NOTES
(a) Percentages indicated are based on net assets of $\$ 335,120,063$.
(b) The aggregate identified cost on a tax basis is $\$ 505,270,816$, resulting in gross unrealized appreciation and depreciation of $\$ 30,684,233$ and $\$ 60,848,957$, respectively, or net unrealized depreciation of $\$ 30,164,724$.
(NON) Non-income-producing security.
(STP) The interest rate and date shown parenthetically represent the new interest rate to be paid and the date the fund will begin accruing interest at this rate.
(RES) Restricted, excluding 144A securities, as to public resale. The total market value of restricted securities held at June 30, 2009 was $\$ 2,991$, or less than $0.1 \%$ of net assets.
(PIK) Income may be received in cash or additional securities at the discretion of the issuer.
(SEG) This security, in part or in entirety, was pledged and segregated with the broker to cover margin requirements for futures contracts at June 30, 2009.
(c) Senior loans are exempt from registration under the Securities Act of 1933, as amended, but contain certain restrictions on resale and cannot be sold publicly. These loans pay interest at rates which adjust periodically. The interest rates shown for senior loans are the current interest rates at June 30, 2009. Senior loans are also subject to mandatory and/or optional prepayment which cannot be predicted. As a result, the remaining maturity may be substantially less than the stated maturity shown. Senior loans are purchased or sold on a when-issued or delayed delivery basis and may be settled a month or more after the trade date, which from time to time can delay the actual investment of available cash balances; interest income is accrued based on the terms of the securities. Senior loans can be acquired through an agent, by assignment from another holder of the loan, or as a participation interest in another holder $\square$ s portion of the loan. When the fund invests in a loan or participation, the fund is subject to the risk that an intermediate participant between the fund and the borrower will fail to meet its

## Edgar Filing: PUTNAM MASTER INTERMEDIATE INCOME TRUST - Form N-Q

obligations to the fund, in addition to the risk that the borrower under the loan may default on its obligations.
(e) The fund invested in Putnam Money Market Liquidity Fund, an open-end management investment company managed by Putnam Investment Management, LLC ("Putnam Management"), the fund's manager, a wholly-owned subsidiary of Putnam Investments, LLC. Investments in Putnam Money Market Liquidity Fund are valued at its closing net asset value each business day. Income distributions earned by the fund are recorded as interest income and totaled $\$ 17,574$ for the period ended June 30, 2009. During the period ended June 30, 2009, cost of purchases and proceeds of sales of investments in Putnam Money Market Liquidity Fund aggregated \$94,642,699 and $\$ 78,035,954$, respectively. Management fees charged to Putnam Money Market Liquidity Fund have been waived by Putnam Management.
(F) Is valued at fair value following procedures approved by the Trustees. Securities may be classified as a Level 2 or Level 3 for SFAS 157 disclosures based on the securities valuation inputs.
(i) Securities purchased with cash or received, that were pledged to the fund for collateral on certain derivative contracts.
(R) Real Estate Investment Trust.

At June 30, 2009, liquid assets totaling $\$ 263,275,144$ have been designated as collateral for open forward commitments, swap contracts, forward contracts, options and futures contracts.

Debt obligations are considered secured unless otherwise indicated.
144A after the name of an issuer represents securities exempt from registration under Rule 144A under the Securities Act of 1933, as amended. These securities may be resold in transactions exempt from registration, normally to qualified institutional buyers.

The rates shown on FRB and FRN are the current interest rates at June 30, 2009.
The dates shown on debt obligations are the original maturity dates.
IFB are securities that pay interest rates that vary inversely to changes in the market interest rates. As interest rates rise, inverse floaters produce less current income. The interest rates shown are the current interest rates at June 30, 2009.

