applying the IAS rule 33 Earnings per share . Thereby, the weighted average of shares held as treasury stock have not been taken into account as outstanding shares. On the other hand, the denominator is retrospectively adjusted for transactions that have changed the number of shares outstanding without a corresponding change in equity (as if such transactions had occurred at the beginning of the earliest period presented). For instance, the bonus share issue carried out to meet the scrip dividends paid in 2016, have been taken into account. Also, the ordinary shares that would be issued upon the conversion of the mandatorily convertible notes issued on 24 September 2014 are included in the calculation of earnings per share from that date.*
- *Basic earnings per share ratio is calculated dividing Profit for the period attributable to equity holders of the parent, adjusted for the net coupon corresponding to Other equity instruments , by the weighted average number of ordinary shares outstanding during the period.*
- *2016 and 2017 reported figures include hyperinflationary adjustments in Venezuela in both years.*

TELEFÓNICA

GUIDANCE 2017

| 2016 Base | | Operative 2017 Guidance | 2017 Jan - Mar |
|-----------|------------------------|--|-------------------|
| 51,734 | Revenues (% Chg YoY) | Stable (in spite of regulation: ~-1.2 p.p.) | 1.5% |
| 31.8% | OIBDA margin (Chg YoY) | Expansion up to 1 p.p. | (0.0 p.p.) |
| 16.5% | CapEx / Sales | Around 16% | 12.2% |

- **Organic criteria:** Assumes constant exchange rates as of 2016 (average FX in 2016), excludes the impact from hyperinflation in Venezuela in both years and considers constant perimeter of consolidation. In OIBDA and OI terms, excludes write-downs, capital gains/losses from the sale of companies, tower sales, material non-recurring impacts and restructuring costs. CapEx also excludes investment in spectrum.

2016 adjusted base excludes:

- The results of the companies sold in 2016 (Telefé, T. Personalizadas and Vocem) from 1 January, 2016 to the date of exiting the perimeter of consolidation.
- OIBDA excludes additionally write-downs, capital gains/losses from the sale of companies, tower sales, material non-recurrent impacts and restructuring costs.
- CapEx excludes additionally spectrum acquisition.

Notes:

- *Since the second quarter of 2016 Telefónica's operations in the United Kingdom are no longer reported as discontinued operations and all its assets and liabilities have ceased to be reported as held for sale, and have been reclassified back into full consolidation, in compliance with International Financial Reporting Standards (IFRS). For comparative purposes, the results of Telefónica Group of the first quarter of 2016 are reported following the same criteria.*
- *The differences with the caption Net Free Cash Flow after CapEx included in the table presented above, are related to Free Cash Flow being calculated before payments related to commitments (payment of labour commitments) and after operations with minority shareholders, due to cash recirculation within the Group.*
- *2016 and 2017 reported figures include hyperinflationary adjustments in Venezuela in both years.*
- (1) *Includes cash received from dividends paid by subsidiaries that are not fully consolidated.*
- (2) *Figures in million euros. First quarter 2017 includes the following spectrum payments: 1 in UK, 1 in Colombia and 2 in Mexico. In January-March 2016: 1 in Colombia, 1 in Germany and 0.5 in UK.*
- (3) *Dividends paid by Telefónica S.A., operations with treasury stock, issuance of shares, issuance and coupons of undated deeply subordinated securities, issuance of mandatorily convertible bonds into Telefónica S.A. shares and operations with minority shareholders from subsidiaries that are consolidated through the equity method.*

(4) Other deferred expenses include 76 million euros in Q1 2017 related to commitments associated with long-term restructuring plans in Spain.

TELEFÓNICA ESPAÑA

(y-o-y changes in organic terms)

Telefónica España's results continued to reflect the strategy focused on increasing customer value, which resulted in the growing penetration of high-value services. However, the y-o-y changes in the first quarter were affected by the different phasing of tariffs and promotion upgrades, and by lower wholesale revenues.

Movistar Fusión accesses grew 4% y-o-y, representing 84% of the broadband base in the consumer segment, 82% of the TV base and 77% of the mobile contract base. The quality of the customer base was reflected in the growing penetration of UBB fibre (38%, +8 p.p. y-o-y) and pay TV (68%, +2 p.p.). In the quarter, 59% of gross additions were new customers, ARPU stood at 81.6 (+4.4% y-o-y; tariff update and improvement in the value mix) and churn stood at 1.4%, practically stable y-o-y.

Mobile accesses grew y-o-y (+1%) for the first time since the second quarter of 2011, with positive net additions for the third consecutive quarter (24k accesses) driven by the contract segment (217k) and the totalization strategy.

Fixed telephony accesses decreased 3% y-o-y, despite maintaining a similar improvement rate to that seen in the same quarter of 2016 and 2015 (-4% and -5%, respectively).

Fixed broadband accesses rose 1% y-o-y, driven by **fibre accesses** (+27%) that represented 52% of the broadband base (+11 p.p. y-o-y). Of these fibre customers, 68% were UBB customers, while premises passed with FTTH totalled 17.5m. **Pay TV accesses** decreased 3% compared to March 2016 due to the loss of satellite customers; however, the quarterly loss (-41k) was sequentially reduced due to higher IPTV net additions.

Wholesale accesses totalled 4.4m (-9% y-o-y) and their decline slowed down due to greater growth in NEBA fibre, which reached a base of 426k (more than double y-o-y).

Revenues in January-March came to 3,066m and decreased 2.6% both due to lower **service revenues** (-1.5%) and lower handset sales (-29.9%).

