MARKET VECTORS AFRICA INDEX ETF**SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

Market Vectors Africa Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Dow Jones Africa Titans 50 IndexSM (the Africa Titans 50 Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.41 %
Total Annual Fund Operating Expenses ^(a)	0.91 %
Fee Waivers and Expense Reimbursement ^(a)	0.11 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.80 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense,

offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.78% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 82
3	\$ 279
5	\$ 493
10	\$ 1,109

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 24% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in equity securities, which may include depository receipts, of companies (i) domiciled in Africa, (ii) primarily listed on an exchange in Africa or (iii) that generate at least 50% of their revenues in Africa. Such companies may include small- and medium-capitalization companies. As of December 31, 2012, the Africa Titans 50 Index included 50 securities of companies with a market capitalization range of between approximately \$419 million and \$71.6 billion and a weighted average market capitalization of \$12.4 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

MARKET VECTORS AFRICA INDEX ETF (continued)

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Africa Titans 50 Index by investing in a portfolio of securities that generally replicates the Africa Titans 50 Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Africa Titans 50 Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund will normally invest at least 80% of its assets in securities that comprise the Africa Titans 50 Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Africa Titans 50 Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Africa Titans 50 Index concentrates in an industry or group of industries. As of December 31, 2012, the Africa Titans 50 Index was concentrated in the financial services sector and each of the energy, basic materials and telecommunications sectors represented a significant portion of the Africa Titans 50 Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in African Issuers. Investment in securities of companies domiciled in Africa, primarily listed on an exchange in Africa or that generate at least 50% of their revenues in Africa involves risks not typically associated with investments in securities of issuers in more developed countries or geographic regions that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets in Africa are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries or geographic regions. As a result, securities markets in Africa are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. There may also be a high concentration of trading volume in a small number of issuers representing a limited number of sectors or industries. Moreover, trading on securities markets may be suspended altogether.

Certain governments in Africa may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in those countries. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in countries in Africa. Moreover, certain countries in Africa may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of those countries and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in countries in Africa significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of certain African currencies may be subject to a high degree of fluctuation and the income received by the Fund will be principally in African currencies. The Fund's exposure to certain African currencies and changes in value of such African currencies versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the particular African currency.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The

Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Frontier Market Issuers. Most African countries are considered to be frontier markets. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in frontier market countries are magnified. Investments in securities of frontier market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Africa Titans 50 Index, may negatively affect the Fund's ability to replicate the performance of the Africa Titans 50 Index.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Africa Titans 50 Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the energy sector represents a significant portion of the Africa Titans 50 Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Africa Titans 50 Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may

be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Telecommunications Sector. The telecommunications sector includes companies that provide telecommunications services. Because as currently constituted the telecommunications sector represents a significant portion of the Africa Titans 50 Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

MARKET VECTORS AFRICA INDEX ETF (continued)

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium- capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Africa Titans 50 Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Africa Titans 50 Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Africa Titans 50 Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Africa Titans 50 Index, the Fund's return may deviate significantly from the return of the Africa Titans 50 Index. In addition, the Fund may not be able to invest in certain securities included in the Africa Titans 50 Index, or invest in them in the exact proportions they represent of the Africa Titans 50 Index, due to legal restrictions or limitations imposed by the governments of certain African countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Africa Titans 50 Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Africa Titans 50 Index is not based on fair value prices), the Fund's ability to track the Africa Titans 50 Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Africa Titans 50 Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Africa Titans 50 Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Africa Titans 50 Index, the Fund's assets are concentrated in the financial services sector;

therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 36.75% 2Q 09

Worst Quarter -18.09% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (7/10/2008)
Market Vectors Africa Index ETF (return before taxes)	22.15 %	-3.74 %
Market Vectors Africa Index ETF (return after taxes on distributions)	20.73 %	-4.47 %
Market Vectors Africa Index ETF (return after taxes on distributions and sale of Fund Shares)	14.40 %	-3.58 %
Dow Jones Africa Titans 50 Index SM (reflects no deduction for fees, expenses or taxes)	22.99 %	-2.50 %

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	July 2008
George Cao	Portfolio Manager	July 2008

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

MARKET VECTORS BRAZIL SMALL-CAP ETF**INVESTMENT OBJECTIVE**

Market Vectors Brazil Small-Cap ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Brazil Small-Cap Index (the Brazil Small-Cap Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.14 %
Total Annual Fund Operating Expenses ^(a)	0.64 %
Fee Waivers and Expense Reimbursement ^(a)	0.04 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.60 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.59% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 61
3	\$ 201
5	\$ 353
10	\$ 795

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 76% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Brazil Small-Cap Index is comprised of securities of Brazilian small-capitalization companies. A company is considered to be a Brazilian company if it is incorporated in Brazil or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Brazil. As of December 31, 2012, the Brazil Small-Cap Index included 71 securities of companies with a market capitalization range of between approximately \$212 million and \$4.4 billion and a weighted average market capitalization of \$1.7 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

MARKET VECTORS BRAZIL SMALL-CAP ETF (continued)

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Brazil Small-Cap Index by investing in a portfolio of securities that generally replicates the Brazil Small-Cap Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Brazil Small-Cap Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund will normally invest at least 80% of its assets in securities that comprise the Brazil Small-Cap Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Brazil Small-Cap Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Brazil Small-Cap Index concentrates in an industry or group of industries. As of December 31, 2012, the Brazil Small-Cap Index was concentrated in the consumer discretionary sector and each of the financial services and industrials sectors represented a significant portion of the Brazil Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Brazilian Issuers. The Brazilian government has exercised, and continues to exercise, significant influence over the Brazilian economy. The Brazilian economy has been characterized by frequent, and occasionally drastic, interventions by the Brazilian government, including the imposition of wage and price controls, exchange controls, limiting imports and other measures. The Brazilian government has often changed monetary, taxation, credit, trade and other policies to influence the core of Brazil's economy. Actions taken by the Brazilian government concerning the economy may have significant effects on Brazilian companies and on market conditions and prices of Brazilian securities.

The market for Brazilian securities is directly influenced by the flow of international capital, and economic and market conditions of certain countries, especially emerging market countries. As a result, adverse economic conditions or developments in other emerging market countries have at times significantly affected the availability of credit in the Brazilian economy and resulted in considerable outflows of funds and declines in the amount of foreign currency invested in Brazil.

Investments in Brazilian securities may be subject to certain restrictions on foreign investment. Brazilian law provides that whenever a serious imbalance in Brazil's balance of payments exists or is anticipated, the Brazilian government may impose temporary restrictions on the remittance to foreign investors of the proceeds of their investment in Brazil and on the conversion of the Brazilian Real into foreign currency.

Brazil has historically experienced high rates of inflation and a high level of debt, each of which may constrain economic growth. Despite rapid development in recent years, Brazil still suffers from high levels of corruption, crime and income disparity. Unanticipated political or social developments may result in sudden and significant investment losses. An increase in prices for commodities, such as petroleum, the depreciation of the Brazilian Real and future governmental measures seeking to maintain the value of the Brazilian Real in relation to the U.S. dollar, may trigger increases in inflation in Brazil and may slow the rate of growth of the Brazilian economy. Conversely, appreciation of the Brazilian Real relative to the U.S. dollar may lead to the deterioration of Brazil's current account and balance of payments as well as limit the growth of exports.

Because the Fund's assets will be invested primarily in equity securities of Brazilian issuers and the income received by the Fund will be principally in Brazilian Real. The Fund's exposure to the Brazilian Real and changes in value of the Brazilian Real versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and Brazilian Real.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In

addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in the Consumer Discretionary Sector. The consumer discretionary sector includes, among others, automotive, household durable goods and apparel manufacturers and companies that provide retail, lodging, leisure or food and beverage services. Because as currently constituted the Brazil Small-Cap Index is concentrated in the consumer discretionary sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the financial services sector represents a significant portion of the Brazil Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the Brazil Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in Small-Capitalization Companies. Small-capitalization companies may be more volatile and more likely than large- and medium-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small-capitalization companies could trail the returns on investments in securities of large- and medium-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Brazil Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Brazil Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the

MARKET VECTORS BRAZIL SMALL-CAP ETF (continued)

composition of the Brazil Small-Cap Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Brazil Small-Cap Index, the Fund's return may deviate significantly from the return of the Brazil Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the Brazil Small-Cap Index, or invest in them in the exact proportions they represent of the Brazil Small-Cap Index, due to legal restrictions or limitations imposed by the government of Brazil or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Brazil Small-Cap Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Brazil Small-Cap Index is not based on fair value prices), the Fund's ability to track the Brazil Small-Cap Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Brazil Small-Cap Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Brazil Small-Cap Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Brazil Small-Cap Index, the Fund's assets are concentrated in the consumer discretionary sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past

performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 25.09% 3Q 10

Worst Quarter: -29.14% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (5/12/2009)
Market Vectors Brazil Small-Cap Index ETF (return before taxes)	17.86 %	22.93 %
Market Vectors Brazil Small-Cap Index ETF (return after taxes on distributions)	17.25 %	21.24 %
Market Vectors Brazil Small-Cap Index ETF (return after taxes on distributions and sale of Fund Shares)	11.62 %	19.46 %
Market Vectors Brazil Small-Cap Index (reflects no deduction for fees, expenses or taxes)	18.82 %	23.69 %
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	16.00 %	15.64 %

MARKET VECTORS COLOMBIA ETF

SUMMARY INFORMATION**INVESTMENT OBJECTIVE**

Market Vectors Colombia ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Colombia Index (the Colombia Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	5.10 %
Total Annual Fund Operating Expenses ^(a)	5.60 %
Fee Waivers and Expense Reimbursement ^(a)	4.85 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.75 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense,

offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.75% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 77
3	\$ 1,237
5	\$ 2,384
10	\$ 5,191

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 29% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Colombia Index is comprised of securities of Colombian companies. A company is considered to be a Colombian company if it is incorporated in Colombia or if it generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Colombia. Such companies may include small- and medium-capitalization companies. As of December 31, 2012, the Colombia Index included 26 securities of companies with a market capitalization range of between approximately \$138 million and \$122.7 billion and a weighted average market capitalization of \$15.6 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Colombia Index by investing in a portfolio of securities that generally replicates the Colombia Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Colombia Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may also utilize depositary receipts to seek performance that corresponds to the Colombia Index.

The Fund will concentrate its investments in a particular industry or group of industries to the extent that the Colombia Index concentrates in an industry or group of industries. As of December 31, 2012, the Colombia Index was concentrated in the financial services sector and each of the energy, utilities and basic materials sectors represented a significant portion of the Colombia Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in Colombian Issuers. Investment in securities of Colombian issuers, including issuers located outside of Colombia that generate significant revenues from Colombia, involves special risk considerations not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. The Colombian economy has experienced high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates, all of which could negatively affect the value of companies located in Colombia and the value of your investment in the Fund. Colombia has experienced periods of political instability, violence associated with internal conflicts and drug-trafficking and high unemployment. Unanticipated political or social developments may result in sudden and significant investment losses. In addition, commodities (such as oil, natural gas and minerals) represent a significant percentage of Colombia's exports and its economy is particularly sensitive to fluctuations in commodity prices. Adverse economic events in another South American country may have a significant adverse effect on Colombia's economy and companies located in Colombia.

Because the Fund's assets will be invested primarily in equity securities of Colombian issuers, the income received by the Fund will be principally in Colombian pesos. The Fund's exposure to the Colombian peso and changes in value of the Colombian peso versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and Colombian pesos.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The Fund may invest in depositary receipts which involve similar risks to those associated with

investments in foreign securities. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Colombia Index, may negatively affect the Fund's ability to replicate the Colombia Index.

MARKET VECTORS COLOMBIA ETF (continued)

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Colombia Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in such institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the energy sector represents a significant portion of the Colombia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Utilities Sector. The utilities sector includes companies that produce or distribute electricity, gas or water. Because as currently constituted the utilities sector represents a significant portion of the Colombia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the utilities sector. Companies in the utilities sector may be adversely affected by changes in exchange rates, domestic and international competition, difficulty in raising adequate amounts of capital and governmental limitation on rates charged to customers.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Colombia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of these companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and

therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Colombia Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Colombia Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Colombia Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Colombia Index, the Fund's return may deviate significantly from the return of the Colombia Index. In addition, the Fund may not be able to invest in certain securities included in the Colombia Index, or invest in them in

the exact proportions they represent of the Colombia Index, due to legal restrictions or limitations imposed by the government of a particular country or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Colombia Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Colombia Index is not based on fair value prices), the Fund's ability to track the Colombia Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Colombia Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Colombia Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Colombia Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Colombia Index, the Fund's assets are concentrated in the financial services sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the last calendar year. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

MARKET VECTORS EGYPT INDEX ETF**INVESTMENT OBJECTIVE**

Market Vectors Egypt Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Egypt Index (the Egypt Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.58 %
Total Annual Fund Operating Expenses ^(a)	1.08 %
Fee Waivers and Expense Reimbursement ^(a)	0.12 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.96 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.94% of the Fund's average daily net assets per year until May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 98
3	\$ 332
5	\$ 584
10	\$ 1,306

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 50% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund will normally invest at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Egypt Index is comprised of securities of Egyptian companies. A company is considered to be an Egyptian company if it is incorporated in Egypt or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Egypt. Such companies may include small- and medium-capitalization companies. As of December 31, 2012, the Egypt Index included 25 securities of companies with a market capitalization range of between approximately \$108 million and \$8.3 billion and a weighted average market capitalization of \$2.0 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

MARKET VECTORS EGYPT INDEX ETF (continued)

The Fund, using a passive or indexing investment approach will attempt to approximate the investment performance of the Egypt Index by investing in a portfolio of securities that generally replicates the Egypt Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Egypt Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Egypt Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Egypt Index concentrates in an industry or group of industries. As of December 31, 2012, the Egypt Index was concentrated in the financial services sector and each of the basic materials, industrials and telecommunications sectors represented a significant portion of the Egypt Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Egyptian Issuers. Investment in securities of Egyptian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, confiscatory taxation, regional conflict, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Issuers in Egypt are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable.