## DIVERSIFICATION BY COUNTRY

Distribution of investments by country of risk at June 30, 2009 (as a percentage of Portfolio Value):
United States $90.3 \%$
$\begin{array}{lc}\text { Japan } & 1.8\end{array}$
Russia 1.5
Argentina 0.9
Brazil 0.8
Canada 0.6
Venezuela 0.5

## Total

100.0\%

Security valuation: Investments for which market quotations are readily available are valued at the last reported sales price on their principal exchange, or official closing price for certain markets. If no sales are reported -- as in the case of some securities traded over-the-counter -- a security is valued at its last reported bid price. Market quotations are not considered to be readily available for certain debt obligations; such investments are valued at fair value on the basis of valuations furnished by an independent pricing service approved by the Trustees or

# Edgar Filing: PUTNAM MASTER INTERMEDIATE INCOME TRUST - Form N-Q 

dealers selected by Putnam Investment Management, LLC ( $\square$ Putnam Management $\square$ ), the fund $\square$ s manager, an indirect wholly-owned subsidiary of Putnam Investments, LLC.

Such services or dealers determine valuations for normal institutional-size trading units of such securities using methods based on market transactions for comparable securities and various relationships, generally recognized by institutional traders, between securities (which considers such factors as security prices, yields, maturities and ratings). Many securities markets and exchanges outside the U.S. close prior to the close of the New York Stock Exchange and therefore the closing prices for securities in such markets or on such exchanges may not fully reflect events that occur after such close but before the close of the New York Stock Exchange. Accordingly, on certain days, the fund will fair value foreign equity securities taking into account multiple factors, including movements in the U.S. securities markets. The number of days on which fair value prices will be used will depend on market activity and it is possible that fair value prices will be used by the fund to a significant extent.

Securities quoted in foreign currencies, if any, are translated into U.S. dollars at the current exchange rate. To the extent a pricing service or dealer is unable to value a security or provides a valuation which Putnam Management does not believe accurately reflects the security's fair value, the security will be valued at fair value by Putnam Management. Certain investments, including certain restricted and illiquid securities and derivatives, are also valued at fair value following procedures approved by the Trustees. Such valuations and procedures are reviewed periodically by the Trustees.

Certain securities may be valued on the basis of a price provided by a single source.
The fair value of securities is generally determined as the amount that the fund could reasonably expect to realize from an orderly disposition of such securities over a reasonable period of time. By its nature, a fair value price is a good faith estimate of the value of a security in a current sale and does not reflect an actual market price, which may be different by a material amount.

Stripped securities: The fund may invest in stripped securities which represent a participation in securities that may be structured in classes with rights to receive different portions of the interest and principal. Interest-only securities receive all of the interest and principal-only securities receive all of the principal. If the interest-only securities experience greater than anticipated prepayments of principal, the fund may fail to recoup fully its initial investment in these securities. Conversely, principal-only securities increase in value if prepayments are greater than anticipated and decline if prepayments are slower than anticipated. The market value of these securities is highly sensitive to changes in interest rates.

Futures and options contracts: The fund may use futures and options contracts to hedge against changes in the values of securities the fund owns or expects to purchase, or for other investment purposes. The fund may also write options on swaps or securities it owns or in which it may invest to increase its current returns.

The potential risk to the fund is that the change in value of futures and options contracts may not correspond to the change in value of the hedged instruments. In addition, losses may arise from changes in the value of the underlying instruments, if there is an illiquid secondary market for the contracts, interest or exchange rates moving unexpectedly or if the counterparty to the contract is unable to perform. With futures, there is minimal counterparty credit risk to the fund since futures are exchange traded and the exchange $\square$ s clearinghouse, as counterparty to all exchange traded futures, guarantees the futures against default. When the contract is closed, the fund records a realized gain or loss equal to the difference between the value of the contract at the time it was opened and the value at the time it was closed. Realized gains and losses on purchased options are included in realized gains and losses on investment securities. If a written call option is exercised, the premium originally received is recorded as an addition to sales proceeds. If a written put option is exercised, the premium originally received is recorded as a reduction to the cost of investments.

Futures contracts are valued at the quoted daily settlement prices established by the exchange on which they trade. The fund and the broker agree to exchange an amount of cash equal to the daily fluctuation in the value of the futures contract. Such receipts or payments are known as $\square$ variation margin. $\square$ Exchange traded options are valued at the last sale price or, if no sales are reported, the last bid price for purchased options and the last ask price for written options. Options traded over-the-counter are valued using prices supplied by dealers. Outstanding contracts at period end are indicative of the volume of activity during the period.