Consumer revenues (1,620m) remained stable y-o-y (-0.4%); with a decline in non-convergent revenues (-15.0%) and lower growth in **Fusión revenues** (+9.3%), due to the different tariff updates schedule for the majority of the customer base (February 2016 vs. April 2017) and the positive impact the termination of the TV promotion **Premium Extra** had on the first quarter of 2016.

Business revenues (840m) remained stable (+0.1% y-o-y) and the gradual change in their composition continued: growth in IT (+11.0%) offsetting the reduction in communication services (-2.4%).

Other revenues (525m) decreased 7.3% compared to January-March 2016, due mainly to lower wholesale revenues from TV and MNVOs and, to a lesser extent, to the start of the regulatory changes applicable throughout 2017 (NEBA, ORLA, etc.).

Operating expenses in the first quarter totalled 2,003m (-3.3% y-o-y) and were affected by an additional restructuring provision of 76m associated with the 2017 employment suspension plan due to a greater-than-expected uptake. This will produce an average annual saving in direct costs of approximately 9m from 2018 onwards.

Supplies (816m) increased 3.6%, in line with the previous quarter, due to the greater TV content and IT costs. Net spending on content rose 21% in the quarter (+46% the previous quarter) as the y-o-y comparison became more homogeneous (the cost of the Champions League was included from the first quarter of 2016).

Table of Contents

Personnel expenses (601m) accelerated their rate of reduction (-12.6%) due to the savings from the employment suspension plan initiated in 2016 (77m in the quarter compared to the same period of the previous year) and the headcount at the end of March stood at 28.468 employees (-8.5% y-o-y).

Other operating expenses (587m) decreased in the quarter (-3.2% y-o-y) mainly due lower commercial spend.

As such, excluding the above-mentioned provision, **OIBDA** in the quarter totalled 1,219m, decreasing 2.4% y-o-y largely as a result of lower revenues; and **OIBDA margin** grew 0.1 p.p. y-o-y to 39.8%. **CapEx** in January-March stood at 333m, (-22.7% y-o-y) and **operating cash flow** grew solidly by 8.3% to 886m.

TELEFÓNICA DEUTSCHLAND

(y-o-y changes in organic terms)

Telefónica Deutschland maintained solid operational momentum in the first quarter of 2017, leveraging a continued strong performance of partners while the competitive environment showed further signs of improvement across segments. In Premium, QFree stimulated data usage, while in non-Premium competitive pressure eased following price increases of some competitors. The Company also benefited from continued successful execution on the integration milestones. Results were in line with the full-year outlook, reflecting significant regulatory impacts (the reduction in mobile termination rates since December 2016 and the glidepath of the European roaming legislation) that weighed both on revenue and OIBDA performance.

At the end of March, **contract mobile customers** (20.7m) grew 7% y-o-y, with quarterly net additions of 172K driven by strong partner trading (55% of gross additions; 2 p.p. less vs. the fourth quarter of 2016). **Prepay customers** (24.0m) were slightly up y-o-y (+1%), posting 183K net quarterly additions. **Smartphone** penetration was 57%; up 2 p.p. y-o-y. **LTE accesses** (14.0m) y-o-y growth accelerated to 61% (+53% in the fourth quarter of 2016) and LTE penetration increased 11 p.p. y-o-y to 32%, reflecting successful data monetization efforts (average data usage for O₂ contract LTE customers +52% y-o-y to 1.8GB in the first quarter of 2017). **Retail broadband accesses** (2.1m) were broadly stable y-o-y and continued to benefit from the sustained strong demand for VDSL; 67K quarterly net additions to a customer base of 872K (up 47% y-o-y). **Wholesale DSL** customers continued to fall (129K net disconnections, to 562K wholesale accesses) due to the planned dismantling of the legacy infrastructure.

In the first quarter, **revenues** reached 1,771m (-4.7% y-o-y, improving vs. -6.0% in the fourth quarter of 2016). **Mobile service revenues (MSR)** totalled 1,292m (-3.3% y-o-y), reflecting strong regulatory headwinds as well as the higher share of wholesale revenue and the ongoing legacy base rotation. Excluding regulatory effects, MSR sequentially improved slightly their trend to -0.6% vs. -0.9% in the prior quarter. **Handset revenues** (252m) continued to fall (-5.4% y-o-y; vs. -17.6% in the fourth quarter of 2016) due to continued lower demand in the market on the back of longer replacement cycles. **Fixed revenues** fell 11.9% y-o-y to 223m, mainly driven by lower wholesale and other fixed revenues due to the planned decommissioning of the legacy ULL platform. Retail DSL revenue trend (-9.8% y-o-y in the quarter) was similar to the prior quarter as a result of phasing of promotional effects.

Operating expenses totalled 1,383m up to March 2017 (lower 6.5% y-o-y). **Supplies** benefited from lower interconnection and hardware costs and reached 585m (-7.9% y-o-y). **Personnel expenses** were 155m (-4.7% vs. the first quarter of 2016) as a result of the successful execution of the employee restructuring programme. **Other operating expenses** totalled 643m (-5.6% y-o-y) on the back of successful synergy capture mainly resulting from roll-over effects. Total restructuring costs amounted to 11m in the quarter (23m in the first quarter of 2016).

OIBDA totalled 400m in the quarter and grew 1.4% y-o-y, despite the negative effect from the above mentioned regulatory changes, and reflected incremental synergies totaling 35m more (vs. 55m in the first quarter of 2016), as well as investments in QFree positioning. The **OIBDA margin** was 22.6%, up 1.4 p.p. y-o-y.