The securities markets in Egypt are underdeveloped and may be less correlated to global economic cycles than those markets located in more developed countries. Securities markets in Egypt are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether. Recently, the securities markets in Egypt were closed for an extended period of time due to political and civil unrest.

The government in Egypt may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Egypt. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Egypt. Moreover, Egypt may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Egypt and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Egypt significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

Emerging markets can experience high rates of inflation, deflation and currency devaluation. The value of the Egyptian pound may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity

securities of Egyptian issuers and the income received by the Fund will be principally in Egyptian pounds. The Fund's exposure to the Egyptian pound and changes in value of the Egyptian pound versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Egyptian pound.

In Egypt, the marketability of quoted shares is limited due to the restricted opening hours of stock exchanges (normally 10:30 a.m. to 2:30 p.m., Sunday to Thursday), a narrow range of investors and a relatively high proportion of market value being concentrated in the hands of a relatively small number of shareholders. In addition, because Egyptian stock exchanges on which the Fund's portfolio securities may trade are open when the NYSE Arca is closed, the Fund may be subject to heightened risk associated with market movements.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of

economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risks of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Egypt Index, may negatively affect the Fund's ability to replicate the performance of the Egypt Index.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Egypt Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Egypt Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the

Egypt Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Telecommunications Sector. The telecommunications sector includes companies that provide telecommunications services. Because as currently constituted the telecommunications sector represents a significant portion of the Egypt Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium- capitalization companies could trail the returns on investments in securities of large-capitalization companies.

MARKET VECTORS EGYPT INDEX ETF (continued)

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Egypt Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Egypt Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Egypt Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Egypt Index, the Fund's return may deviate significantly from the return of the Egypt Index. In addition, the Fund may not be able to invest in certain securities included in the Egypt Index or invest in them in the exact proportions they represent of the Egypt Index, due to legal and regulatory rules and limitations imposed by the government of Egypt. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Egypt Index is based on the securities' closing prices on local foreign markets (*i.e.*, the value of the Egypt Index is not based on fair value prices), the Fund's ability to track the Egypt Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Egypt Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company represented in the Egypt Index. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Egypt Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Egypt Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Egypt Index, the Fund's assets are concentrated in the financial services sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Year

Best Quarter: 33.71% 1Q 12

Worst Quarter: -26.46% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (2/16/2010)
Market Vectors Egypt Index ETF (return before taxes)	41.94 %	-12.09 %
Market Vectors Egypt Index ETF (return after taxes on distributions)	38.55 %	-13.22 %
Market Vectors Egypt Index ETF (return after taxes on distributions and sale of Fund Shares)	27.26 %	-10.71 %
Market Vectors Egypt Index (reflects no deduction for fees, expenses or taxes)	43.56 %	-12.79 %
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	16.00 %	12.00 %

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

MARKET VECTORS GERMANY SMALL-CAP ETF

INVESTMENT OBJECTIVE

Market Vectors Germany Small-Cap ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Germany Small-Cap Index (the Germany Small-Cap Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	3.46 %
Total Annual Fund Operating Expenses ^(a)	3.96 %
Fee Waivers and Expense Reimbursement ^(a)	3.41 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.55 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs,

trading expenses, taxes and extraordinary expenses) from exceeding 0.55% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 56
3	\$ 892
5	\$ 1,745
10	\$ 3,958

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in

higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 35% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Germany Small-Cap Index is comprised of securities of German small-capitalization companies. A company is considered to be a German company if it is incorporated in Germany or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Germany. As of December 31, 2012, the Germany Small-Cap Index included 82 securities of companies with a market capitalization range of between approximately \$99 million and \$4.2 billion and a weighted average market capitalization of \$1.9 billion. The Fund will normally invest at least 80% of its total assets in securities of small-capitalization German companies. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Germany Small-Cap Index by investing in a portfolio of securities that generally replicates the Germany Small-Cap Index. The

Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Germany Small-Cap Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Germany Small-Cap Index concentrates in an industry or group of industries. As of December 31, 2012, the Germany Small-Cap Index was concentrated in the industrials sector and each of the basic materials, consumer discretionary, financial services and information technology sectors represented a significant portion of the Germany Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in German Issuers. Germany has an export dependent economy and therefore relies heavily on trade with key trading partners, including the United States and other countries in Europe. Exports account for more than one-third of Germany's output and are a key element in German economic expansion. Reduction in spending by European countries on German products and services or negative changes in any of these countries may cause an adverse impact on the German economy. Decreasing U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates or a recession in the United States may also have an adverse impact on the German economy.

The Economic and Monetary Union of the European Union (the EU) requires compliance with restrictions on inflation, deficits, interest rates, public debt and fiscal and monetary controls, each of which may significantly affect each country in Europe. Decreasing imports or exports, changes in governmental or EU regulations on trade, changes in the exchange rate of the Euro, the default or threat of default by an EU country on its sovereign debt, and recessions in an EU country may have a significant adverse effect on the economies of EU countries. The European financial markets have recently experienced volatility and adverse trends due to concerns about rising government debt levels of several European countries, including Greece, Spain, Ireland, Italy and Portugal. Responses to the financial problems by European governments, central banks and other bodies, including austerity measures and reforms may not work, may result in social unrest and may limit future economic growth or have other uncertain or unintended consequences. In addition, one or more countries may abandon the Euro and/or withdraw from the EU, which could have significant and far-reaching consequences. These events have adversely affected the exchange rate of the Euro and may continue to significantly affect other countries in Europe. The German economy, along with certain other EU nations, experienced a significant slowdown during the recent financial crisis.

Investing in German issuers involves political, social and regulatory risks. Certain sectors and regions of Germany have experienced high unemployment and social unrest. These issues may have an adverse affect on the German economy or the German industries or sectors in which the Fund invests. Heavy regulation of labor and product markets is pervasive in Germany. These regulations may stifle economic growth or result in extended recessionary periods.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have

historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Germany Small-Cap Index, may negatively affect the Fund's ability to replicate the performance of the Germany Small-Cap Index.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and

MARKET VECTORS GERMANY SMALL-CAP ETF (continued)

distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the Germany Small-Cap Index is concentrated in the industrials sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Germany Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Discretionary Sector. The consumer discretionary sector includes, among others, automotive, household durable goods and apparel manufacturers and companies that provide retail, lodging, leisure or food and beverage services. Because as currently constituted the consumer discretionary sector represents a significant portion of the Germany Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the financial services sector represents a significant portion of the Germany Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. As such, the Fund may be sensitive to changes in, and its performance may depend on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Information Technology Sector. The information technology sector includes software developers, providers of information technology consulting and services and manufacturers and distributors of computers, peripherals, communications equipment and semiconductors. Because as currently constituted the information technology sector represents a significant portion of the Germany Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the information technology sector. Information technology companies face intense competition, both domestically and internationally, which may have an adverse affect on profit margins. Information technology companies may have

limited product lines, markets, financial resources or personnel. The products of information technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Risk of Investing in Small-Capitalization Companies. Small-capitalization companies may be more volatile and more likely than large- and medium-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of these companies could trail the returns on investments in securities of large- and medium-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend

risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the stock market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Germany Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Germany Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Germany Small-Cap Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Germany Small-Cap Index, the Fund's return may deviate significantly from the return of the Germany Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the Germany Small-Cap Index, or invest in them in the exact proportions they represent of the Germany Small-Cap Index, due to legal restrictions or limitations imposed by the government of Germany or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Germany Small-Cap Index is based on securities' closing price on local foreign markets (*i.e.*, the value of the Germany Small-Cap Index is not based on fair value prices), the Fund's ability to track the Germany Small-Cap Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Germany Small-Cap Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Germany Small-Cap Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Germany Small-Cap Index, the Fund's assets are concentrated in the industrials sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

Edgar Filing: MARKET VECTORS ETF TRUST - Form 497

The bar chart that follows shows how the Fund performed for the last calendar year. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

MARKET VECTORS GERMANY SMALL-CAP ETF (continued)**Annual Total Returns Calendar Years**

Best Quarter: 19.54% 1Q 12

Worst Quarter: -7.72% 2Q 12

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (4/4/2011)
Market Vectors Germany Small-Cap Index ETF (return before taxes)	30.32 %	-5.00 %

George Cao	Portfolio Manager	April 2011

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

MARKET VECTORS GULF STATES INDEX ETF**INVESTMENT OBJECTIVE**

Market Vectors Gulf States Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Dow Jones GCC Titans 40 IndexSM (the GCC Titans 40 Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	2.69 %
Total Annual Fund Operating Expenses ^(a)	3.19 %
Fee Waivers and Expense Reimbursement ^(a)	2.20 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.99 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.98% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 101
3	\$ 777
5	\$ 1,477
10	\$ 3,342

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 16% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in equity securities, which may include depositary receipts, of companies (i) belonging to the Gulf Cooperation Council (the GCC), (ii) primarily listed on an exchange in countries belonging to the GCC or (iii) that generate at least 50% of their revenues in countries belonging to the GCC. Such companies may include micro-, small- and medium-capitalization companies. Countries belonging to the GCC may include Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates (UAE). As of December 31, 2012, the GCC Titans 40 Index included 40 securities of companies with a market capitalization range of between approximately \$353 million and \$25.2 billion and a weighted average market capitalization of \$7.5 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

MARKET VECTORS GULF STATES INDEX ETF (continued)

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the GCC Titans 40 Index by investing in a portfolio of securities that generally replicates the GCC Titans 40 Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the GCC Titans 40 Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund will normally invest at least 80% of its total assets in securities that comprise the GCC Titans 40 Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the GCC Titans 40 Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the GCC Titans 40 Index concentrates in an industry or group of industries. As of December 31, 2012, the GCC Titans 40 Index was concentrated in the financial services sector and each of the telecommunications and industrials sectors represented a significant portion of the GCC Titans 40 Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in GCC Issuers. Investment in securities of companies domiciled in countries belonging to the GCC, primarily listed on an exchange in countries belonging to the GCC or that generate at least 50% of their revenues in countries belonging to the GCC involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, terrorist activities, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets in certain countries belonging to the GCC are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in certain countries belonging to the GCC are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

Certain economies in the GCC depend to a significant degree upon exports of primary commodities such as oil. A sustained decrease in commodity prices would have a significant negative impact on all aspects of the economy in certain countries belonging to the GCC. Certain GCC governments have exercised and continue to exercise substantial influence over many aspects of the private sector. In certain cases, the government owns or controls many companies. Accordingly, governmental actions in the future could have a significant effect on economic conditions in certain countries belonging to the GCC.

Certain governments in certain countries belonging to the GCC may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in those countries. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in certain countries belonging to the GCC. Moreover, certain countries belonging to the GCC may require governmental

approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of those countries and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in certain countries belonging to the GCC significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the currencies of certain countries belonging to the GCC may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of companies domiciled in countries belonging to the GCC, primarily listed on an exchange in countries belonging to the GCC or that generate at least 50% of their revenues in countries belonging to the GCC and the income received by the Fund will be principally in currencies of such countries. The Fund's exposure to the currencies of certain countries belonging to the GCC and changes in value of such currencies versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the particular currency of such countries belonging to the GCC.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Frontier Market Issuers. GCC countries are considered to be frontier markets. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in frontier market countries are magnified. Investments in securities of frontier market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the GCC Titans 40 Index, may negatively affect the Fund's ability to replicate the performance of the GCC Titans 40 Index.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the GCC Titans 40 Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Telecommunications Sector. The telecommunications sector includes companies that provide telecommunications services. Because as currently constituted the telecommunications sector represents a significant

portion of the GCC Titans 40 Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the GCC Titans 40 Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world

MARKET VECTORS GULF STATES INDEX ETF (continued)

events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the GCC Titans 40 Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the GCC Titans 40 Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the GCC Titans 40 Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the GCC Titans 40 Index, the Fund's return may deviate significantly from the return of the GCC Titans 40 Index. In addition, the Fund may not be able to invest in certain securities included in the GCC Titans 40 Index, or invest in them in the exact proportions they represent of the GCC Titans 40 Index, due to legal restrictions or limitations imposed by the governments of certain countries belonging to the GCC or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the GCC Titans 40 Index is based on securities' closing price on local foreign markets (*i.e.*, the value of the GCC Titans 40 Index is not based on fair value prices), the Fund's ability to track the GCC Titans 40 Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the GCC Titans 40 Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the

impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single security may have a greater impact on the Fund's NAV and may make the Fund more volatile than diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the GCC Titans 40 Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the GCC Titans 40 Index, the Fund's assets are concentrated in the financial services sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 33.00% 2Q 09

Worst Quarter: -16.07% 1Q 09

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (7/22/2008)
Market Vectors Gulf States Index ETF (return before taxes)	5.30 %	-12.23 %
Market Vectors Gulf States Index ETF (return after taxes on distributions)	4.25 %	-12.83 %
Market Vectors Gulf States Index ETF (return after taxes on distributions and sale of Fund Shares)	3.45 %	-10.32 %
Dow Jones GCC Titans 40 Index SM (reflects no deduction for fees, expenses or taxes)	6.32 %	-11.77 %
S&P 500 [®] Index (reflects no deduction for fees, expenses or taxes)	16.00 %	4.85 %

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

MARKET VECTORS INDIA SMALL-CAP INDEX ETF**INVESTMENT OBJECTIVE**

Market Vectors India Small-Cap Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® India Small-Cap Index (the India Small-Cap Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses ^(a)	1.18 %
Total Annual Fund Operating Expenses ^(b)	1.68 %
Fee Waivers and Expense Reimbursement ^(b)	0.77 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(b)	0.91 %

(a) Other Expenses reflects the expenses at both the Fund and the Fund's wholly-owned subsidiary (the Subsidiary) levels.