Edgar Filing: PUTNAM MASTER INTERMEDIATE INCOME TRUST - Form N-Q

Forward currency contracts: The fund may buy and sell forward currency contracts, which are agreements between two parties to buy and sell currencies at a set price on a future date. These contracts are used to protect against a decline in value relative to the U.S. dollar of the currencies in which its portfolio securities are denominated or quoted (or an increase in the value of a currency in which securities a fund intends to buy are denominated, when a fund holds cash reserves and short term investments), or for other investment purposes. The U.S. dollar value of forward currency contracts is determined using current forward currency exchange rates supplied by a quotation service. The market value of the contract will fluctuate with changes in currency exchange rates. The contract is marked to market daily and the change in market value is recorded as an unrealized gain or loss. When the contract is closed, the fund records a realized gain or loss equal to the difference between the value of the contract at the time it was opened and the value at the time it was closed.

The fund could be exposed to risk if the value of the currency changes unfavorably, if the counterparties to the contracts are unable to meet the terms of their contracts or if the fund is unable to enter into a closing position. Outstanding contracts at period end are indicative of the volume of activity during the period.

Total return swap contracts: The fund may enter into total return swap contracts, which are arrangements to exchange a market-linked return for a periodic payment, both based on a notional principal amount, to help enhance the fund's return and manage the fund $\square$ s exposure to credit risk. To the extent that the total return of the security, index or other financial measure underlying the transaction exceeds or falls short of the offsetting interest rate obligation, the fund will receive a payment from or make a payment to the counterparty. Total return swap contracts are marked-to-market daily based upon quotations from market makers and the change, if any, is recorded as an unrealized gain or loss. Payments received or made are recorded as realized gains or losses. Certain total return swap contracts may include extended effective dates. Payments related to these swap contracts are accrued based on the terms of the contract. The fund could be exposed to credit or market risk due to unfavorable changes in the fluctuation of interest rates or in the price of the underlying security or index, the possibility that there is no liquid market for these agreements or that the counterparty may default on its obligation to perform. The fund $\square$ s maximum risk of loss from counterparty risk, is the fair value of the contract. This risk may be mitigated by having a master netting arrangement between the fund and the counterparty. Outstanding contracts at period end are indicative of the volume of activity during the period.

Interest rate swap contracts: The fund may enter into interest rate swap contracts, which are arrangements between two parties to exchange cash flows based on a notional principal amount, to manage the fund $\square$ s exposure to interest rates. An interest rate swap can be purchased or sold with an upfront premium. An upfront payment received by the fund is recorded as a liability on the fund's books. An upfront payment made by the fund is recorded as an asset on the fund's books. Interest rate swap contracts are marked-to-market daily based upon quotations from an independent pricing service or market makers and the change, if any, is recorded as unrealized gain or loss. Payments received or made are recorded as realized gains or losses. Certain interest rate swap contracts may include extended effective dates. Payments related to these swap contracts are accrued based on the terms of the contract. The fund could be exposed to credit or market risk due to unfavorable changes in the fluctuation of interest rates or if the counterparty defaults on its obligation to perform.

The fund $\square$ s maximum risk of loss from counterparty risk, is the fair value of the contract. This risk may be mitigated by having a master netting arrangement between the fund and the counterparty. Outstanding contracts at period end are indicative of the volume of activity during the period.

Credit default contracts: The fund may enter into credit default contracts to provide a measure of protection against risk of loss following a default, or other credit event in respect of issuers within an underlying index or a single issuer, or to gain credit exposure to an underlying index or issuer. In a credit default contract, the protection buyer typically makes an up front payment and a periodic stream of payments to a counterparty, the protection seller, in exchange for the right to receive a contingent payment upon the occurrence of a credit event on the reference obligation or all other equally ranked obligations of the reference entity. Credit events are contract specific but may include bankruptcy, failure to pay, restructuring and obligation acceleration. An upfront payment received by the fund, as the protection seller, is recorded as a liability on the fund $\square$ s books. An upfront payment made by the fund, as the protection buyer, is recorded as an asset on the fund $\square$ s books. Periodic payments received or paid by the fund are recorded as realized gains or losses.