CapEx benefitted from savings related with network consolidation and the rollout of a single LTE network and fell 4.2% y-o-y to 208m in the quarter.

Operating cash flow (OIBDA-CapEx) totalled 192m; up 7.7% y-o-y.

04

TELEFÓNICA UK

(y-o-y changes in organic terms)

In the first quarter of 2017 Telefónica UK continued to reinforce its position as a leading mobile operator in the UK with increasing users on its network and y-o-y growth in both revenues and OIBDA, underpinned by increasing ARPU and leading levels of loyalty.

Total mobile accesses were broadly stable y-o-y at 25.0m and the **contract customer base** grew by 2% y-o-y, despite the increasingly competitive market and driven by its customer led, mobile first strategy and after adjusting for 228k inactive accesses in the quarter. Contract customers represented 63% of the total accesses, +1.p.p. y-o-y, while contract churn was 0.9% (flat y-o-y, excluding the aforementioned base adjustment). In **prepay**, net losses were 326k in the quarter, however, customers with frequent top-ups increased by 0.7% y-o-y. LTE deployment reached 96% outdoor population coverage as of March (+10 p.p. y-o-y), driving the LTE base to 12.4m (+31% y-o-y), with a penetration of 57% (+14 p.p. y-o-y).

Revenues in the first quarter totalled 1,601m and grew 2.1% y-o-y (+2.4% in the fourth quarter 2016).

Mobile service revenues were 1,255m and grew 1.2% y-o-y in the quarter, driven by higher average subscription and out-of-bundle revenue, customer base growth, as well as further growth in T. UK's MVNO partner accesses on its network. Growth was partially offset by the increased impact from roaming and MTRs (-2.0 p.p. on MSR growth; -1.9 p.p. in October-December 2016).

Handset & other revenues increased 5.3% y-o-y up to March to 346m driven by growth in handset sales on flagship device launches in the prior quarter and other revenues, primarily from the smart metering programme (SMIP) rollout revenues.

Operating expenses were 1,215m up to March, up 3.1% y-o-y. **Supplies** (747m) grew 3.4% in the quarter due to commercial activity underpinned by demand for higher end devices. **Personnel expenses** totalled 111m (-5.7%) due to ongoing efficiencies implemented, such as the restructuring plan carried out in the fourth quarter. **Other expenses** increased 5.4% reaching 357m on continuing network and capacity growth.

OIBDA grew 0.6% y-o-y to 416m in the quarter, driven by continuing revenue growth, and **OIBDA margin** stood at 26.0%, slightly decreasing y-o-y (-0.4 p.p.).

CapEx amounted to 225m in January-March, an increase of 30.8% y-o-y, principally dedicated to furthering the LTE rollout in order to reach 98% indoor coverage by the end of 2017. Thus, **operating cash flow (OIBDA-CapEx)** totalled 191m in the quarter (-21.0% y-o-y).

TELEFÓNICA BRASIL

(y-o-y changes in organic terms)

In the first quarter of 2017, Telefónica Brasil recorded an acceleration in revenues mainly driven by the positive performance of mobile service revenues that, together with the reduction in operating expenses (synergies and efficiency measures), enabled it to maintain the solid y-o-y expansion of margins and the strong growth of operating cash flow. All this was in spite of the regulatory impacts (-45.6% in mobile termination rates, -17.7% in fixed-mobile retail, -35.3% in fixed local and -50.9% in fixed interurban, all since 25 February 2017, which deducted 2.1 p.p. from the y-o-y growth in revenues).

Mobile accesses increased by 1% y-o-y, with focus on higher-value customers and quality: contract accesses +8%, smartphones +26% (76% penetration, +15 p.p. y-o-y) and LTE accesses +103% (37% penetration). In the **contract segment**, quarterly net additions increased to 435k accesses (2.4x higher y-o-y) and churn stood at the lowest level of the last 2 years (1.6%, -0.1 p.p. y-o-y), sustaining the Company's market leadership (+42.0% contract market share in March 2017). A leading position was also maintained in **LTE accesses** (25.4m), with a market share of 34.5%, after extending coverage to 820 cities (65% population coverage).

In **retail broadband accesses** (7.4m; +2% y-o-y), it is worth noting the strong increase in both FTTx and cable accesses (4.2m; +7% y-o-y) and in premises passed, which increased to 17.4m at March. In the **pay TV accesses** (1.7m, -7% y-o-y), the weight of IPTV increased to 17% (+10 p.p. y-o-y).

Revenues in the first quarter totalled 3,165m and increased by 1.6% y-o-y (+1.1% in the fourth quarter), underpinned by ARPU growth across the main services which offset the regulatory impact and the lower handset sales.

Mobile service revenues accelerated their y-o-y growth to 5.1% (+4.0% in the fourth quarter of 2016) with 4.3% growth in ARPU, underpinned by the strong increase in data (+37.0%), which more than compensated the regulatory impact (-2.2 p.p. y-o-y). **Fixed revenues** decreased by 2.2% y-o-y due to regulation and voice decline, although they were partially offset by broadband revenues (+8.0%).

Operating expenses (2,102m in January-March) decreased y-o-y for the fifth consecutive quarter (-1.1%), thanks to the ongoing generation of synergies, a more rational commercial policy and the positive impact of regulation, which offset the impact of inflation. **Supplies** (613m) fell 9.1% y-o-y due to the reduction in termination rates, lower handset consumption and lower content costs. **Personnel expenses** (319m) increased by 0.2% y-o-y, as a result of the annual collective agreement (average wage increase of 8.0%) that was practically offset by the workforce reduction. **Other operating expenses** (1,170m) increased by 3.3% y-o-y, as a result of the higher number of value accesses and greater commercial activity (call centre actions and commissions).

