Valuation of Investments:

Market values for securities are generally based on the last reported sales price on the principal exchange or market on which the security is traded, generally as of the close of regular trading on the NYSE (normally 4:00 p.m. Eastern time) on each valuation date. Any securities not listed, for which current over-the-counter market quotations or bids are readily available, are valued at the last quoted bid price or, if available, the mean of two such prices. Securities listed on foreign exchanges are valued at the last reported sales price except as described below; securities listed on foreign exchanges that are not traded on the valuation date are valued at the last quoted bid price. Forward currency contracts are valued at the current cost of offsetting the contracts. Investments in money market funds are valued at the fund's net asset value.

Bonds and other fixed-income securities that are not exchange-traded are valued on the basis of prices provided by pricing services which are based primarily on institutional trading in similar groups of securities, or by using brokers' quotations.

If a significant event materially affecting the value of securities occurs between the close of the exchange or market on which the security is principally traded and the time when the Fund's net asset value is calculated, or when current market quotations otherwise are determined not to be readily available or reliable (including restricted or other illiquid securities such as derivative instruments), such securities will be valued at their fair values as determined by, or in accordance with procedures approved by, the Board of Directors. The Valuation Committee of the Investment Manager may evaluate a variety of factors to determine the fair value of securities for which market quotations are determined not to be readily available or reliable. These factors include, but are not limited to, the type of security, the value of comparable securities, observations from financial institutions and relevant news events. Input from the Investment Manager's analysts will also be considered.

Fair Value Measurements:

Fair value is defined as the price that the Fund would receive to sell an asset, or would pay to transfer a liability, in an orderly transaction between market participants at the date of measurement. The Fair Value Measurements and Disclosures provisions of accounting principles generally accepted in the United States of America also establish a framework for measuring fair value, and a three-level hierarchy for fair value measurement that is based upon the transparency of inputs to the valuation of an asset or liability. Inputs may be observable or unobservable and refer, broadly, to the assumptions that market participants would use in pricing the asset or liability. Observable inputs reflect the assumptions that market participants would use in pricing the asset or liability based on market data obtained from sources independent of the Fund. Unobservable inputs reflect the Fund's own assumptions about the assumptions that market participants would use in pricing the asset or liability, developed based on the best information available in the circumstances. Each investment's fair value measurement level within the fair value hierarchy is based on the lowest level of any input that is significant to the overall fair value measurement. The three-level hierarchy of inputs is summarized below.

Level 1 unadjusted quoted prices in active markets for identical investments

Level 2 other significant observable inputs (including unadjusted quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)

Level 3 significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risks associated with investing in these securities.