The credit default contracts are marked to market daily based upon quotations from an independent pricing service or market makers and the change, if any, is recorded as an unrealized gain or loss. Upon the occurrence of a credit event, the difference between the par value and market value of the reference obligation, net of any

# Edgar Filing: PUTNAM MASTER INTERMEDIATE INCOME TRUST - Form N-Q 

proportional amount of the upfront payment, is recorded as a realized gain or loss.
In addition to bearing the risk that the credit event will occur, the fund could be exposed to market risk due to unfavorable changes in interest rates or in the price of the underlying security or index or the possibility that the fund may be unable to close out its position at the same time or at the same price as if it had purchased the underlying reference obligations. In certain circumstances, the fund may enter into offsetting credit default contracts which would mitigate its risk of loss. The fund $\square$ s maximum risk of loss from counterparty risk, either as the protection seller or as the protection buyer, is the fair value of the contract. This risk may be mitigated by having a master netting arrangement between the fund and the counterparty. Where the fund is a seller of protection, the maximum potential amount of future payments the fund may be required to make is equal to the notional amount of the relevant credit default contract. Outstanding contracts at period end are indicative of the volume of activity during the period.

Master agreements: The fund is a party to ISDA (International Swap and Derivatives Association, Inc.) Master Agreements ( $\square$ Master Agreements $\square$ ) with certain counterparties that govern over the counter derivative and foreign exchange contracts entered into from time to time. The Master Agreements may contain provisions regarding, among other things, the parties $\square$ general obligations, representations, agreements, collateral requirements, events of default and early termination. With respect to certain counterparties, in accordance with the terms of the Master Agreements, collateral posted to the fund is held in a segregated account by the fund $\square$ s custodian and with respect to those amounts which can be sold or repledged, are presented in the fund $\square \mathrm{s}$ portfolio; collateral pledged by the fund is segregated by the fund $\square$ s custodian and identified in The fund $\square$ s portfolio. Collateral can be in the form of cash or debt securities issued by the U.S. Government or related agencies or other securities as agreed to by the fund and the applicable counterparty. Collateral requirements are determined based on the fund $\square$ s net position with each counterparty. Termination events applicable to the fund may occur upon a decline in the fund $\square$ s net assets below a specified threshold over a certain period of time. Termination events applicable to counterparties may occur upon a decline in the counterparty $\square$ s long-term and short-term credit ratings below a specified level. In each case, upon occurrence, the other party may elect to terminate early and cause settlement of all derivative and foreign exchange contracts outstanding, including the payment of any losses and costs resulting from such early termination, as reasonably determined by the terminating party. Any decision by one or more of the fund $\square$ s counterparties to elect early termination could impact the fund's future derivative activity.

At June 30, 2009, the fund had net unrealized losses of $\$ 10,407,668$ on derivative contracts subject to the Master Agreements.

TBA purchase commitments: The fund may enter into $\square T B A \square$ (to be announced) commitments to purchase securities for a fixed unit price at a future date beyond customary settlement time. Although the unit price has been established, the principal value has not been finalized. However, it is anticipated that the amount of the commitments will not significantly differ from the principal amount. The fund holds, and maintains until settlement date, cash or high-grade debt obligations in an amount sufficient to meet the purchase price, or the fund may enter into offsetting contracts for the forward sale of other securities it owns. Income on the securities will not be earned until settlement date. TBA purchase commitments may be considered securities themselves, and involve a risk of loss if the value of the security to be purchased declines prior to the settlement date, which risk is in addition to the risk of decline in the value of the fund $\square s$ other assets. Unsettled TBA purchase commitments are valued at fair value of the underlying securities, according to the procedures described under $\square$ Security valuation $\square$ above. The contract is marked-to-market daily and the change in market value is recorded by the fund as an unrealized gain or loss.