(b) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund and Subsidiary expenses to the extent necessary to

prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses of the Fund and the Subsidiary) from exceeding 0.85% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 93
3	\$ 454
5	\$ 840
10	\$ 1,923

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 65% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund currently intends to achieve its investment objective by investing substantially all of its assets in the Subsidiary, a wholly-owned subsidiary located in the Republic of Mauritius (Mauritius). The Subsidiary in turn will normally invest at least 80% of its total assets in securities that comprise the Fund's benchmark index, and depository receipts based on the securities in the Fund's benchmark index. The India Small-Cap Index is comprised of Indian small-capitalization companies selected on the basis of their relative market capitalizations. A company is considered an Indian company if it is incorporated in India or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in India. As a result of the Fund's

MARKET VECTORS INDIA SMALL-CAP INDEX ETF (continued)

investment in the Subsidiary, the Fund will normally invest at least 80% of its total assets in securities of small-capitalization Indian companies. As of December 31, 2012, the India Small-Cap Index included 99 securities of companies with a market capitalization range of between approximately \$76 million and \$1.1 billion and a weighted average market capitalization of \$508 million. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders. The Adviser serves as investment adviser to both the Fund and the Subsidiary and, through this investment structure, the Subsidiary and the Fund expect to benefit from favorable tax treatment by the Indian Government pursuant to a tax treaty between India and Mauritius. Except where otherwise indicated, the term "Fund," as used throughout this Summary Section, refers to the Fund and/or the Subsidiary, as applicable.

The Fund, using a passive or indexing investment approach, will attempt to approximate the investment performance of the India Small-Cap Index by investing in a portfolio of securities that generally replicates the India Small-Cap Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the India Small-Cap Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may also utilize convertible securities, depositary receipts and participation notes to seek performance that corresponds to the India Small-Cap Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the India Small-Cap Index concentrates in an industry or group of industries. As of December 31, 2012, each of the consumer discretionary, basic materials, financial services, industrials and information technology sectors represented a significant portion of the India Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Indian Issuers. Investment in securities of Indian issuers involve special considerations not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, greater government control over the economy, including the risk that the Indian government may decide not to continue to support economic reform programs, political and legal uncertainty, currency fluctuations or blockage of foreign currency exchanges and the risk of nationalization or expropriation of assets. Issuers in India are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable. India is also located in a part of the world that has historically been prone to natural disasters, such as earthquakes and tsunamis. Any such natural disaster could cause a significant impact on the Indian economy and could impact operations of the Subsidiary, causing an adverse impact on the Fund. In addition, religious and border disputes persist in India. Moreover, India has experienced civil unrest and hostilities with neighboring countries, including Pakistan, and the Indian government has confronted separatist movements in several Indian states. India has experienced acts of terrorism that has targeted foreigners. Such acts of terrorism have had a negative impact on tourism, an important sector of the Indian economy.

The securities market of India is considered an emerging market characterized by a small number of listed companies with significantly smaller market capitalizations, greater price volatility and substantially less liquidity than developed markets, such as the United States. These factors, coupled with restrictions on foreign investment and other factors,

limit the supply of securities available for investment by the Fund. This will affect the rate at which the Fund is able to invest in India, the purchase and sale prices for such securities and the timing of purchases and sales. Emerging markets can experience high rates of inflation, deflation and currency devaluation. Certain restrictions on foreign investment may decrease the liquidity of the Fund's portfolio or inhibit the Fund's ability to track the India Small-Cap Index. In addition, the Reserve Bank of India (RBI), the Indian counterpart of the Federal Reserve Bank in the United States, imposes certain limits on the foreign ownership of Indian securities. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in India and may inhibit the Fund's ability to track the India Small-Cap Index.

The value of the Indian rupee may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Indian issuers and the income received by the Fund will be principally in Indian rupees. The Fund's exposure to the Indian rupee and changes in value of the Indian rupee versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Indian rupee.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political

instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the India Small-Cap Index, may negatively affect the Fund's ability to replicate the performance of the India Small-Cap Index.

Risk of Investing in the Consumer Discretionary Sector. The consumer discretionary sector includes, among others, automotive, household durable goods and apparel manufacturers and companies that provide retail, lodging, leisure or food and beverage services. Because as currently constituted the consumer discretionary represents a significant portion of the India Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the India Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the financial services sector represents a significant portion of the India Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall

condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the India Small-Cap Index, the

MARKET VECTORS INDIA SMALL-CAP INDEX ETF (continued)

Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Information Technology Sector. The information technology sector includes software developers, providers of information technology consulting and services and manufacturers and distributors of computers, peripherals, communications equipment and semiconductors. Because as currently constituted the information technology sector represents a significant portion of the India Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the information technology sector. Information technology companies face intense competition, both domestically and internationally, which may have an adverse affect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Risk of Investing in Small-Capitalization Companies. Small-capitalization companies may be more volatile and more likely than large- and medium-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small-capitalization companies could trail the returns on investments securities of large- and medium-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the India Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the India Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the India Small-Cap Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the India

Small-Cap Index, the Fund's return may deviate significantly from the return of the India Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the India Small-Cap Index or invest in them in the exact proportions they represent of the India Small-Cap Index due to legal restrictions or limitations imposed by India or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the India Small-Cap Index is based on the securities' closing price on local foreign markets (*i.e.*, the value of the India Small-Cap Index is not based on fair value prices), the Fund's ability to track the India Small-Cap Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the India Small-Cap Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most other exchange-traded funds (ETFs), the Fund expects to effect creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund s NAV and may make the Fund more volatile than would be the case for a more diversified funds.

Concentration Risk. The Fund s assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the India Small-Cap Index concentrates in a particular sector or sectors or industry or group of industries. To the extent the Fund s investments are concentrated in a particular sector or industry, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector or industry will negatively impact the Fund to a greater extent than if the Fund s assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund s average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund s performance from year to year and by showing how the Fund s average annual returns for one year and since inception compared with the Fund s benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund s past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Year

Best Quarter: 36.28% 1Q 12
 Worst Quarter: -27.31% 4Q 11

MARKET VECTORS INDIA SMALL-CAP INDEX ETF (continued)**Average Annual Total Returns for the Periods Ended December 31, 2012**

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (8/23/2010)
Market Vectors India Small-Cap Index ETF (return before taxes)	25.54 %	-21.16 %
Market Vectors India Small-Cap Index ETF (return after taxes on distributions)	25.27 %	-21.38 %
Market Vectors India Small-Cap Index ETF (return after taxes on distributions and sale of Fund Shares)	16.46 %	-17.64 %
Market Vectors India Small-Cap Index (reflects no deduction for fees, expenses or taxes)	24.72 %	-21.24 %
S&P 500 [®] Index (reflects no deduction for fees, expenses or taxes)	16.00 %	16.28 %

PORTFOLIO MANAGEMENT

George Cao	Portfolio Manager	August 2010

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

MARKET VECTORS INDONESIA INDEX ETF**INVESTMENT OBJECTIVE**

Market Vectors Indonesia Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Indonesia Index (the Indonesia Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.15 %
Total Annual Fund Operating Expenses ^(a)	0.65 %
Fee Waivers and Expense Reimbursement ^(a)	0.06 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.59 %

(a) The Adviser has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary

expenses)
 from
 exceeding
 0.57% of the
 Fund's
 average daily
 net assets per
 year until at
 least May 1,
 2014. During
 such time, the
 expense
 limitation is
 expected to
 continue until
 the Fund's
 Board of
 Trustees acts
 to discontinue
 all or a
 portion of
 such expense
 limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 60
3	\$ 202
5	\$ 356
10	\$ 805

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 19% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Indonesia Index is comprised of securities of Indonesian companies. A company is considered to be an Indonesian company if it is incorporated in Indonesia or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Indonesia. Such companies may include medium-capitalization companies. As of December 31, 2012, the Indonesia Index included 40 securities of companies with a market capitalization range of between approximately \$121 million and \$31.9 billion and a weighted average market capitalization of \$12.6 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days prior written notice to shareholders.

MARKET VECTORS INDONESIA INDEX ETF (continued)

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Indonesia Index by investing in a portfolio of securities that generally replicates the Indonesia Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Indonesia Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund will normally invest at least 80% of its assets in securities that comprise the Indonesia Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Indonesia Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Indonesia Index concentrates in an industry or group of industries. As of December 31, 2012, the Indonesia Index was concentrated in the financial services sector and each of the basic materials, consumer discretionary, consumer staples and energy sectors represented a significant portion of the Indonesia Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Indonesian Issuers. Investment in securities of Indonesian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, currency devaluations, high rates of inflation, corruption, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, acts of terrorism, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. In addition, the Indonesian economy is dependent upon trade with other nations, including China, Japan, Singapore and the United States. Indonesia has experienced acts of terrorism that have targeted foreigners. Such acts of terrorism have had a negative impact on tourism, an important sector of the Indonesia economy.

The securities markets of Indonesia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Indonesia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Indonesia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Indonesia. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Indonesia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Indonesia and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Indonesia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Indonesian Rupiah may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Indonesian issuers and the income received by the Fund will be principally in Indonesian Rupiah. The Fund's exposure to the Indonesian Rupiah and changes in value of the Indonesian Rupiah versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Indonesian Rupiah.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may

negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Indonesia Index, may negatively affect the Fund's ability to replicate the performance of the Indonesia Index.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Indonesia Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Indonesia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Discretionary Sector. The consumer discretionary sector includes, among others, automotive, household durable goods and apparel manufacturers and companies that provide retail, lodging, leisure or food and beverage services. Because as currently constituted the consumer discretionary sector represents a significant portion of the Indonesia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and

labor relations.

Risk of Investing in the Consumer Staples Sector. The consumer staples sector includes, among others, manufacturers and distributors of food, beverages and tobacco, food and drug retailers and products of non-durable household goods and consumer products. Because as currently constituted the consumer staples sector represents a significant portion of the Indonesia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer staples sector. These companies may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the energy sector represents a significant portion of the Indonesia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price

MARKET VECTORS INDONESIA INDEX ETF (continued)

volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Indonesia Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Indonesia Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Indonesia Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Indonesia Index, the Fund's return may deviate significantly from the return of the Indonesia Index. In addition, the Fund may not be able to invest in certain securities included in the Indonesia Index, due to legal restrictions or limitations imposed by the government of Indonesia or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Indonesia Index is based on securities' closing price on local foreign markets (*i.e.*, the value of the Indonesia Index is not based on fair value prices), the Fund's ability to track the Indonesia Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Indonesia Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a

smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single security may have a greater impact on the Fund's NAV and may make the Fund more volatile than diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Indonesia Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Indonesia Index, the Fund's assets are concentrated in the financial services sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns

assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 18.45% 3Q 10

Worst Quarter: -14.49% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (1/15/2009)
Market Vectors Indonesia Index ETF (return before taxes)	2.31 %	38.31 %
Market Vectors Indonesia Index ETF (return after taxes on distributions)	1.69 %	37.75 %

MARKET VECTORS INDONESIA SMALL-CAP ETF

INVESTMENT OBJECTIVE

Market Vectors Indonesia Small-Cap ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Indonesia Small-Cap Index (the Indonesia Small-Cap Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses ^(a)	2.21 %
Total Annual Fund Operating Expenses ^(b)	2.71 %
Fee Waivers and Expense Reimbursement ^(b)	2.10 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.61 %

(a) Other Expenses are based on estimated amounts for the current fiscal year.

(b) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of

the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.61% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 62

3	\$	641
5	\$	1,247
10	\$	2,887

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the period March 20, 2012 (the Fund's commencement of operations) through December 31, 2012, the Fund's portfolio turnover was 51% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Indonesia Small-Cap Index is comprised of securities of Indonesian small-capitalization companies. A company is considered to be an Indonesian company if it is incorporated in Indonesia or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Indonesia. As of December 31, 2012, the Indonesia Small-Cap Index included 24 securities of companies with a market capitalization range of between approximately \$101 million and \$1.16 billion and a weighted average market capitalization of \$542 million. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Indonesia Small-Cap Index concentrates in an industry or group of industries. As of December 31, 2012, the Fund was concentrated in the financial services and industrials sectors and each of the energy and consumer staples sectors represented a significant portion of the Indonesia Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Indonesian Issuers. Investment in securities of Indonesian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, currency devaluations, high rates of inflation, corruption, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, acts of terrorism, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. In addition, the Indonesian economy is dependent upon trade with other nations, including China, Japan, Singapore and the United States. Indonesia has experienced acts of terrorism that have targeted foreigners. Such acts of terrorism have had a negative impact on tourism, an important sector of the Indonesia economy.

The securities markets of Indonesia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Indonesia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The Indonesian government may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Indonesia. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Indonesia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors, and governmental restrictions may limit the amount of investments by foreign investors in a particular industry and/or issuer, limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Indonesia and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Indonesia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Indonesian Rupiah may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Indonesian issuers, and the income received by the Fund will be principally in Indonesian Rupiah. The Fund's exposure to the Indonesian Rupiah and changes in value of the Indonesian Rupiah versus the U.S. dollar may result in reduced returns to the Fund. Moreover, the Fund may incur costs in connection

with conversions between U.S. dollars and the Indonesian Rupiah.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In

MARKET VECTORS INDONESIA SMALL-CAP ETF (continued)

addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in the Financial Services Sector. The financial services sector includes engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Indonesia Small-Cap Index is concentrated in the financial services sector, the Fund may be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the Indonesia Small-Cap Index is concentrated in the industrials sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the energy sector represents a significant portion of the Indonesia Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risks of Investing in the Consumer Staples Sector. The consumer staples sector includes, among others, manufacturers and distributors of food, beverages and tobacco, food and drug retailers and products of non-durable household goods and consumer products. Because as currently constituted the consumer staples sector represents a significant portion of the Indonesia Small-Cap Index, the Fund will be sensitive to changes in, and its performance

may depend to a greater extent on, the overall condition of the consumer staples sector. These companies may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending.

