ITEM 5. OTHER EVENTS

On February 4, 2002, CMS Energy Corporation issued a press release announcing its fourth quarter earnings and webcast a conference call on those 2001 earnings and the Corporation's financial results. The following disclosures were provided in that press release and/or webcast conference call:

CMS Energy's Consolidated Earnings

For the year 2001, CMS Energy's net operating earnings were \$1.41 per share or \$185 million, operating earnings of \$2.21 per share or \$246 million. Consolidated reported net income for 2001 was \$185 million, or \$4.17 loss per share, compared to reported net income of \$36 million, or \$0.30 per share. Reconciling items excluded from net operating earnings reduced earnings by \$730 million, \$613 million previously recorded in the third quarter of 2001. These items included the effects of loss contingencies, reduced asset valuations (\$249 million), asset sales (\$37 million), discontinued operations (\$18

Edgar Filing: CMS ENERGY CORP - Form 8-K

retirement (\$18 million), Argentina-related charge (\$18 million) and the cumulative effect of for purchased power options (\$11 million). Items that were excluded from 2000 net operating earnings by \$210 million.

CMS Energy's 2001 net operating earnings were negatively affected primarily by increased power prices, a six month unplanned outage at the Palisades nuclear plant, near-record warm weather in the impact of the economic slowdown on electric and gas sales. The Palisades nuclear plant, which was in January 2002, is owned by Consumers Energy Company, which is CMS Energy's Michigan utility subsidiary.

CMS Energy's net operating earnings for the fourth quarter 2001 totaled a loss of \$0.13 per share, or \$17 million, compared to fourth quarter 2000 net operating earnings of \$0.79 per share, or \$171 million. Earnings for the fourth quarter of 2001 were a loss of \$1.03 per share, or a loss of \$138 million, compared to the reported loss of \$1.44 per share, or a loss of \$171 million, in the fourth quarter of 2000. The net operating loss was due in part to increased power supply costs because of the Palisades outage (22 cents per share), and near-record warm fourth quarter weather and continued weak economic conditions (22 cents per share).

Consumers Energy's Consolidated Earnings

For the year 2001, Consumers Energy's net income available to the common stockholder totaled \$211 million from the previous year. The decrease in earnings reflects an \$82 million after-tax decrease in earnings, related to Consumer Energy's Power Purchase Agreement with the Midland Cogeneration Facility. The earnings decrease also reflects significantly increased operating expense in 2001, primarily due to tax costs for replacement power supply costs due to a six month unscheduled outage at the Palisades nuclear plant. Net income for 2001 was also adversely impacted by \$11 million net of tax due to the implementation of the accounting principle for certain electric call option contracts. In addition, 2001 earnings were also impacted by the impact of reduced gas deliveries resulting from milder temperatures during both the first and second quarters. Electric and gas revenues were also adversely impacted by a decrease in electricity and gas demand from customers, reflecting the yearlong impact of an economic slowdown throughout Michigan. Electric sales totaled 40 billion kilowatt-hours, down 3.5 percent from the previous year. Natural gas deliveries totaled 1.5 billion cubic feet, down 10 percent from 2000. Consumers Energy hooked up 20,500 new electric customers and 10,000 new gas customers to its system.

Financial Improvement

In October 2001, CMS Energy announced significant changes in its business strategy in order to improve operating performance, provide more transparent and predictable future earnings, and lower its business risk. The strategy focuses on business growth primarily in North America. Several significant steps have been taken subsequent to the announcement of this strategy. In November 2001, a special purpose consolidated subsidiary of Consumers Energy issued \$1 billion of securitization bonds, which are asset-backed bonds with a higher credit rating than conventional corporate bonds. In December 2001, CMS Energy completed a previously announced \$32 million sale of its CMS Trunkline LNG business and the value created by a long-term contract for capacity at the Lake Charles, Louisiana terminal. This monetization was structured as a new joint venture, including newly issued debt, which will not be consolidated with CMS Energy and Panhandle reflecting the structure of the joint venture. In January 2002, CMS Energy completed the sale of its assets in Equatorial Guinea for \$100 million. The majority of the net proceeds from these three transactions were used to retire debt of Consumers Energy and Panhandle Eastern Pipe Line Company. In addition to the Equatorial Guinea sale, other CMS Energy assets have been identified and are currently being marketed for sale. The proceeds realized from the sale of these remaining assets may be materially different than the book value of these assets. CMS Energy cannot, however, predict when, nor make any assurances that, these asset sales will occur.