As such, **OIBDA** totalled 1,104m and increased by 7.5% y-o-y, while the **OIBDA margin** increased to 34.9% (+1.9 p.p. y-o-y). Over the three first months of the year, the company generated synergies of 107m, 46m of which had a positive impact on revenues from cross-selling and 61m in expenses from renegotiations with suppliers and lower commercial and personnel expenses.

CapEx in this quarter (397m) was mainly dedicated to expansion of the 4G network, the IP backbone and expansion of the fibre network, reflecting optimisation thanks to the use of big data and synergies. As such, **operating cash flow** (OIBDA-CapEx) totalled 707m in the quarter and maintained solid growth (+21.6%).

TELEFÓNICA HISPANOAMÉRICA

(y-o-y changes in organic terms)

Telefónica Hispanoamérica recorded a solid set of financial results in the first quarter of the year, which was reflected in the positive y-o-y performance in revenues and OIBDA, thanks to the strategic focus on capturing value that translated into a strong increase in the average revenue per user (+9.3% y-o-y).

Mobile **accesses** stood at 112.7m at March and remained virtually stable y-o-y, despite posting net losses in the quarter (-2.6m) impacted by the q-o-q growth in prepay churn in Argentina, Colombia and Mexico. However, in the contract segment, positive net additions were sustained in all countries with the exception of Peru, which was impacted by high competitive intensity. In addition, **smartphones** accelerated their growth to 22% (46% penetration, +8 p.p. y-o-y) and LTE accesses to 73% (16% penetration, +7 p.p. y-o-y).

In the **fixed business**, within **retail broadband accesses** (5.5m; -1% y-o-y) the focus remained on the migration of accesses to FTTx and cable, which increased to 1.3m connected accesses (+53% y-o-y; coverage of premises passed of 5.0m). Pay TV **accesses** (2.9m) rose 3%, maintaining solid growth in all countries.

Revenues in the first quarter increased to 3,285m and grew by 9.2%. **Mobile service revenues** once again accelerated their growth to 10.6% y-o-y underpinned mainly by Argentina and Colombia. **Fixed business revenues** (+4.1% y-o-y) continued to be driven by the strong growth in pay TV and broadband revenues, which more than compensated the decline in voice and access revenues.

Operating expenses (2,424m) increased 9.9% y-o-y, mainly due to higher personnel expenses in inflationary countries. **Supplies** (+1.4% y-o-y) showed the highest termination expenses, mainly in Argentina offset by the lower expenses in Mexico. **Personnel expenses** increased 20.7% and **other operating expenses** 13.7%, in both cases due to the impact of inflation.

Thus, **OIBDA** in the first three months reached 904m and increased 6.2% y-o-y, while the **OIBDA margin** stood at 27.5% (-0.8 p.p. y-o-y).

The **CapEx** totalled 430m and decreased 9.0% y-o-y, and was mainly assigned to the rollout of 4G and fibre networks and to improve and increase the capacity of 2G and 3G mobile networks.

Thus, the **operating cash flow (OIBDA-CapEx)** rose to 474m, with y-o-y growth of 23.6%.

Telefónica Argentina

(y-o-y changes in organic terms)

Telefónica Argentina's first quarter results continued to show strong growth in revenues and OIBDA, with solid margins expansion, driven by a gradual updating of tariffs, cost efficiencies and a more favourable macroeconomic environment with lower levels of inflation.

Mobile accesses totalled 20.2m at March (+1% y-o-y) and there was noteworthy growth in contract (+4%), LTE (+87%) and smartphones (+19%). Thus, net contract additions in the quarter reached 34k accesses, while total accesses posted a net losses of 610k due to the prepay segment, with an increase in churn (4.6%) and lower commercial activity. However, the quarter showed an increase in the volume of top-ups, which together with the tariff updates explained the 42.2% y-o-y growth in total ARPU.

In **retail broadband accesses** the migration towards higher speeds continued thanks to the rollout of the fibre network with a high connection rate, after reporting net quarterly additions of 41k accesses (76k accesses connected at March) over a total of 597k premises passed with FTTx.

Revenues in the first quarter increased to 876m and accelerated their y-o-y growth to 33.4% (+31.6% in the fourth quarter) due to the strong performance of the mobile business and despite the lesser growth in fixed revenues. Handset revenues maintained their growth rate (+32.0% in the quarter).

As such, **mobile service revenues** (510m in the first three months) accelerated their y-o-y growth (+43.1%; +30.1% in the fourth quarter), driven by strong ARPU growth, with a positive performance from promotions and a more favourable y-o-y comparison. Data revenues continued to be the main growth driver, after increasing 57.0% y-o-y as a result of greater data traffic (+80.2% y-o-y).

Fixed business revenues increased to 302m in January-March and grew 20.0% y-o-y (+33.3% in the fourth quarter), due to the growth of broadband ARPU (+24.0%) resulting from fibre migration and tariff updates.

Operating expenses in the first quarter totalled 653m and increased 26.2% y-o-y (+15.0% in the previous quarter), due mainly to the effect of inflation on higher personnel expenses and the increase in interconnection expenses, after the retroactive increase in termination charges since September 2016.

OIBDA (231m in January-March 2017) increased 62.8% y-o-y and the **OIBDA margin** stood at 26.4%, expanding 4.8 p.p. y-o-y.

CapEx totalled 151m in the quarter (-0.7% y-o-y), with focus on developing the 4G network and improving the fixed network.