Risk of Investing in Small-Capitalization Companies. Small-capitalization companies may be more volatile and more likely than large- and medium-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of these companies could trail the returns on investments in securities of large- and medium- capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Indonesia Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Indonesia Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Indonesia Small-Cap Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Indonesia Small-Cap Index, the Fund's return may deviate significantly from the return of the Indonesia Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the Indonesia Small-Cap Index, or invest in them in the exact proportions in which they are represented in the Indonesia Small-Cap Index, due to legal restrictions or limitations imposed by the government of Indonesia or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the is not based on fair value prices), the Fund's ability to track the Indonesia Small-Cap Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Indonesia Small-Cap Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Indonesia Small-Cap Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Indonesia Small-Cap Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Indonesia Small-Cap Index, the Fund's assets are concentrated in the financial services and industrials sectors and that the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on those sectors will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The Fund commenced operations on March 30, 2012 and therefore does not have a performance history for a full calendar year. Visit www.marketvectorsetfs.com for current performance figures.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	March 2012
George Cao	Portfolio Manager	March 2012

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

MARKET VECTORS LATIN AMERICA SMALL-CAP INDEX ETF**INVESTMENT OBJECTIVE**

Market Vectors Latin America Small-Cap Index ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Latin America Small-Cap Index (the LatAm Small-Cap Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	1.14 %
Total Annual Fund Operating Expenses ^(a)	1.64 %
Fee Waivers and Expense Reimbursement ^(a)	1.01 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.63 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs,

trading expenses, taxes and extraordinary expenses) from exceeding 0.63% of the Fund's average daily net assets per year until May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 64
3	\$ 418
5	\$ 796
10	\$ 1,859

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in

higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 39% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund will normally invest at least 80% of its total assets in securities that comprise the Fund's benchmark index. The LatAm Small-Cap Index is comprised of securities of Latin American small-capitalization companies. A company is considered to be a Latin American company if it is incorporated in Latin America or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Latin America. The Latin America region covers the following countries: Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Puerto Rico, Uruguay and Venezuela. As of December 31, 2012, the LatAm Small-Cap Index included 144 securities of companies with a market capitalization range of between approximately \$107 million and

MARKET VECTORS LATIN AMERICA SMALL-CAP INDEX ETF (continued)

\$4.4 billion and a weighted average market capitalization of \$1.2 billion. This 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, will attempt to approximate the investment performance of the LatAm Small-Cap Index by investing in a portfolio of securities that generally replicates the LatAm Small-Cap Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the LatAm Small-Cap Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the LatAm Small-Cap Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the LatAm Small-Cap Index concentrates in such industry or group of industries. As of December 31, 2012, each of the basic materials, consumer discretionary, financial services and industrials sectors represented a significant portion of the LatAm Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Latin America. Investments in securities of Latin American issuers involve special considerations not typically associated with investments in securities of issuers located in the United States. The economies of certain Latin American countries have, at times, experienced high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates. In addition, commodities (such as oil, gas and minerals) represent a significant percentage of the region's exports and many economies in this region are particularly sensitive to fluctuations in commodity prices. Adverse economic events in one country may have a significant adverse effect on other countries of this region.

Most Latin American countries have experienced, at one time or another, severe and persistent levels of inflation, including, in some cases, hyperinflation. This has, in turn, led to high interest rates, extreme measures by governments to keep inflation in check, and a generally debilitating effect on economic growth. Although inflation in many Latin American countries has lessened, there is no guarantee it will remain at lower levels.

The political history of certain Latin American countries has been characterized by political uncertainty, intervention by the military in civilian and economic spheres, and political corruption. Such events could reverse favorable trends toward market and economic reform, privatization, and removal of trade barriers, and could result in significant disruption in securities markets in the region.

The economies of Latin American countries are generally considered emerging markets and can be significantly affected by currency devaluations. Certain Latin American countries may also have managed currencies which are maintained at artificial levels relative to the U.S. dollar rather than at levels determined by the market. This type of system can lead to sudden and large adjustments in the currency which, in turn, can have a disruptive and negative effect on foreign investors. Certain Latin American countries also restrict the free conversion of their currency into foreign currencies, including the U.S. dollar. There is no significant foreign exchange market for many Latin American currencies and it would, as a result, be difficult for the Fund to engage in foreign currency transactions

designed to protect the value of the Fund's interests in securities denominated in such currencies.

Finally, a number of Latin American countries are among the largest debtors of developing countries. There have been moratoria on, and a rescheduling of, repayment with respect to these debts. Such events can restrict the flexibility of these debtor nations in the international markets and result in the imposition of onerous conditions on their economies.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the LatAm Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Discretionary Sector. The consumer discretionary sector includes, among others, automotive, household durable goods and apparel manufacturers and companies that provide retail, lodging, leisure or food and beverage services. Because as currently constituted the consumer discretionary sector represents a significant portion of the LatAm Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the financial services sector represents a significant portion of the LatAm Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the LatAm Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in Small-Capitalization Companies. Small-capitalization companies may be more volatile and more likely than large- and medium-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small-capitalization companies could trail the returns on investments in securities of large- and medium-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

MARKET VECTORS LATIN AMERICA SMALL-CAP INDEX ETF (continued)

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the LatAm Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the LatAm Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the LatAm Small-Cap Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the LatAm Small-Cap Index, the Fund's return may deviate significantly from the return of the LatAm Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the LatAm Small-Cap Index, or invest in them in the exact proportions they represent of the LatAm Small-Cap Index, due to legal and regulatory rules and limitations imposed by certain Latin American countries or a lack of liquidity on the stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the LatAm Small-Cap Index is based on the securities' closing price on local foreign markets (*i.e.*, the value of the LatAm Small-Cap Index is not based on fair value prices), the Fund's ability to track the LatAm Small-Cap Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the LatAm Small-Cap Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company represented in the LatAm Small-Cap Index. As a result, the gains and losses on a single security may have a greater impact on the Fund's NAV and may make the Fund more volatile than diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the LatAm Small-Cap Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Fund's investments are concentrated in a particular sector or industry, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector or industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Best Quarter: 17.32% 1Q 12

Worst Quarter: -27.84% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (4/6/2010)
Market Vectors Latin America Small-Cap Index ETF (return before taxes)	18.34%	2.91%
Market Vectors Latin America Small-Cap Index ETF (return after taxes on distributions)	16.59%	1.80%
Market Vectors Latin America Small-Cap Index ETF (return after taxes on distributions and sale of Fund Shares)	11.92%	1.83%
Market Vectors Latin America Small-Cap Index (reflects no deduction for fees, expenses or taxes)	19.19%	3.57%
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	16.00%	9.17%

PORTFOLIO MANAGEMENT

MARKET VECTORS POLAND ETF

INVESTMENT OBJECTIVE

Market Vectors Poland ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Poland Index (the Poland Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.53 %
Total Annual Fund Operating Expenses ^(a)	1.03 %
Fee Waivers and Expense Reimbursement ^(a)	0.42 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.61 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.60% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 62
3	\$ 286
5	\$ 528
10	\$ 1,221

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 20% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Poland Index is comprised of securities of Polish companies. A company is considered to be a Polish company if it is incorporated in Poland or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Poland. Such companies may include medium-capitalization companies. As of December 31, 2012, the Poland Index included 28 securities of companies with a market capitalization range of between approximately \$107 million and \$14.9 billion and a weighted average market capitalization of \$7.3 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Poland Index by investing in a portfolio of securities that generally replicates the Poland Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Poland Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund will normally invest at least 80% of its assets in securities that comprise the Poland Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Poland Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Poland Index concentrates in an industry or group of industries. As of December 31, 2012, the Poland Index was concentrated in the financial services sector and each of the basic materials, energy and utilities sectors represented a significant portion of the Poland Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Polish Issuers. Investment in securities of Polish issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Furthermore, events and evolving conditions in certain European countries have greatly increased market volatility due to concerns about high levels of government debt, credit rating downgrades of sovereign debt and uncertainty about the future use of the Euro as a common currency. Responses to the financial problems by European governments, central banks and other bodies, including austerity measures and reforms may not work, may result in social unrest and may limit future economic growth or have other uncertain or unintended consequences. These events have adversely affected the exchange rate of the Euro and may continue to significantly affect every country in Europe. One or more countries may abandon the Euro and/or withdraw from the EU, which could have significant and far-reaching consequences. In addition, the Polish economy, along with certain other EU nations, experienced a significant slowdown during the recent financial crisis. Poland's economy is dependent upon the export of raw materials and consumer goods. Poland is dependent on trading relationships with certain key trading partners, including Germany and other European Union nations and as a result may be affected if demand for Poland's exports in those nations declines.

The securities markets in Poland are underdeveloped and are less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Poland are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Poland may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Poland. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Poland. Moreover, Poland may require governmental

approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Poland and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Poland significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Polish Zloty may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Polish issuers and the income received by the Fund will be principally in Polish Zloty. The Fund's exposure to the Polish Zloty and changes in value of the Polish Zloty versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Polish Zloty.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become

MARKET VECTORS POLAND ETF (continued)

volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Poland Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Poland Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the energy sector represents a significant portion of the Poland Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility

services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Utilities Sector. The utilities sector includes companies that produce or distribute electricity, gas or water. Because as currently constituted the utilities sector represents a significant portion of the Poland Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the utilities sector. Companies in the utilities sector may be adversely affected by changes in exchange rates, domestic and international competition, difficulty in raising adequate amounts of capital and governmental limitation on rates charged to customers.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating

to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Poland Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Poland Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Poland Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Poland Index, the Fund's return may deviate significantly from the return of the Poland Index. In addition, the Fund may not be able to invest in certain securities included in the Poland Index, the Fund may not be able to invest in certain securities included in the Poland Index, due to legal restrictions or limitations imposed by the government of Poland or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Poland Index is based on securities' closing price on local foreign markets (*i.e.*, the value of the Poland Index is not based on fair value prices), the Fund's ability to track the Poland Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Poland Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Poland Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Poland Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Poland Index, the Fund's assets are concentrated in the financial

services sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectoretfs.com.

MARKET VECTORS POLAND ETF (continued)**Annual Total Returns Calendar Years**

Best Quarter: 31.98% 3Q 10

Worst Quarter: -35.24% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (11/24/2009)
Market Vectors Poland ETF (return before taxes)	33.82 %	-0.56 %
Market Vectors Poland ETF (return after taxes on distributions)	32.15 %	-1.53 %
Market Vectors Poland ETF (return after taxes on distributions and sale of Fund Shares)	21.89 %	-1.05 %

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	November 2009
George Cao	Portfolio Manager	November 2009

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

INVESTMENT OBJECTIVE

Market Vectors Russia ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Russia Index (the Russia Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.13 %
Total Annual Fund Operating Expenses ^(a)	0.63 %
Fee Waivers and Expense Reimbursement ^(a)	0.01 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.62 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.62% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 63
3	\$ 201
5	\$ 350
10	\$ 785

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 41% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Russia Index is comprised of securities of Russian companies. A company is considered to be a Russian company if it is incorporated in Russia or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Russia. Such companies may include medium-capitalization companies. As of December 31, 2012, the Russia Index included 45 securities of companies with a market capitalization range of between approximately \$1.1 billion and \$112.0 billion and a weighted average market capitalization of \$36.1 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

MARKET VECTORS RUSSIA ETF (continued)

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Russia Index by investing in a portfolio of securities that generally replicates the Russia Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Russia Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Russia Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Russia Index concentrates in an industry or group of industries. As of December 31, 2012, the Russia Index was concentrated in the energy sector and each of the basic materials, financial services and telecommunications sectors represented a significant portion of the Russia Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Russian Issuers. Investment in securities of Russian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets of Russia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Russia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Russia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Russia. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Russia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Russia and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Russia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

Additionally, because Russia produces and exports large volumes of oil and gas, the Russian economy is particularly sensitive to the price of oil and gas on the world market, and a decline in the price of oil and gas could have a significant negative impact on the Russian economy.

The value of the Russian Ruble may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Russian issuers and the income received by the Fund will be principally in Russian Rubles. The Fund's exposure to the Russian Ruble and changes in value of the Russian Ruble versus the U.S. dollar may result in reduced returns to the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Russian Ruble. In addition, the current economic turmoil in Russia and the effects on the current global economic crisis on the Russian economy may have significant adverse effects on the Russian Ruble and on the values of the Fund's investments.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material

information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Russia Index, may negatively affect the Fund's ability to replicate the performance of the Russia Index.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the Russia Index is concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Russia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Telecommunications Sector. The telecommunications sector includes companies that provide telecommunications services. Because as currently constituted the telecommunications sector represents a significant portion of the Russia Index, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the financial services sector represents a significant portion of the Russia Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government

regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of these companies could trail the returns on investments in securities of large-capitalization companies.

MARKET VECTORS RUSSIA ETF (continued)

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Russia Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Russia Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Russia Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Index, the Fund's return may deviate significantly from the return of the Index. In addition, the Fund may not be able to invest in certain securities included in the Russia Index, or invest in them in the exact proportions they represent of the Russia Index, due to legal restrictions or limitations imposed by the government of Russia or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Russia Index is based on securities' closing price on local foreign markets (*i.e.*, the value of the Russia Index is not based on fair value prices), the Fund's ability to track the Russia Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Russia Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Russia Index, the Fund's assets are concentrated in the energy sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors

or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year, five years and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

62

Annual Total Returns Calendar Years

Best Quarter 47.95% 2Q 09

Worst Quarter -52.99% 4Q 08

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Prior to March 19, 2012, the Fund sought to replicate an index called the DAXglobal[®] Russia+ Index.