CMS Energy currently estimates the capital expenditures, including new lease commitments and other business developments through partnership and unconsolidated subsidiaries, will total \$2.9 billion in 2002.

Edgar Filing: CMS ENERGY CORP - Form 8-K

2002 through 2004. This estimate includes a 2002 capital expenditure estimate of \$975 million from the previous 2002 estimate. These estimates are prepared for planning purposes and are subject to change.

Argentina

In January 2002, the Republic of Argentina enacted the Law of Public Emergency and Foreign Exchange, among other things, repeals the fixed exchange rate of one US Dollar to one Argentina Peso previously established by Argentine law and converts all Dollar-denominated utility tariffs and energy contract obligations to the same one-to-one exchange rate and empowers the President of Argentina to renegotiate the exchangeability between the two currencies was temporarily suspended at December 31, 2001, CMS Energy's financial statements subsequently available, free-floating exchange rate of 1.65 Pesos per Dollar on January 11, 2002, Statement of Financial Accounting Standard No. 52 on Foreign Currency Translation, to record the effects of the resulting from the translation of Peso-denominated monetary assets and liabilities.

In February 2002, the Republic of Argentina issued additional decrees that required all monetary obligations payable in foreign currencies and all debts in foreign currencies to be converted into Pesos. The decrees also allow the Argentine judiciary essentially to rewrite private contracts denominated in Dollar-denominated currencies if the parties cannot agree on how to share equitably the impact of the conversion of Dollar-denominated contracts into Pesos.

The exchange rate on March 6, 2002 was 2.11 Pesos to the Dollar. While CMS Energy management considers the likely average or end-of-period Peso/Dollar exchange rates for 2002, the following table contains estimates of the impacts at various exchange rates that the changes in Argentine laws, the renegotiation of contract and tariff changes, the currency devaluation and other recent events in Argentina could have on the results of operation and financial condition. Amounts are calculated assuming that the exchange rate remains constant throughout the year. The initial adjustments include reductions to net income that could result from a change in functional currency from the Dollar to the Peso and corresponding losses on monetary assets and liabilities, as well as reduced asset valuations resulting from the unilateral actions of the Argentine government. Operating income reductions could result from the potential impacts on net project revenues of the renegotiation of utility tariffs and energy contract obligations that were previously tied to the Dollar. The reductions are divided between Argentine investments that CMS Energy intends to retain and investments that CMS Energy intends to sell. Investments in the latter category eventually may be classified as discontinued operations in CMS Energy's financial statements. Balance sheet exposures reflect the reduction to shareholder equity and the effects of lower net income on retained earnings. The amounts shown below are only estimates; management has not attempted to assess the impacts that the events in Argentina could have on CMS Energy's results of operation and financial condition.

Income Statement			
Exchange rate of Pesos to one Dollar	1.65	2.00	3.00
Initial net income adjustments (in millions)	\$ (84)	\$ (110)	\$ (150)
Operating income reductions (in cents per share):			
Retained investments	\$ (0.14)	\$ (0.18)	\$ (0.25)
Investments for sale	\$ (0.10)	\$ (0.11)	\$ (0.12)
Balance Sheet			
Exchange rate of Pesos to one Dollar	1.65	2.00	3.00
Reductions to shareholders' equity (in millions)	\$ (116)	\$ (148)	\$ (199)