Thus, **operating cash flow (OIBDA-CapEx)** amounted to 80m (- 10m in the first quarter of 2016).

Notes:

-

Edgar Filing: TELEFONICA S A - Form 6-K

ARPU: monthly average revenue divided by the monthly average accesses of the period. % Change in local currency.

- *Data traffic is defined as Terabytes used by the company customers, both upload and download (1TByte = 10¹² bytes). Promotional traffic is included. Traffic not associated to the Company's mobile customers (roaming-in, MVNOs, interconnection of third parties and other business lines) is also included. Traffic volume non rounded.*

(1) Excludes M2M.

(2) Includes solely traffic related with FBB accesses, not Business customers.

Table of Contents**Telefónica Chile**

(y-o-y changes in organic terms)

Telefónica Chile remained focused on high-value segments, with positive net additions in mobile contract and FTTx, in a market context which continued to be affected by the high competitive intensity. On the other hand, this quarter's results were affected by the reduction in mobile termination charges (-23% since 25 January) and fixed network termination charges (-9% since 7 May 2016).

Mobile accesses stood at 9.0m and decreased 5% y-o-y due to the performance of the prepay segment (-10%), impacted by the high level of competitive intensity. Meanwhile, contract accesses (35% of the total) continued to show solid y-o-y growth (+5%), with net additions of 5k accesses in the quarter. In turn, LTE accesses were up 56% (to 1.8m) with population coverage reaching 79%.

Retail broadband accesses totalled 1.1m (-1% vs. March 2016), presenting a net loss of 2k accesses in the quarter, although there was notable growth in FTTx accesses which totalled 329k (+22% y-o-y) after achieving net additions of 5k accesses in the quarter; coverage continued to increase gradually (1.2m premises passed). **Pay TV accesses** increased 2% y-o-y to 657k, underpinned by the differential content offering. However, there were net losses of 4k in the quarter, linked mainly to the change in installation providers which led to a slowdown in TV and broadband commercial activity.

Revenues totalled 561m in the first quarter with a y-o-y drop of 0.8%, with growth decelerating compared to the previous quarter (+3.8%). This was mainly due to the reduction in the prepay base, the seasonality of B2B projects and the effects of the aforementioned regulation, which had a negative impact on the y-o-y comparison amounting to 0.9 p.p.

Mobile service revenues totalled 287m and decreased 3.2% y-o-y (vs. +0.5% in the fourth quarter of 2016), due to the decline in the prepay base and the regulatory impact. **Handset revenues** maintained a strong rate of growth (+26.2%). **Fixed business revenues** stood at 232m in the quarter (-1.5% y-o-y), despite the increase in **broadband and new services revenues** (+5.7% y-o-y), and presented a slight slowdown compared to the previous quarter (+13.3% y-o-y) linked to the seasonality of IT projects.

Operating expenses totalled 394m in January-March and rose 3.1% y-o-y despite the progressive implementation of efficiency measures. This was mainly explained by the rise in operating expenses linked to network rollouts (4G), the increase in energy expenses associated with tariff decrees (since the second half of 2016), as well as the greater costs related to the implementation of system simplification projects (Full Stack).

OIBDA came to 174m in the quarter, down 10.0% y-o-y (-8.1% in the fourth quarter) due to the greater commercial effort, the seasonality of the aforementioned projects and the aforementioned rise in expenses. Thus, the **OIBDA margin** stood at 31.1% in January-March (-3.2 p.p. y-o-y).

The **CapEx** for January-March totalled 87m (-32.3% y-o-y), mainly allocated to expanding 4G and improving the fixed network (FTTx coverage).

The **operating cash flow (OIBDA-CapEx)** stood at 87m (+33.8% y-o-y).

Table of Contents**Telefónica Perú**

(y-o-y changes in organic terms)

Telefónica Perú remained focused on the improvement of service quality, extending 4G coverage in the mobile business, and the deployment of high-speed networks in the fixed business. In the first quarter, operational growth has been affected by the natural disaster caused by the El Niño phenomenon, which added to the high competitive intensity of the market.

Total accesses stood at 20.3m in the first quarter (-7% y-o-y). **Mobile accesses** totalled 14.8m in March (-10% y-o-y). In the contract segment net losses came to 310k accesses in the quarter, due to lower commercial activity and despite the sequential improvement in the levels of churn (-0.3 p.p.). In the prepay segment, net losses stood at 378k accesses, also affected by the lower volume of gross additions. **Smartphones** and 4G accesses maintained a strong level of growth (+75% and +62% y-o-y, respectively).

In the **fixed business**, the growth in **pay TV** was especially noteworthy (+6% y-o-y, up to 1.3m accesses), with net additions of 22k accesses in January-March, supported by the *Completa tu Trío* campaign (adding the TV service to FBB duo package customers). **Retail broadband accesses** totalled 1.7m and increased by 2% y-o-y, with net additions of 16k accesses in the quarter. Thus, accesses with speeds higher than 4Mb represented 77% of the base (+6 p.p. y-o-y), maintaining the focus on improving the mix of speeds, through the deployment of the FTTx and cable network, which reached a coverage of 2.9m premises passed (+42% y-o-y) and 842k connected homes as of March (+51% y-o-y).

Revenues totalled 620m in January-March and decreased 8.5% y-o-y, in line with the previous quarter (-8.0% y-o-y).