	Past One Year	Past Five Years	Since Inception (4/24/2007)
Market Vectors Russia ETF (return before taxes)	15.35 %	-9.27 %	-3.40 %
Market Vectors Russia ETF (return after taxes on distributions)	14.38 %	-9.78 %	-3.89 %
Market Vectors Russia ETF (return after taxes on distributions and sale of Fund Shares)	9.97 %	-7.92 %	-3.15 %
Market Vectors Russia Index (reflects no deduction for fees, expenses or taxes)	10.53 %	-10.33 %	-4.34 %
S&P 500 [®] Index (reflects no deduction for fees, expenses or taxes)	16.00 %	1.66 %	1.55 %

George Cao	Portfolio Manager	December 2007

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

MARKET VECTORS RUSSIA SMALL-CAP ETF

INVESTMENT OBJECTIVE

Market Vectors Russia Small-Cap ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Russia Small-Cap Index (the Russia Small-Cap Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses ^(a)	1.71 %
Total Annual Fund Operating Expenses ^(b)	2.21 %
Fee Waivers and Expense Reimbursement ^(b)	1.50 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.71 %

(a) Other Expenses are based on estimated amounts for the current fiscal year.

(b) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund

(excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.67% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 73
3	\$ 546

5	\$	1,047
10	\$	2,426

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 67% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Russia Small-Cap Index is comprised of securities of Russian small-capitalization companies. A company is considered to be a Russian company if it is incorporated in Russia or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Russia. The Fund will normally invest at least 80% of its total assets in securities of small-capitalization Russian companies. As of December 31, 2012, the Russia Small-Cap Index included 27 securities of companies with a market capitalization range of between approximately \$159 million and \$16.1 billion and a weighted average market capitalization of \$2.6 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Russia Small-Cap Index by investing in a portfolio of securities that generally replicates the Russia Small-Cap Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Russia Small-Cap Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Russia Small-Cap Index concentrates in an industry or group of industries. As of December 31, 2012, each of the energy, basic materials, financial services and industrials sectors represented a significant portion of the Russia Small-Cap Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Russian Issuers. Investment in securities of Russian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets of Russia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Russia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Russia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Russia. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Russia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Russia and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Russia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

Additionally, because Russia produces and exports large volumes of oil and gas, the Russian economy is particularly sensitive to the price of oil and gas on the world market, and a decline in the price of oil and gas could have a significant negative impact on the Russian economy.

The value of the Russian Ruble may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Russian issuers and the income received by the Fund will be principally in Russian Rubles. The Fund's exposure to the Russian Ruble and changes in value of the Russian Ruble versus the U.S. dollar may result in reduced returns to the Fund. Moreover, the Fund may incur costs in connection with conversions

between U.S. dollars and the Russian Ruble. In addition, the current economic turmoil in Russia and the effects on the current global economic crisis on the Russian economy may have significant adverse effects on the Russian Ruble.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

MARKET VECTORS RUSSIA SMALL-CAP ETF (continued)

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Russia Small-Cap Index, may negatively affect the Fund's ability to replicate the performance of the Russia Small-Cap Index.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the energy sector represents a significant portion of the Russia Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Russia Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the financial services sector represents a significant portion of the Russia Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the Russia Small-Cap Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in Small-Capitalization Companies. Small-capitalization companies may be more volatile and more likely than large- and medium-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of these companies could trail the returns on investments in securities of large- and medium-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Russia Small-Cap Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Russia Small-Cap Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Russia Small-Cap Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Russia Small-Cap Index, the Fund's return may deviate significantly from the return of the Russia Small-Cap Index. In addition, the Fund may not be able to invest in certain securities included in the Russia Small-Cap Index, or invest in them in the exact proportions they represent of the Russia Small-Cap Index, due to legal restrictions or limitations imposed by the government of Russia or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Russia Small-Cap Index is based on securities closing price on local foreign markets (*i.e.*, the value of the Russia Small-Cap Index is not based on fair value prices), the Fund's ability to track the Russia Small-Cap Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Russia Small-Cap Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Russia Small-Cap Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Russia Small-Cap Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Fund's investments are concentrated in a particular sector or industry, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector or industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the last calendar year. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

MARKET VECTORS RUSSIA SMALL-CAP ETF (continued)**Annual Total Returns Calendar Years**

Best Quarter: 11.60% 1Q 12

Worst Quarter: -20.06% 2Q 12

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (4/13/2011)
Market Vectors Russia Small-Cap ETF (return before taxes)	-3.17 %	-24.43 %

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information About Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

INVESTMENT OBJECTIVE

Market Vectors Vietnam ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Vietnam Index (the Vietnam Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.26 %
Total Annual Fund Operating Expenses ^(a)	0.76 %
Fee Waivers and Expense Reimbursement ^(a)	0.00 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.76 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.76% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 78
3	\$ 243
5	\$ 422
10	\$ 942

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 54% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Vietnam Index is comprised of securities of Vietnamese companies. A company is considered to be a Vietnamese company if it is incorporated in Vietnam or generates at least 50% of its revenues (or, in certain circumstances, has at least 50% of its assets) in Vietnam. In addition, the Fund may invest in securities of companies that (i) are expected to generate at least 50% of their revenues in Vietnam or (ii) demonstrate a significant and/or dominant position in the Vietnamese market and are expected to grow. Such companies may include micro-, small-and medium-capitalization companies. As of December 31, 2012, the Vietnam Index included 25 securities of companies with a market capitalization range of between approximately \$95 million and \$41.7

MARKET VECTORS VIETNAM ETF (continued)

billion and a weighted average market capitalization of \$3.3 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Vietnam Index by investing in a portfolio of securities that generally replicates the Vietnam Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Vietnam Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund will normally invest at least 80% of its assets in securities that comprise the Vietnam Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Vietnam Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Vietnam Index concentrates in an industry or group of industries. As of December 31, 2012, the Vietnam Index was concentrated in the financial services sector and each of the energy and industrials sectors represented a significant portion of the Vietnam Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Special Risk Considerations of Investing in Vietnamese Issuers. Investment in securities of Vietnamese issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets in Vietnam are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Vietnam are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

Current regulations in Vietnam require the Fund to execute trades of securities of Vietnamese companies through a single broker. As a result, the Adviser will have less flexibility to choose among brokers on behalf of the Fund than is typically the case for investment managers. In addition, because the process of purchasing securities in Vietnam requires that payment to the local broker occur prior to receipt of securities, failure of the broker to deliver the securities will adversely affect the Fund.

The government in Vietnam may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Vietnam. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Vietnam. Moreover, Vietnam may require

governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Vietnam and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Vietnam significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Vietnam Dong may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Vietnamese issuers and the income received by the Fund will be principally in Vietnam Dong. The Fund's exposure to the Vietnam Dong and changes in value of the Vietnam Dong versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Vietnam Dong.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of

economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Frontier Market Issuers. Vietnam is considered to be a frontier market. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in frontier market countries are magnified. Investments in securities of frontier market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Issuers Located Outside of Vietnam. It is currently anticipated that approximately 26% of the Vietnam Index will consist of securities of issuers located outside of Vietnam that have exposure to the Vietnamese market. Because securities of issuers located outside of Vietnam may not move in tandem with changes in the Vietnamese securities market, the Fund's portfolio may not be as closely linked to the Vietnamese market as a fund that invests solely in issuers that are located in Vietnam or in issuers that actually derive a substantial portion of their revenues from Vietnam.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Vietnam Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the energy sector represents a significant portion of the Vietnam Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the Vietnam Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium- capitalization companies could trail the returns on investments in securities of large-capitalization companies.

MARKET VECTORS VIETNAM ETF (continued)

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Vietnam Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Vietnam Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Vietnam Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Vietnam Index, the Fund's return may deviate significantly from the return of the Vietnam Index. In addition, the Fund may not be able to invest in certain securities included in the Vietnam Index, the Fund may not be able to invest in certain securities included in the Vietnam Index, due to legal restrictions or limitations imposed by the government of Vietnam or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Vietnam Index is based on securities' closing price on local foreign markets (*i.e.*, the value of the Vietnam Index is not based on fair value prices), the Fund's ability to track the Vietnam Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Vietnam Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares

at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Vietnam Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Vietnam Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Vietnam Index, the Fund's assets are concentrated in the financial services sector and that the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 29.34% 1Q 12

Worst Quarter: -16.96% 4Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (8/11/2009)
Market Vectors Vietnam ETF (return before taxes)	18.07 %	-9.45 %
Market Vectors Vietnam ETF (return after taxes on distributions)	17.20 %	-9.89 %
Market Vectors Vietnam ETF (return after taxes on distributions and sale of Fund Shares)	11.74 %	-8.11 %
Market Vectors Vietnam Index (reflects no deduction for fees, expenses or taxes)	18.33 %	-9.21 %
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	16.00 %	13.61 %

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	August 2009
George Cao	Portfolio Manager	August 2009

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 74 of this Prospectus.

SUMMARY INFORMATION ABOUT PURCHASES AND SALES OF FUND SHARES AND TAXES

PURCHASE AND SALE OF FUND SHARES

The Funds issue and redeem Shares at NAV only in a large specified number of Shares each called a Creation Unit, or multiples thereof. A Creation Unit consists of 50,000 Shares.

Individual Shares of a Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Funds are listed on NYSE Arca, Inc. (NYSE Arca) and because Shares trade at market prices rather than NAV, Shares of the Funds may trade at a price greater than or less than NAV.

TAX INFORMATION

Each Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS

PRINCIPAL INVESTMENT STRATEGIES

The Adviser anticipates that, generally, each Fund will hold all of the securities that comprise its Index in proportion to their weightings in such Index. However, under various circumstances, it may not be possible or practicable to purchase all of those securities in those weightings. In these circumstances, a Fund may purchase a sample of securities in its Index. There also may be instances in which the Adviser may choose to underweight or overweight a security in a Fund's Index, purchase securities not in the Fund's Index that the Adviser believes are appropriate to substitute for certain securities in such Index or utilize various combinations of other available investment techniques in seeking to replicate as closely as possible, before fees and expenses, the price and yield performance of the Fund's Index. Each Fund may sell securities that are represented in its Index in anticipation of their removal from such Index or purchase securities not represented in its Index in anticipation of their addition to such Index. Each Fund may also, in order to comply with the tax diversification requirements of the Internal Revenue Code of 1986, as amended (Internal Revenue Code), temporarily invest in securities not included in its Index that are expected to be highly correlated with the securities included in its Index.

ADDITIONAL INVESTMENT STRATEGIES

Each Fund may invest in securities not included in their respective Index, money market instruments, including repurchase agreements or other funds which invest exclusively in money market instruments, convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and certain derivatives. Convertible securities and depositary receipts not included in a Fund's Index may be used by the Fund in seeking performance that corresponds to its respective Index and in managing cash flows, and may count towards compliance with a Fund's 80% policy. The Funds will not invest in money market instruments as part of a temporary defensive strategy to protect against potential stock market declines. Each Fund may also invest, to the extent permitted by the 1940 Act, in other affiliated and unaffiliated funds, such as open-end or closed-end management investment companies, including other ETFs.

An authorized participant (*i.e.*, a person eligible to place orders with the Distributor (defined below) to create or redeem Creation Units of a Fund) that is not a qualified institutional buyer, as such term is defined under Rule 144A of the Securities Act of 1933, as amended (the Securities Act), will not be able to receive, as part of a redemption, restricted securities eligible for resale under Rule 144A.

BORROWING MONEY

Each Fund may borrow money from a bank up to a limit of one-third of the market value of its assets. To the extent that a Fund borrows money, it will be leveraged; at such times, the Fund will appreciate or depreciate in value more rapidly than its benchmark Index.

FUNDAMENTAL AND NON-FUNDAMENTAL POLICIES

Each Fund's investment objective and each of its other investment policies are non-fundamental policies that may be changed by the Board of Trustees without shareholder approval, except as noted in this Prospectus or the Statement of Additional Information (SAI) under the section entitled Investment Policies and Restrictions Investment Restrictions.

LENDING PORTFOLIO SECURITIES

Each Fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, a Fund receives liquid

collateral equal to at least 102% of the value of the portfolio securities being loaned. This collateral is marked-to-market on a daily basis. Although a Fund will receive collateral in connection with all loans of its securities holdings, the Fund would be exposed to a risk of loss should a borrower fail to return the borrowed securities (*e.g.*, the Fund would have to buy replacement securities and the loaned securities may have appreciated beyond the value of the collateral held by the Fund) or become insolvent. A Fund may pay fees to the party arranging the loan of securities. In addition, a Fund will bear the risk of loss of any cash collateral that it invests.

RISKS OF INVESTING IN THE FUNDS

The following section provides additional information regarding the principal risks identified under Principal Risks of Investing in the Fund in each Fund's Summary Information section followed by additional risk information. The risks listed below are applicable to each Fund unless otherwise noted.

Investors in the Funds should be willing to accept a high degree of volatility in the price of the Funds' Shares and the possibility of significant losses. An investment in the Funds involves a substantial degree of risk. An investment in the Funds is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Funds.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

Special Risk Considerations of Investing in African Issuers. (Market Vectors Africa Index ETF only.) Investment in securities of companies domiciled in Africa, primarily listed on an exchange in Africa or that generate at least 50% of their revenues in Africa involves risks not typically associated with investments in securities of issuers in more developed countries or geographic regions that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets in Africa are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries or geographic regions. As a result, securities markets in Africa are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. There may also be a high concentration of trading volume in a small number of issuers representing a limited number of sectors or industries. Moreover, trading on securities markets may be suspended altogether.

Certain governments in Africa may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in those countries. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in countries in Africa. Moreover, certain countries in Africa may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of those countries and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in countries in Africa significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of certain African currencies may be subject to a high degree of fluctuation and the income received by the Fund will be principally in African currencies. The Fund's exposure to certain African currencies and changes in value of such African currencies versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the particular African currency.