Although the fund will generally enter into TBA purchase commitments with the intention of acquiring securities for its portfolio or for delivery pursuant to options contracts it has entered into, the fund may dispose of a commitment prior to settlement if Putnam Management deems it appropriate to do so.

TBA sale commitments: The fund may enter into TBA sale commitments to hedge its portfolio positions or to sell mortgage-backed securities it owns under delayed delivery arrangements. Proceeds of TBA sale commitments are not received until the contractual settlement date. During the time a TBA sale commitment is outstanding, equivalent deliverable securities or an offsetting TBA purchase commitment deliverable on or before the sale commitment date, are held as $\square$ cover $\square$ for the transaction.

## Edgar Filing: PUTNAM MASTER INTERMEDIATE INCOME TRUST - Form N-Q

Unsettled TBA sale commitments are valued at fair value of the underlying securities, generally according to the procedures described under $\square$ Security valuation $\square$ above. The contract is marked-to-market daily and the change in market value is recorded by the fund as an unrealized gain or loss. If the TBA sale commitment is closed through the acquisition of an offsetting TBA purchase commitment, the fund realizes a gain or loss. If the fund delivers securities under the commitment, the fund realizes a gain or a loss from the sale of the securities based upon the unit price established at the date the commitment was entered into.

Dollar rolls: To enhance returns, the fund may enter into dollar rolls (principally using TBAs) in which the fund sells securities for delivery in the current month and simultaneously contracts to purchase similar securities on a specified future date. During the period between the sale and subsequent purchase, the fund will not be entitled to receive income and principal payments on the securities sold. The fund will, however, retain the difference between the initial sales price and the forward price for the future purchase. The fund will also be able to earn interest on the cash proceeds that are received from the initial sale, on settlement date. The fund may be exposed to market or credit risk if the price of the security changes unfavorably or the counterparty fails to perform under the terms of the agreement.

In September 2006, the FASB issued Statement of Financial Accounting Standards No. 157, Fair Value Measurements ("SFAS 157"). SFAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007 and interim periods within those fiscal years. While the adoption of SFAS 157 does not have a material effect on the fund $\square$ s net asset value, it does require additional disclosures about fair value measurements. SFAS 157 establishes a three-level hierarchy for disclosure of fair value measurements. The valuation hierarchy is based upon the transparency of inputs to the valuation of the fund $\square \mathrm{s}$ investments. The three levels are defined as follows:

Level $1 \square$ Valuations based on quoted prices for identical securities in active markets.
Level $2 \square$ Valuations based on quoted prices in markets that are not active or for which all significant inputs are observable, either directly or indirectly.

Level $3 \square$ Valuations based on inputs that are unobservable and significant to the fair value measurement.
The following is a summary of the inputs used to value the fund $\square$ s net assets as of June 30,2009 :

Level 1
Level

| Asset-backed securities | $\$--\quad \$ 40,641,20$ |
| :--- | :--- |

1 , $40,641,24$

Common stocks:
Communication services
Consumer cyclicals

Energy $\quad$| 24,861 |
| :---: |

| Foreign government bonds and notes |  | -- | 27,568,28 |
| :---: | :---: | :---: | :---: |
| Mortgage-backed securities |  | -- | 141,761,0 |
| Preferred stocks |  | -- | 98,0 |
| Purchased options outstanding |  | -- | 11,033,1 |
| Senior loans |  | -- | 27,253,7 |
| U.S. Government and agency mortgage obligations |  | -- | 127,108,3 |
| Warrants |  | 6,785 | 14,2 |
| Short-term investments |  | 24,556,745 | 7,016,1 |
|  | Totals by level | \$24,588,391 | \$449,366,2 |
|  |  | Level 1 | Leve |
| Other financial instruments: |  | \$(4,627,311) | \$(63,221,62 |

Other financial instruments include futures, written options, TBA sale commitments, swaps and forward contracts.
The following is a reconciliation of Level 3 assets as of June 30, 2009:

| Investments in securities: | Balance as of September 30, 2008 | Accrued discounts/premiums | Realized gain/(los |
| :---: | :---: | :---: | :---: |
| Asset-backed securities | \$4,153,299 | \$-- | \$7 |