Mobile business revenues in January-March (335m) decreased by 12.2% y-o-y, and **mobile service revenues** by 14.6% y-o-y (in line with the previous quarter), with an improvement in the y-o-y decline in ARPU (-5.7% in the first quarter; -7.3% in the previous quarter). **Data revenues** remained stable (-0.6% y-o-y), improving their trend vs. the fourth quarter (-5.4%) after the removal of the *4G ilimitado* promotional campaign. **Handset revenues** in the first quarter increased by 7.6% y-o-y, due to the sale of high-end devices.

Fixed business revenues stood at 286m in January-March and decreased by 3.7% y-o-y (-6.5% in the previous quarter), affected by lower voice (-20.9%) and broadband revenues (-0.8%), partially offset by the higher pay TV revenues (+8.5% y-o-y) related to the increase in both accesses and ARPU (+2.6% y-o-y).

Operating expenses totalled 472m in the quarter (-2.6% y-o-y), reversing the trend mainly due to the lower commercial activity, which offset the negative impact of higher supplies both in interconnection costs, related to the aggressive competition in all-destination tariffs, and in content costs, related to the pay TV growth.

Thus, **OIBDA** totalled 156m in the first quarter of the year with a 21.9% y-o-y decline, and the **OIBDA margin** stood at 25.2% (-4.4 p.p. y-o-y).

CapEx (54m in January-March; -8.7% y-o-y) was devoted to expanding the UBB and 4G infrastructure in order to grow in new areas and offer higher speeds.

Operating cash flow (OIBDA-CapEx) totalled 103m at March 2017 (-27.4% y-o-y).

 - *Data traffic is defined as Terabytes used by the company customers, both upload and download (1TByte = 10¹² bytes). Promotional traffic is included. Traffic not associated to the Company's mobile customers (roaming-in, MVNOs, interconnection of third parties and other business lines) is also included. Traffic volume non-rounded.*
- (1) Excludes M2M.*

Table of Contents
Telefónica Colombia

(y-o-y changes in organic terms)

In the first quarter of the year, Telefónica Colombia showed solid operational growth, consolidating the positive trend in revenues and OIBDA, and increasing its revenue share in a highly competitive market.

Total accesses continued to grow and increased to 16.5m in the first quarter (+3% y-o-y).

Mobile accesses stood at 13.6m as of March (+4% y-o-y). In contract (+6%), net additions reached 40k accesses in the quarter, due to the simplification of the commercial offering and the containment of churn (1.5%; -0.3 p.p. y-o-y). In prepay, there were net losses of 162k accesses due to the increase in disconnections in the quarter as a result of seasonality. Meanwhile, the y-o-y growth trend was maintained in LTE accesses (+95%) and smartphones (+21%).

In the **fixed business**, the bundling strategy continued to be successfully implemented, leveraged on **pay TV** (526k accesses, +6% y-o-y) with net additions of 8k accesses in the quarter. **Retail broadband accesses** totalled 977k (-2% y-o-y), focusing on increasing speeds through the deployment of the FTTx network (33k homes connected in March; 360k premises passed).

Revenues totalled 388m in the quarter accelerating their y-o-y growth to 4.4% (+2.5% in the fourth quarter), supported by the increase in value accesses and the tariff updates as the main growth drivers. Stripping out the regulatory impact (the end of the asymmetry in mobile termination and the new regulation of MVNOs tariffs, from 1 February in all cases), revenues for January-March would have grown by 6.1% y-o-y.

Mobile business revenues (243m) were 6.8% up vs. January-March 2016. Growth in **mobile service revenues** accelerated to 4.2% y-o-y (+0.4% in the fourth quarter), showing strong growth in data revenues (+39.7% y-o-y) and with a y-o-y increase in ARPU of 0.3%. All this was despite the greater regulatory impact in the quarter (deducting 0.4 p.p. from the quarter's y-o-y growth). It is also worth highlighting the increase in **handset sales** in the quarter (+24.3% y-o-y) even with a lower level of subsidies.

Fixed business revenues stood at 145m in January-March, with 0.7% y-o-y growth, driven by higher pay TV revenues (+17.2% y-o-y) that offset the lower voice, access and IT revenues.

Operating expenses totalled 266m in the quarter and increased 3.4% y-o-y, mainly due to the higher commercial activity (handset consumption), partially offset by the positive performance of the Colombian peso vs. its depreciation in the first quarter of 2016.

Thus, **OIBDA** totalled 129m in the first quarter of the year, increasing by 5.0% y-o-y. **OIBDA margin** stood at 33.4% (+0.2 p.p. y-o-y).

CapEx (60m in January-March) showed a strong increase in the quarter (+54.7% y-o-y) due to the renewal of the licence associated with TV services, the continued improvement of the fixed broadband network and other transformation projects concerning LTE, UBB, systems and Big Data.

Operating cash flow (OIBDA-CapEx) totalled 70m in the quarter (-17.5% y-o-y).

Table of Contents**Telefónica México**

(y-o-y changes in organic terms)

First quarter results showed a stabilization in y-o-y ARPU decrease thanks to greater market rationality in the last months, with a reduction in both the period of validity of the top-ups and the capacity offered. However, revenue and OIBDA y-o-y trend continued to be affected by the strong erosion of unit prices that occurred in the previous year and by the positive effects recorded in the first quarter of 2016 derived from the interconnection agreements with other operators.

Mobile accesses totalled 25.7m and remained virtually stable y-o-y, although it is worth noting the 9% growth in the contract segment after posting +81k net adds in the quarter (positive net additions for the second consecutive quarter). However, total net losses in the quarter were 899k, explained by the prepay segment. Smartphones and LTE accesses continued to post a strong rate of growth, +9% and +70% y-o-y, respectively, and achieved penetrations of 48% (+4 p.p. y-o-y) and of 15% (+6 p.p. y-o-y). LTE population coverage increased by 11 p.p. over the last twelve months to 48% at March.