Special Risk Considerations of Investing in Brazilian Issuers. (Market Vectors Brazil Small-Cap ETF only.) The Brazilian government has exercised, and continues to exercise, significant influence over the Brazilian economy. The Brazilian economy has been characterized by frequent, and occasionally drastic, interventions by the Brazilian government, including the imposition of wage and price controls, exchange controls, limiting imports and other measures. The Brazilian government has often changed monetary, taxation, credit, trade and other policies to influence the core of Brazil's economy. Actions taken by the Brazilian government concerning the economy may have significant effects on Brazilian companies and on market conditions and prices of Brazilian securities.

The market for Brazilian securities is directly influenced by the flow of international capital, and economic and market conditions of certain countries, especially emerging market countries. As a result, adverse economic conditions or developments in other emerging market countries have at times significantly affected the availability of credit in the Brazilian economy and resulted in considerable outflows of funds and declines in the amount of foreign currency invested in Brazil.

Investments in Brazilian securities may be subject to certain restrictions on foreign investment. Brazilian law provides that whenever a serious imbalance in Brazil's balance of payments exists or is anticipated, the Brazilian government may impose temporary restrictions on the remittance to foreign investors of the proceeds of their investment in Brazil and on the conversion of the Brazilian Real into foreign currency.

Brazil has historically experienced high rates of inflation and a high level of debt, each of which may constrain economic growth. Despite rapid development in recent years, Brazil still suffers from high levels of corruption, crime and income disparity. Unanticipated political or social developments may result in sudden and significant investment losses. An increase in prices for commodities, such as petroleum, the depreciation of the Brazilian Real and future governmental measures seeking to maintain the value of the Brazilian Real in relation to the U.S. dollar, may trigger increases in inflation in Brazil and may slow the rate of growth of the Brazilian economy. Conversely, appreciation of the Brazilian Real relative to the U.S. dollar may lead to the deterioration of Brazil's current account and balance of payments as well as limit the growth of exports.

Because the Fund's assets will be invested primarily in equity securities of Brazilian issuers and the income received by the Fund will be principally in Brazilian Real. The Fund's exposure to the Brazilian Real and changes in value of the Brazilian Real versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and Brazilian Real.

Special Risk Considerations of Investing in Colombian Issuers. (Market Vectors Colombia ETF only.) The agriculture and mining sectors of the Colombian economy accounts for a substantial portion of its exports. Any changes in these sectors or fluctuations in the commodity markets could have an adverse impact on Colombia's economy and companies located in Colombia. Commodity prices may be influenced or characterized by unpredictable factors, including, where applicable, high volatility, changes in supply and demand relationships, weather, agriculture, trade, pestilence, changes in interest rates and monetary and other governmental policies, action and inaction.

The Colombian economy is dependent on the financial health of companies in the energy sector. The energy sector is cyclical and highly dependent on commodities prices. The market values of companies in the energy sector are strongly affected by the levels and volatility of global energy prices, energy supply and demand, capital expenditures on exploration and production, energy conservation efforts, exchange rates and technological advances. Companies in this sector are subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these companies' earnings. As a result, governmental budget constraints may have a material adverse effect on the stock prices of companies in this industry. Energy companies also face a significant risk of civil liability from accidents resulting in injury or loss of life or property, pollution or other environmental mishaps, equipment malfunctions or mishandling of materials and a risk of loss from terrorism and natural disasters.

Colombia is located in a part of the world that has historically been prone to natural disasters such as earthquakes, volcanoes, droughts, floods and tsunamis. In addition, emerging markets are especially economically sensitive to environmental events.

The Colombian economy and companies located in Colombia are dependent on commodity prices and the economies of other Central and South American countries, Europe, Asia, particularly China, and the United States, which are key trading partners. Reduction in spending on products and services offered by companies located in Colombia by any of these trading partners or a downturn in any of these economies could adversely affect Colombia's economy and the value of your investment in the Fund.

Colombia has historically experienced strained international relations due to territorial disputes, historical animosities or other defense concerns. These situations may cause uncertainty in Colombia's market and may adversely affect the performance of Colombia's economy.

The Colombian economy is subject to political, social, economic and regulatory risks which could adversely affect investments in the Fund. Colombia has experienced periods of political instability and social unrest in the past, and unemployment remains a problem. There may be a risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. Colombia has experienced economic instability resulting from periods of high inflation and currency devaluations. Heavy regulation of labor is pervasive in Colombia and may stifle economic growth.

Special Risk Considerations of Investing in Egyptian Issuers. (Market Vectors Egypt Index ETF only.) Investment in securities of Egyptian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, confiscatory taxation, regional conflict, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Issuers in Egypt are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable.

The securities markets in Egypt are underdeveloped and may be less correlated to global economic cycles than those markets located in more developed countries. Securities markets in Egypt are subject to greater risks associated with

market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether. Recently, the securities markets in Egypt were closed for an extended period of time due to political and civil unrest.

The government in Egypt may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Egypt. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Egypt. Moreover, Egypt may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Egypt and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Egypt significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

**ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)**

Emerging markets can experience high rates of inflation, deflation and currency devaluation. The value of the Egyptian pound may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Egyptian issuers and the income received by the Fund will be principally in Egyptian pounds. The Fund's exposure to the Egyptian pound and changes in value of the Egyptian pound versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Egyptian pound.

In Egypt, the marketability of quoted shares is limited due to the restricted opening hours of stock exchanges (normally 10:30 a.m. to 2:30 p.m., Sunday to Thursday), a narrow range of investors and a relatively high proportion of market value being concentrated in the hands of a relatively small number of shareholders. In addition, because Egyptian stock exchanges on which the Fund's portfolio securities may trade are open when the NYSE Arca is closed, the Fund may be subject to heightened risk associated with market movements.

Special Risk Considerations of Investing in German Issuers. (Market Vectors Germany Small-Cap ETF only.) Germany has an export dependent economy and therefore relies heavily on trade with key trading partners, including the United States and other countries in Europe. Exports account for more than one-third of Germany's output and are a key element in German economic expansion. Reduction in spending by European countries on German products and services or negative changes in any of these countries may cause an adverse impact on the German economy. Decreasing U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates or a recession in the United States may also have an adverse impact on the German economy.

The Economic and Monetary Union of the EU requires compliance with restrictions on inflation, deficits, interest rates, public debt and fiscal and monetary controls, each of which may significantly affect each country in Europe. Decreasing imports or exports, changes in governmental or EU regulations on trade, changes in the exchange rate of the Euro, the default or threat of default by an EU country on its sovereign debt, and recessions in an EU country may have a significant adverse effect on the economies of EU countries. The European financial markets have recently experienced volatility and adverse trends due to concerns about rising government debt levels of several European countries, including Greece, Spain, Ireland, Italy and Portugal. Responses to the financial problems by European governments, central banks and other bodies, including austerity measures and reforms may not work, may result in social unrest and may limit future economic growth or have other uncertain or unintended consequences. In addition, one or more countries may abandon the Euro and/or withdraw from the EU, which could have significant and far-reaching consequences. These events have adversely affected the exchange rate of the Euro and may continue to significantly affect other countries in Europe. The German economy, along with certain other EU nations, experienced a significant slowdown during the recent financial crisis.

Investing in German issuers involves political, social and regulatory risks. Certain sectors and regions of Germany have experienced high unemployment and social unrest. These issues may have an adverse affect on the German economy or the German industries or sectors in which the Fund invests. Heavy regulation of labor and product markets is pervasive in Germany. These regulations may stifle economic growth or result in extended recessionary periods.

Special Risk Considerations of Investing in GCC Issuers. (Market Vectors Gulf States Index ETF only.) Investment in securities of companies domiciled in countries belonging to the GCC, primarily listed on an exchange in countries belonging to the GCC or that generate at least 50% of their revenues in countries belonging to the GCC involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed

conflict, terrorist activities, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets in certain countries belonging to the GCC are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in certain countries belonging to the GCC are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

Certain economies in the GCC depend to a significant degree upon exports of primary commodities such as oil. A sustained decrease in commodity prices would have a significant negative impact on all aspects of the economy in certain countries belonging to the GCC. Certain GCC governments have exercised and continue to exercise substantial influence over many aspects of the private sector. In certain cases, the government owns or controls many companies. Accordingly, governmental actions in the future could have a significant effect on economic conditions in certain countries belonging to the GCC.

Certain governments in certain countries belonging to the GCC may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in those countries. These restrictions and/or controls may at

times limit or prevent foreign investment in securities of issuers located or operating in certain countries belonging to the GCC. Moreover, certain countries belonging to the GCC may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of those countries and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in certain countries belonging to the GCC significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the currencies of certain countries belonging to the GCC may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of companies domiciled in countries belonging to the GCC, primarily listed on an exchange in countries belonging to the GCC or that generate at least 50% of their revenues in countries belonging to the GCC and the income received by the Fund will be principally in currencies of such countries. The Fund's exposure to the currencies of certain countries belonging to the GCC and changes in value of such currencies versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the particular currency of such countries belonging to the GCC.

Special Risk Considerations of Investing in Indian Issuers. (Market Vectors India Small-Cap Index ETF only.) Investment in securities of Indian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, greater government control over the economy, including the risk that the Indian government may decide not to continue to support economic reform programs, political and legal uncertainty, currency fluctuations or blockage of foreign currency exchanges and the risk of nationalization or expropriation of assets. Issuers in India are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable. In addition, religious and border disputes persist in India. Moreover, India has experienced civil unrest and hostilities with neighboring countries, including Pakistan, and the Indian government has confronted separatist movements in several Indian states. In addition, India has experienced acts of terrorism that have targeted foreigners. Such acts of terrorism have had a negative impact on tourism, an important sector of the Indian economy. Additionally, each of the factors described below could have a negative impact on the Fund's performance and increase the volatility of the Fund.

Economic Risk. The Indian government has exercised and continues to exercise significant influence over many aspects of the economy, and the number of public sector enterprises in India is substantial. Accordingly, Indian government actions in the future could have a significant effect on the Indian economy. The Indian government has experienced chronic structural public sector deficits. High amounts of debt and public spending could have an adverse impact on India's economy. In recent years the Indian government has implemented several economic structural reforms which seek to achieve, among others, reduction in India's fiscal deficit, a decrease in, and control of, the rate of inflation, the liberalization of India's exchange and trade policies along with promoting a sound monetary policy, a reformation of the financial sector as well placing a greater reliance on market mechanism to direct economic activity. Despite recent downturns, the Indian economy has experienced generally sustained growth during the last several years. However, there are no guarantees this level of growth will continue. Additionally, the Indian economy is heavily dependent upon agriculture and thus the Fund's investments may be susceptible to adverse weather changes include the threat of monsoons and other natural disasters.

Investment and Repatriation Restrictions. The RBI, the Indian counterpart of the Federal Reserve Bank in the United States, imposes certain limits on the foreign ownership of Indian securities. In general, ownership by a foreign institutional investor (FII) is limited to 24% of the outstanding voting securities of an Indian issuer which limit can be further extended to the applicable foreign investment limit in a specific sector if the shareholders of a company pass a

special resolution to that effect. No single FII or its sub-accounts (provided such sub-account is broad based) can hold more than 10% of the total paid-up equity capital of an Indian company. Further, in the case of foreign corporates or individuals, each of such sub-account cannot invest more than 5% of the total paid-up equity capital of an Indian company. The Securities and Exchange Board of India (SEBI), the Indian counterpart of the SEC in the United States, monitors foreign holdings and periodically announces current foreign ownership limitations and changes to such limits. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in India and may inhibit the Fund's ability to track the India Small-Cap Index.

Regulatory Risk. The Adviser is a qualified foreign institutional investor (FII) with the SEBI, and the Subsidiary is registered as a sub-account with the SEBI in order to obtain the ability to make and dispose of investments. There can be no assurances that the Indian regulatory authorities will continue to grant such qualifications, and the loss of such qualifications could adversely impact the ability of the Fund to make investments in India.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

The Subsidiary's investments will be made in accordance with investment restrictions prescribed under the FII regulation. If new policy announcements or regulations in India are made, including, potentially policies with retroactive effect, which require changes in the structure or operations of the Fund, these may adversely impact the performance of the Fund.

Tax Risk. The Subsidiary is a wholly-owned subsidiary of the Trust in Mauritius and obtains benefits from favorable tax treatment by the Indian government pursuant to a taxation treaty between India and Mauritius. The Supreme Court of India has upheld the validity of this tax treaty in response to a challenge in a lower court contesting the treaty's applicability to entities such as the Fund; however, there can be no assurance that any future challenge will result in a favorable outcome. In recent years, there has been discussion in the Indian press that the treaty may be re-negotiated. There can be no assurance that the terms of the treaty will not be subject to re-negotiation in the future or subject to a different interpretation or that the Subsidiary will continue to be deemed a tax resident by Mauritius, allowing it favorable tax treatment. Any change in the provisions of this treaty or in its applicability to the Subsidiary could result in the imposition of withholding and other taxes on the Subsidiary by India, which would reduce the return to the Fund on its investments. The Fund intends to elect to pass-through to the Fund's shareholders as a deduction or credit the amount of foreign taxes paid by the Fund. The taxes passed through to shareholders are included in each shareholder's income. Certain shareholders, including some non-U.S. shareholders, are not entitled to the benefit of a deduction or credit with respect to foreign taxes paid by the Fund. Other foreign taxes, such as transfer taxes, may be imposed on the Fund, but would not give rise to a credit, or be eligible to be passed through to shareholders.

Proposed budget legislation in India (the 2012 Finance Bill) proposes to implement a general anti-avoidance provision (GAAR) expected to become effective in 2015. GAAR would be applicable where the main purpose of an arrangement is tax avoidance. GAAR provisions empower the tax authorities to declare any arrangement as an impermissible avoidance arrangement, provided the same has been entered into with the main objective of obtaining tax benefit under specified circumstances. If the Fund's use of the Subsidiary were considered to be such an impermissible avoidance arrangement, the Fund would become subject directly to taxation in India. The burden of proof in enforcing the rule will reside with the Indian government, not the taxpayer, and India's current double tax treaty arrangements will remain in force. If the Indian tax authorities were to apply the GAAR to the Subsidiary, this could result in the benefits under the tax treaty being denied to the Subsidiary, and consequently have an adverse impact on the taxability of the Subsidiary and the returns to the investors. In a recent case of a cross border acquisition transaction involving the transfer of shares of a non-resident company holding underlying shares in an Indian company to another non-resident company, the Indian Supreme Court held that the transfer of offshore assets ordinarily would not attract Indian tax liability. However, the 2012 Finance Bill in its current form includes a proposal to retrospectively overrule this decision and tax indirect transfers of Indian entities by non-residents, which would subject the Fund to tax on any gains it realizes on transactions in the shares of the Subsidiary between it and the Subsidiary and could have other adverse effects on the Fund. The 2012 Finance Bill introduced provisions that provide where shares of a non-Indian company derive their value substantially from assets in India, the transfer of such shares may, for the purposes of Indian tax rules, be deemed to amount to the transfer of capital assets situated in India. The amendments to the Income Tax Act, 1961 (ITA), set out in the 2012 Finance Bill, further provide that the term transfer includes a direct or an indirect disposal of an asset whether or not such transfer is dependent upon, or flows from, the transfer or redemption of shares of a non-Indian company. As a result, it is possible that Indian tax authorities may find a tax liability arising from the transfer of shares of the Subsidiary by the Fund on the basis that such shares derive their value substantially from assets in India. However, there are currently no rules or guidance relating to possible Indian tax liability and the circumstances in which the shares of a non-Indian company can be said to derive their value substantially from assets in India, although an expert committee set up by the Government of India recommended that the foregoing tax treatment of indirect transfers be mitigated in certain respects.

Further, the Government of India has recently issued a Direct Tax Code Bill for discussion purposes, which if enacted will replace the existing ITA. The provisions of the new Direct Tax Code, if enacted, could change the manner in which the Subsidiary or the portfolio companies are currently taxed in India, and could adversely impact the returns to the Market Vectors India Small-Cap Index ETF and its shareholders. Hence, no assurance can be given that the interpretations described in this discussion will remain in effect. Any changes could also be applied retroactively. Prospective investors are urged to consult their own tax advisors with respect to their own tax situations and the tax consequences of an investment in the Fund.

Limitations on the Subsidiary's Ability to Make Distributions or Pay Redemption Proceeds to the Fund. Under applicable laws in Mauritius, the Subsidiary can only make distributions if the value of its assets is greater than the sum of the value of its liabilities and its stated capital. In addition, the Subsidiary is subject to limitations under applicable laws in Mauritius on payments of redemption proceeds depending on its accumulated losses for accounting purposes. These limitations may

adversely affect the ability of the Subsidiary to make distributions or pay redemption proceeds to the Fund, which may negatively affect the Fund.

Special Risk Considerations of Investing in Indonesian Issuers. (Market Vectors Indonesia Index ETF and Market Vectors Indonesia Small-Cap ETF only.) Investment in securities of Indonesian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in each Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, currency devaluations, high rates of inflation, corruption, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, acts of terrorism, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. In addition, the Indonesian economy is dependent upon trade with other nations, including China, Japan, Singapore and the United States. Indonesia has experienced acts of terrorism that have targeted foreigners. Such acts of terrorism have had a negative impact on tourism, an important sector of the Indonesia economy.

The securities markets of Indonesia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Indonesia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Indonesia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Indonesia. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Indonesia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Indonesia and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Indonesia significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of each Fund's Shares.

The value of the Indonesian Rupiah may be subject to a high degree of fluctuation. Each Fund's assets will be invested primarily in equity securities of Indonesian issuers and the income received by the Fund will be principally in Indonesian Rupiah. Each Fund's exposure to the Indonesian Rupiah and changes in value of the Indonesian Rupiah versus the U.S. dollar may result in reduced returns for the Fund. Moreover, each Fund may incur costs in connection with conversions between U.S. dollars and the Indonesian Rupiah.

Special Risk Considerations of Investing in Latin America. (Market Vectors Latin America Small-Cap Index ETF only.) Investments in securities of Latin American issuers involve special considerations not typically associated with investments in securities of issuers located in the United States. The economies of certain Latin American countries have, at times, experienced high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates. In addition, commodities (such as oil, gas and minerals) represent a significant percentage of the region's exports and many economies in this region are particularly sensitive to fluctuations in commodity prices. Adverse economic events in one country may have a significant adverse effect on other countries of this region.

Most Latin American countries have experienced, at one time or another, severe and persistent levels of inflation, including, in some cases, hyperinflation. This has, in turn, led to high interest rates, extreme measures by governments to keep inflation in check, and a generally debilitating effect on economic growth. Although inflation in many Latin American countries has lessened, there is no guarantee it will remain at lower levels.

The political history of certain Latin American countries has been characterized by political uncertainty, intervention by the military in civilian and economic spheres, and political corruption. Such events could reverse favorable trends toward market and economic reform, privatization, and removal of trade barriers, and could result in significant disruption in securities markets in the region.

The economies of Latin American countries are generally considered emerging markets and can be significantly affected by currency devaluations. Certain Latin American countries may also have managed currencies which are maintained at artificial levels relative to the U.S. dollar rather than at levels determined by the market. This type of system can lead to sudden and large adjustments in the currency which, in turn, can have a disruptive and negative effect on foreign investors. Certain Latin American countries also restrict the free conversion of their currency into foreign currencies, including the U.S. dollar. There is no significant foreign exchange market for many Latin American currencies and it would, as a result, be difficult for the Fund to

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

engage in foreign currency transactions designed to protect the value of the Fund's interests in securities denominated in such currencies.

Finally, a number of Latin American countries are among the largest debtors of developing countries. There have been moratoria on, and a rescheduling of, repayment with respect to these debts. Such events can restrict the flexibility of these debtor nations in the international markets and result in the imposition of onerous conditions on their economies.

Special Risk Considerations of Investing in Polish Issuers. (Market Vectors Poland ETF only.) Investment in securities of Polish issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Furthermore, events and evolving conditions in certain European countries have greatly increased market volatility due to concerns about high levels of government debt, credit rating downgrades of sovereign debt and uncertainty about the future use of the Euro as a common currency. These events have adversely affected the exchange rate of the Euro and may continue to significantly affect every country in Europe. In addition, Poland's economy is dependent upon the export of raw materials and consumer goods. Poland is dependent on trading relationships with certain key trading partners, including Germany and other European Union nations and as a result may be affected if demand for Poland's exports in those nations declines.

The securities markets in Poland are underdeveloped and are less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Poland are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Poland may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Poland. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Poland. Moreover, Poland may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Poland and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Poland significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Polish Zloty may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Polish issuers and the income received by the Fund will be principally in Polish Zloty. The Fund's exposure to the Polish Zloty and changes in value of the Polish Zloty versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the Polish Zloty.

Special Risk Considerations of Investing in Russian Issuers. (Market Vectors Russia ETF and Market Vectors Russia Small-Cap ETF only.) Investment in securities of Russian issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in each Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including

authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets of Russia are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Russia are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

The government in Russia may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Russia. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Russia. Moreover, governmental approval or special licenses may be required prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Russia and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Russia significantly riskier than investing in issuers

located or operating in more developed countries, and any one of them could cause a decline in the value of each Fund's Shares.

Additionally, because Russia produces and exports large volumes of oil and gas, the Russian economy is particularly sensitive to the price of oil and gas on the world market, and a decline in the price of oil and gas could have a significant negative impact on the Russian economy.

The value of the Russian Ruble may be subject to a high degree of fluctuation. Each Fund's assets will be invested primarily in equity securities of Russian issuers and the income received by the Fund will be principally in Russian Rubles. Each Fund's exposure to the Russian Ruble and changes in value of the Russian Ruble versus the U.S. dollar may result in reduced returns to the Fund. Moreover, each Fund may incur costs in connection with conversions between U.S. dollars and the Russian Ruble. In addition, the current economic turmoil in Russia and the effects on the current global economic crisis on the Russian economy may have significant adverse effects on the Russian Ruble and on the values of each Fund's investments.

Special Risk Considerations of Investing in Vietnamese Issuers. (Market Vectors Vietnam ETF only.) Investment in securities of Vietnamese issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest.

The securities markets in Vietnam are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. As a result, securities markets in Vietnam are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. Moreover, trading on securities markets may be suspended altogether.

Current regulations in Vietnam require the Fund to execute trades of securities of Vietnamese companies through a single broker. As a result, the Adviser will have less flexibility to choose among brokers on behalf of the Fund than is typically the case for investment managers. In addition, because the process of purchasing securities in Vietnam requires that payment to the local broker occur prior to receipt of securities, failure of the broker to deliver the securities will adversely affect the Fund.

The government in Vietnam may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Vietnam. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in Vietnam. Moreover, Vietnam may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer and may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of Vietnam and/or impose additional taxes on foreign investors. These factors, among others, make investing in issuers located or operating in Vietnam significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

The value of the Vietnam Dong may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in equity securities of Vietnamese issuers and the income received by the Fund will be principally in Vietnam Dong. The Fund's exposure to the Vietnam Dong and changes in value of the Vietnam Dong versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions

between U.S. dollars and the Vietnam Dong.

Risk of Investing in Issuers Located Outside of Vietnam. (Market Vectors Vietnam ETF only.) It is currently expected that approximately 26% of the Vietnam Index will consist of securities of issuers located outside of Vietnam that have exposure to the Vietnamese market. Because securities of issuers located outside of Vietnam may not move in tandem with changes in the Vietnamese securities market, Market Vectors Vietnam ETF's portfolio may not be as closely linked to the Vietnamese market as a fund that invests solely in issuers that are located in Vietnam or in issuers that actually derive a substantial portion of their revenues from Vietnam.

Risk of Investing in Foreign Securities. Each Fund may invest in foreign securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact a Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. Certain Funds may also invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In addition, a Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Because a Fund may invest in securities denominated in foreign currencies and the income received by the Fund from these investments will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The values of the currencies of the countries in which a Fund may invest may be subject to a high degree of fluctuation due to changes in interest rates, the effects of monetary policies issued by the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. Therefore, a Fund's exposure to foreign currencies may result in reduced returns to the Fund. Moreover, a Fund may incur costs in connection with conversions between U.S. dollars and foreign currencies. Each Fund may, but is not obligated to, invest in derivative instruments to lock in certain currency exchange rates from time to time.

Risk of Investing in Emerging and Frontier Market Issuers. Certain Funds invest in securities of emerging market issuers and each of Market Vectors Africa Index ETF, Market Vectors Gulf States Index ETF and Market Vectors Vietnam ETF invests its assets in securities of frontier market issuers. Emerging and frontier market countries include countries in Africa, the GCC and Latin America, as well as the following countries: Brazil, Colombia, Egypt, India, Indonesia, Poland, Russia and Vietnam. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in frontier market countries are magnified. Investment in securities of emerging and frontier market issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in a Fund. Such heightened risks may include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, crime (including drug violence) and social instability as a result of religious, ethnic and/or socioeconomic unrest. Issuers in certain emerging and frontier market countries are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable. Additionally, each of the factors described below could have a negative impact on a Fund's performance and increase the volatility of the Fund.

Securities Markets. Securities markets in emerging and frontier market countries are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. Securities markets in emerging and frontier market countries are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. These factors, coupled with restrictions on foreign investment and other factors, limit the supply of securities available for investment by a Fund. This will affect the rate at which the Fund is able to invest in emerging and frontier market countries, the purchase and sale prices for such securities and the timing of purchases and sales. Emerging and frontier markets can experience high rates of inflation, deflation and currency devaluation. The prices of certain securities listed on securities markets in emerging and frontier market countries have been subject to sharp fluctuations and sudden declines, and no assurance can be given as to the future performance of listed securities in general. Volatility of prices may be greater than in more developed securities markets. Moreover, securities markets in emerging and frontier market countries may be closed for extended periods of time or trading on securities markets

may be suspended altogether due to political or civil unrest. Market volatility may also be heightened by the actions of a small number of investors. Brokerage firms in emerging and frontier market countries may be fewer in number and less established than brokerage firms in more developed markets. Since a Fund may need to effect securities transactions through these brokerage firms, the Fund is subject to the risk that these brokerage firms will not be able to fulfill their obligations to the Fund. This risk is magnified to the extent a Fund effects securities transactions through a single brokerage firm or a small number of brokerage firms. In addition, the infrastructure for the safe custody of securities and for purchasing and selling securities, settling trades, collecting dividends, initiating corporate actions, and following corporate activity is not as well developed in emerging and frontier market countries as is the case in certain more developed markets.

Political and Economic Risk. Certain emerging and frontier market countries have historically been subject to political instability and their prospects are tied to the continuation of economic and political liberalization in the region. Instability may result from factors such as government or military intervention in decision making, terrorism, civil unrest, extremism or hostilities between neighboring countries. An outbreak of hostilities could negatively impact a Fund's returns. Extremist

groups in certain countries in the Middle East and North Africa region have traditionally held anti-Western views and are opposed to openness to foreign investments. Egypt borders the Gaza Strip and Israel and there are risks of further instability and violence in the region. Limited political and democratic freedoms in emerging and frontier market countries might cause significant social unrest. These factors may have a significant adverse effect on an emerging or frontier market country's economy.