The **ARPU** decreased by 20.1% y-o-y in the quarter due to the drop in tariffs as a consequence of the competitive intensity, mainly in prepay. However, the improving trend initiated in the previous quarter was maintained (-22.3% and -30.1% y-o-y in the fourth and third quarter of 2016, respectively) and decreased by 3.4% vs. the previous quarter thanks to the improved outgoing ARPU.

Revenues totalled 314m and decreased by 16.5% compared to January-March 2016, while **mobile service revenues** fell 19.3%, mainly reflecting the lower outgoing revenues in prepay. However, the acceleration in y-o-y decline in mobile service revenues (-7.2% y-o-y in the previous quarter) was mainly explained by the positive impact of the interconnection agreements recorded in the first quarter of 2016; as the outgoing revenues showed an improved y-o-y trend.

Handset revenues increased 3.6% y-o-y, due to the lower level of subsidies that offset the lower levels of commercial activity with handset sales.

Operating expenses reached 256m in the quarter and fell 13.1% y-o-y, mainly due to the lower commercial expenses (reduced commercial activity and increased rationality in subsidies) and lower interconnection expenses (resulting from the aforementioned adjustment in the first quarter of 2016).

As such, **OIBDA** stood at 64m in the quarter and decreased by 33.8% y-o-y, reflecting the trend in revenues as well as impact of the interconnection agreements recorded in the first quarter of 2016. Thus, **OIBDA margin** stood at 20.5%, with a y-o-y decrease of 5.3 p.p.

CapEx totalled 43m and increased by 4.6% y-o-y, focused on 4G development and the improvement of 3G and the distribution channel. Likewise, as part of the resource optimisation strategy and after the agreement signed with Telcel at the end of 2016 for the provision of the national roaming service, the Company presented on 21 April its Extended Coverage plan, which will enable it to offer services to over 1,500 small villages across the country.

Thus, **operating cash flow (OIBDA-CapEx)** totalled 21m (-58.6% y-o-y).

Changes to the Perimeter

During the first quarter of 2017, the following changes have been made to the perimeter of consolidation:

On 13 March 2017, Telefónica increased its shareholding in Telefónica Deutschland Holding AG from 63.2% to 69.2% through a share swap agreement with KPN. Telefónica delivered 72.0m of its treasury shares (representing 1.43% of its share capital), in exchange for 178.5m shares of its subsidiary Telefónica Deutschland Holding AG, representing 6.0% of the share capital of the latter.

Additionally, on 20 February 2017, Telefónica reached an agreement for the sale to Taurus Bidco S.à.r.l. of up to 40% of the capital stock of Telxius for 1,275m (12.75 per share). The closing is subject to obtaining the corresponding regulatory approvals. After the transaction Telefónica will maintain control over Telxius.

Table of Contents

Alternative performance measures

Information included in compliance with the ESMA Guidelines, 5 October 2015, on Alternative Performance Measures (APM), applicable to published regulated information from 3 July 2016.

The management of the Group uses a series of APM in its decision-making, in addition to those expressly defined in the IFRS, because they provide additional information useful to assess the Group's performance, solvency and liquidity. These measures should not be viewed in isolation or as a substitute for the measures presented according to the IFRS.

The APM included in this report are: Operating Income Before Depreciation and Amortization, Net financial debt and Net financial debt plus commitments, leverage ratio, Free cash flow, Organic result and Underlying result.

Operating income before amortisation (OIBDA)

Operating income before depreciation and amortization (OIBDA) is calculated by excluding solely depreciation and amortization from operating income. OIBDA is used to track the performance of the business and to establish operating and strategic targets of the Telefónica Group companies. OIBDA is a commonly reported measure and is widely used among analysts, investors and other interested parties in the telecommunications industry, although not a measure explicitly defined in IFRS, and therefore, may not be comparable to similar indicators used by other companies. OIBDA should not be considered as a substitute for operating income or cash flow from operating activities.

The detailed reconciliation of Telefónica Group's OIBDA and Operating Income and each of its segments, can be found on this document (Telefónica Group and Segment P&Ls), as well as on the selected financial information contained on <https://www.telefonica.com/documents/162467/138879215/rdos17t1-data.zip>.

The OIBDA is also defined on the financial information published by the Group as of 31st December, 2016 (see particularly Note 2 and Note 4 of the Consolidated Annual Financial Statements of 2016).

Debt indicators

a) Net financial debt and Net financial debt plus commitments

As calculated by us, net financial debt includes: (i) current and non-current financial liabilities in our consolidated statement of financial position (which includes the negative mark-to-market value of derivatives) and (ii) other payables included in Trade and other payables (mainly corresponding to payables for deferred payment of radio spectrum). From these liabilities, it is deducted: i) the cash and cash equivalents, ii) the current financial assets (which includes short-term derivatives), iii) the positive mark-to-market value of derivatives with a maturity beyond one year, and iv) other interest-bearing assets (components of Trade and other receivables and Non-current financial assets in our consolidated statement of financial position).

We calculate net financial debt plus commitments by adding to net financial debt gross commitments related to employee benefits, and deducting the value of long-term assets associated with those commitments and the tax

benefits arising from the future payments of those commitments.

We believe that net financial debt and net financial debt plus commitments are meaningful for investors and analysts because they provide an analysis of our solvency using the same measures used by our management. We use net financial debt and net financial debt plus commitments to calculate internally certain solvency and leverage ratios used by Management. Nevertheless, neither net financial debt nor net financial debt plus commitments as calculated by us should be considered as a substitute for gross financial debt.

The reconciliation of Telefónica Group's gross financial debt according to the consolidated statement of financial position, net financial debt and net financial debt plus commitments at the end of March 2017 and 2016 can be found on page 13 of this document and on the financial information contained on <https://www.telefonica.com/documents/162467/138879215/rdos17t1-data.zip>. Net financial debt is also defined on the financial information published by the Group as of 31st December 2016 (see Note 2 of the Consolidated Annual Financial Statements of 2016).

Table of Contents

b) Leverage ratio

The leverage ratio is calculated as the ratio of net financial debt over OIBDA for the past 12 months, including or excluding the OIBDA of the companies which are incorporated or removed from the perimeter of consolidation, and excluding certain factors in line with the calculation of organic OIBDA.

The reconciliation of the leverage ratio can be found in the selected financial information contained on <https://www.telefonica.com/documents/162467/138879215/rdos17t1-data.zip> .

Free Cash Flow

The Group's Free cash flow is calculated starting from Net cash flow provided by operating activities as indicated in the consolidated statement of cash flows, deducting payment/proceeds on investments/divestments of property, plant and equipment and intangible assets (excluding cash received from the sale of real state), adding the cash received from government grants and deducting dividends paid to minority interests. The impact of the cancellation of commitments related to employee benefits is added back (originally included in the Net cash flow provided by operating activities) as it represents the payments for the principal of the debt incurred with those employees.

We believe that Free cash flow is a meaningful measure for investors and analysts because it provides an analysis of the cash flow available to protect solvency levels and to remunerate the parent company's shareholders. The same measure is used internally by our management. Nevertheless, Free cash flow as calculated by us should not be considered as a substitute for the consolidated statements of cash flows.

The reconciliation of net cash flow from operations, according to the consolidated statement of cash flows (on a straight-line basis) and the Group's Free cash flow according to the above definition, can be found on the selected financial information contained on <https://www.telefonica.com/documents/162467/138879215/rdos17t1-data.zip> . Free cash flow is also defined in the financial information published by the Group as of 31st December 2016 (see Note 2 of the Consolidated Annual Financial Statements 2016).

Organic Result

Year-on-year changes referred to in this document as organic or presented in organic terms intend to present a homogeneous comparison, by applying a constant perimeter of consolidation, constant exchange rates and other specific adjustments which are described herein. Organic variations, provide useful information about the evolution of the business due to several factors:

They provide information on the organic performance of the Group's operations in the different markets in which it operates, by maintaining constant exchange rates and perimeter, removing the impact of certain exogenous factors which may distort the year-on-year comparison since they are specific to a certain moment and not associated with the ordinary performance of the business (such as, for example, capital gains or losses from the sale of companies or restructuring associated to simplification plans and aimed at improving efficiency and future profitability of the Company) and therefore, helping the business performance analysis in homogeneous terms.

Edgar Filing: TELEFONICA S A - Form 6-K

Organic results are therefore used both internally and by the various agents in the market to conduct consistent monitoring of trends and of the operating performance of the business. Moreover, this data helps the comparison between the business performance of Telefónica and that of other operators, although the term *organic* is not a term defined in IFRS, and the *organic* measures included herein may not be comparable to similar measures presented by other companies.

For the purposes of this document, *organic* variation 2017/2016 is defined as the reported variation adjusted by the following factors:

Assumes average constant foreign exchange rates of 2016, excludes the impact of hyperinflation adjustment in Venezuela in both years

Table of Contents

Considers a constant perimeter of consolidation

At OIBDA and Operating cash flow levels, excludes write-downs, capital gains/losses from the sale of companies, sale of towers, restructuring expenses and non-recurrent material impacts

CapEx also excludes investment in spectrum

Reconciliation between reported data and organic revenue figures, OIBDA and operating cash flow can be found on the selected financial information contained on

<https://www.telefonica.com/documents/162467/138879215/rdos17t1-data.zip> .

Underlying Result

Underlying results or results in underlying terms and year-on-year changes referred to in this document as underlying or presented in underlying terms intend to present a comparison with the adjustment of certain factors which distort the year-on-year comparison of the business performance. Unlike the organic result, no exchange rate or perimeter adjustments are made to the underlying result. Likewise, the underlying result is calculated up to net income, while organic variations are calculated up to the Operating Cash Flow (OIBDA - CapEx). The underlying result and variations, provide useful information for the company and market agents because:

They provide additional information on the underlying performance of the Group's operations in the different markets, removing the impact of certain factors which distort the year-on-year comparison, as they are specific to a certain moment and not associated with the ordinary performance of the business, and facilitate the underlying analysis of the business

The inclusion of the business underlying performance is used both internally and by the various agents in the market to perform consistent monitoring of trends and operating performance of the business; this data also facilitates the comparison between the business performance of Telefónica and that of other operators, although the term underlying is not a term defined in IFRS, and the underlying measures included herein may not be comparable to similar measures presented by other companies

For the purposes of this document, underlying variation 2017/2016 is defined as the reported variation as adjusted by the following factors:

At OIBDA level, excludes write-downs, capital gains/losses from the sale of companies, sale of towers, restructuring expenses and material non-recurrent impacts.

At net income level, amortisation of assets from purchase price allocation processes is also excluded.

Edgar Filing: TELEFONICA S A - Form 6-K

Reconciliation between reported data and OIBDA underlying figures and net can be found on the selected financial information contained on <https://www.telefonica.com/documents/162467/138879215/rdos17t1-data.zip> .