Many emerging and frontier market countries may be heavily dependent upon international trade and, consequently, may continue to be negatively affected by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which it trades. They also have been, and may continue to be, adversely affected by economic conditions in the countries with which they trade.

In addition, commodities (such as oil, gas and minerals) represent a significant percentage of the Latin American region's exports and many economies in this region are particularly sensitive to fluctuations in commodity prices. Adverse economic events in one country may have a significant adverse effect on other countries of this region. In addition, most Latin American countries have experienced, at one time or another, severe and persistent levels of inflation, including, in some cases, hyperinflation. This has, in turn, led to high interest rates, extreme measures by governments to keep inflation in check, and a generally debilitating effect on economic growth. Although inflation in many countries has lessened, there is no guarantee it will remain at lower levels. The political history of certain Latin American countries has been characterized by political uncertainty, intervention by the military in civilian and economic spheres, and political corruption. Such events could reverse favorable trends toward market and economic reform, privatization, and removal of trade barriers, and result in significant disruption in securities markets in the region.

Also, certain issuers located in emerging and frontier market countries in which a Fund invests may operate in, or have dealings with, countries subject to sanctions and/or embargoes imposed by the U.S. Government and the United Nations and/or countries identified by the U.S. Government as state sponsors of terrorism. As a result, an issuer may sustain damage to its reputation if it is identified as an issuer which operates in, or has dealings with, such countries. A Fund, as an investor in such issuers, will be indirectly subject to those risks.

Investment and Repatriation Restrictions. The government in an emerging or frontier market country may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in such emerging and frontier market countries. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in emerging and frontier market countries and may inhibit a Fund's ability to track its Index. In addition, a Fund may not be able to buy or sell securities or receive full value for such securities. Moreover, certain emerging and frontier market countries may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer; may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of such emerging and frontier market countries; and/or may impose additional taxes on foreign investors. A delay in obtaining a required government approval or a license would delay investments in those emerging and frontier market countries, and, as a result, a Fund may not be able to invest in certain securities while approval is pending. The government of certain emerging and frontier market countries may also withdraw or decline to renew a license that enables a Fund to invest in such country. These factors make investing in issuers located or operating in emerging and frontier market countries significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of a Fund's Shares.

Additionally, investments in issuers located in certain emerging and frontier market countries may be subject to a greater degree of risk associated with governmental approval in connection with the repatriation of investment income, capital or the proceeds of sales of securities by foreign investors. Moreover, there is the risk that if the balance of payments in an emerging or frontier market country declines, the government of such country may impose

temporary restrictions on foreign capital remittances. Consequently, a Fund could be adversely affected by delays in, or a refusal to grant, required governmental approval for repatriation of capital, as well as by the application to the Fund of any restrictions on investments. Furthermore, investments in emerging and frontier market countries may require a Fund to adopt special procedures, seek local government approvals or take other actions, each of which may involve additional costs to the Fund.

Available Disclosure About Emerging and Frontier Market Issuers. Issuers located or operating in emerging and frontier market countries are not subject to the same rules and regulations as issuers located or operating in more developed countries. Therefore, there may be less financial and other information publicly available with regard to issuers located or operating in emerging and frontier market countries and such issuers are not subject to the uniform accounting, auditing and financial reporting standards applicable to issuers located or operating in more developed countries.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

Foreign Currency Considerations. A Fund's assets that are invested in equity securities of issuers in emerging and frontier market countries will generally be denominated in foreign currencies, and the income received by the Fund from these investments will be principally in foreign currencies. The value of an emerging or frontier market country's currency may be subject to a high degree of fluctuation. This fluctuation may be due to changes in interest rates, the effects of monetary policies issued by the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. The economies of certain emerging and frontier market countries can be significantly affected by currency devaluations. Certain emerging and frontier market countries may also have managed currencies which are maintained at artificial levels relative to the U.S. dollar rather than at levels determined by the market. This type of system can lead to sudden and large adjustments in the currency which, in turn, can have a disruptive and negative effect on foreign investors.

A Fund's exposure to an emerging or frontier market country's currency and changes in value of such foreign currencies versus the U.S. dollar may reduce a Fund's investment performance and the value of your investment in the Fund. Meanwhile, a Fund will compute and expects to distribute its income in U.S. dollars, and the computation of income will be made on the date that the income is earned by the Fund at the foreign exchange rate in effect on that date. Therefore, if the value of the respective emerging or frontier market country's currency falls relative to the U.S. dollar between the earning of the income and the time at which a Fund converts the relevant emerging or frontier market country's currency to U.S. dollars, the Fund may be required to liquidate certain positions in order to make distributions if the Fund has insufficient cash in U.S. dollars to meet distribution requirements under the Internal Revenue Code. The liquidation of investments, if required, could be at disadvantageous prices or otherwise have an adverse impact on a Fund's performance.

Certain emerging and frontier market countries also restrict the free conversion of their currency into foreign currencies, including the U.S. dollar. There is no significant foreign exchange market for many such currencies and it would, as a result, be difficult for a Fund to engage in foreign currency transactions designed to protect the value of the Fund's interests in securities denominated in such currencies. Furthermore, if permitted, a Fund may incur costs in connection with conversions between U.S. dollars and an emerging or frontier market country's currency. Foreign exchange dealers realize a profit based on the difference between the prices at which they are buying and selling various currencies. Thus, a dealer normally will offer to sell a foreign currency to a Fund at one rate, while offering a lesser rate of exchange should the Fund desire immediately to resell that currency to the dealer. A Fund will conduct its foreign currency exchange transactions either on a spot (*i.e.*, cash) basis at the spot rate prevailing in the foreign currency exchange market, or through entering into forward, futures or options contracts to purchase or sell foreign currencies. The Market Vectors India Small-Cap Index ETF does not expect to hedge its currency risk.

Operational and Settlement Risk. In addition to having less developed securities markets, emerging and frontier market countries have less developed custody and settlement practices than certain developed countries. Rules adopted under the 1940 Act permit a Fund to maintain its foreign securities and cash in the custody of certain eligible non-U.S. banks and securities depositories. Banks in emerging and frontier market countries that are eligible foreign sub-custodians may be recently organized or otherwise lack extensive operating experience. In addition, in certain emerging and frontier market countries there may be legal restrictions or limitations on the ability of a Fund to recover assets held in custody by a foreign sub-custodian in the event of the bankruptcy of the sub-custodian. Because settlement systems in emerging and frontier market countries may be less organized than in other developed markets, there may be a risk that settlement may be delayed and that cash or securities of the Fund may be in jeopardy because of failures of or defects in the systems. Under the laws in many emerging and frontier market countries, a Fund may be required to release local shares before receiving cash payment or may be required to make cash payment prior to receiving local shares, creating a risk that the Fund may surrender cash or securities without ever receiving securities or cash from the other party. Settlement systems in emerging and frontier market countries also have a higher risk of failed trades and back to back settlements may not be possible.

A Fund may not be able to convert a foreign currency to U.S. dollars in time for the settlement of redemption requests. In the event of a redemption request from an authorized participant, a Fund will be required to deliver U.S. dollars to the authorized participant on the settlement date. In the event that a Fund is not able to convert the foreign currency to U.S. dollars in time for settlement, which may occur as a result of the delays described above, the Fund may be required to liquidate certain investments and/or borrow money in order to fund such redemption. The liquidation of investments, if required, could be at disadvantageous prices or otherwise have an adverse impact on the Fund's performance (*e.g.*, by causing the Fund to overweight foreign currency denominated holdings and underweight other holdings which were sold to fund redemptions). In addition, a Fund will incur interest expense on any borrowings and the borrowings will cause the Fund to be leveraged, which may magnify gains and losses on its investments.

In certain frontier and emerging market countries, the marketability of quoted shares may be limited due to the restricted opening hours of stock exchanges, and a narrow range of investors and a relatively high proportion of market value may be concentrated in the hands of a relatively small number of shareholders. In addition, because certain frontier and emerging market countries' stock exchanges on which a Fund's portfolio securities may trade are open when the NYSE Arca is closed, the Fund may be subject to heightened risk associated with market movements. Trading volume may be lower on certain frontier and emerging market countries' stock exchanges than on more developed securities markets and equities may be generally less liquid. The infrastructure for clearing, settlement and registration on the primary and secondary markets of certain frontier and emerging market countries are less developed than in certain other markets and under certain circumstances this may result in a Fund experiencing delays in settling and/or registering transactions in the markets in which it invests, particularly if the growth of foreign and domestic investment in certain frontier and emerging market countries places an undue burden on such investment infrastructure. Such delays could affect the speed with which a Fund can transmit redemption proceeds and may inhibit the initiation and realization of investment opportunities at optimum times.

Certain issuers in emerging and frontier market countries may utilize share blocking schemes. Share blocking refers to a practice, in certain foreign markets, where voting rights related to an issuer's securities are predicated on these securities being blocked from trading at the custodian or sub-custodian level for a period of time around a shareholder meeting. These restrictions have the effect of barring the purchase and sale of certain voting securities within a specified number of days before and, in certain instances, after a shareholder meeting where a vote of shareholders will be taken. Share blocking may prevent the Fund from buying or selling securities for a period of time. During the time that shares are blocked, trades in such securities will not settle. The blocking period can last up to several weeks. The process for having a blocking restriction lifted can be quite onerous with the particular requirements varying widely by country. In addition, in certain countries, the block cannot be removed. As a result of the ramifications of voting ballots in markets that allow share blocking, the Adviser, on behalf of the Fund, reserves the right to abstain from voting proxies in those markets.

Corporate and Securities Laws. Securities laws in emerging and frontier market countries are relatively new and unsettled and, consequently, there is a risk of rapid and unpredictable change in laws regarding foreign investment, securities regulation, title to securities and shareholder rights. Accordingly, foreign investors may be adversely affected by new or amended laws and regulations. In addition, the systems of corporate governance to which emerging and frontier market issuers are subject may be less advanced than those systems to which issuers located in more developed countries are subject, and therefore, shareholders of issuers located in emerging and frontier market countries may not receive many of the protections available to shareholders of issuers located in more developed countries. In circumstances where adequate laws and shareholder rights exist, it may not be possible to obtain swift and equitable enforcement of the law. In addition, the enforcement of systems of taxation at federal, regional and local levels in emerging and frontier market countries may be inconsistent and subject to sudden change.

Risk of Investing in Depositary Receipts. A Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. The issuers of certain depositary receipts are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities. Investment in depositary receipts may be less liquid than the underlying shares in their primary trading market and may negatively affect the Fund's ability to replicate the performance of its Index. In addition, investments in depositary receipts may lead to tracking error.

Risk of Investing in the Basic Materials Sector. (Market Vectors Africa Index ETF, Market Vectors Colombia ETF, Market Vectors Egypt Index ETF, Market Vectors Germany Small-Cap ETF, Market Vectors India Small-Cap Index ETF, Market Vectors Indonesia Index ETF, Market Vectors Latin America Small-Cap Index ETF, Market Vectors Poland ETF, Market Vectors Russia ETF and Market Vectors Russia Small-Cap ETF only.) The basic materials sector

includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted each Fund's respective Index includes securities of issuers in the basic materials sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Discretionary Sector. (Market Vectors Brazil Small-Cap ETF, Market Vectors Germany Small-Cap ETF, Market Vectors India Small-Cap Index ETF, Market Vectors Indonesia Index ETF and Market Vectors Latin America Small-Cap Index ETF only.) The consumer discretionary sector includes automotive, household durable goods and apparel manufacturers and companies that provide retail, lodging, leisure or food and beverage services. Because as currently constituted

**ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)**

each Fund's respective Index includes securities of issuers in the consumer discretionary sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Staples Sector. (Market Vectors Indonesia Index ETF and Market Vectors Indonesia Small-Cap ETF only.) The consumer staples sector includes, among others, manufacturers and distributors of food, beverages and tobacco, food and drug retailers and products of non-durable household goods and consumer products. Because as currently constituted each Fund's respective Index includes securities of issuers in the consumer staples sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the consumer staples sector. These companies may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending. Companies in this sector are also affected by changes in government regulation, world events and economic conditions.

Risk of Investing in the Energy Sector. (Market Vectors Africa Index ETF, Market Vectors Colombia ETF, Market Vectors Indonesia Index ETF, Market Vectors Indonesia Small-Cap ETF, Market Vectors Poland ETF, Market Vectors Russia ETF, Market Vectors Russia Small-Cap ETF and Market Vectors Vietnam ETF only.) The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted each Fund's respective Index includes securities of issuers in the energy sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted each Fund's respective Index includes securities of issuers in the financial services sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. (Market Vectors Brazil Small-Cap ETF, Market Vectors Egypt Index ETF, Market Vectors Germany Small-Cap ETF, Market Vectors Gulf States Index ETF, Market Vectors India Small-Cap Index ETF, Market Vectors Indonesia Small-Cap ETF, Market Vectors Latin America Small-Cap Index ETF, Market

Vectors Russia Small-Cap ETF and Market Vectors Vietnam ETF only.) The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted each Fund's respective Index includes securities of issuers in the industrials sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates. The stock prices of companies in the industrials sector are affected by supply and demand both for their specific product or service and for industrial sector products in general. The products of manufacturing companies may face product obsolescence due to rapid technological developments and frequent new product introduction. In addition, the industrials sector may also be adversely affected by changes or trends in commodity prices, which may be influenced or characterized by unpredictable factors.

Risk of Investing in the Information Technology Sector. (Market Vectors Germany Small-Cap ETF and Market Vectors India Small-Cap Index ETF only.) The information technology sector includes software developers, providers of information technology consulting and services and manufacturers and distributors of computers, peripherals, communications equipment and semiconductors. Because as currently constituted the information technology sector represents a significant portion of the Germany Small-Cap Index and the India Small-Cap Index, Market Vectors Germany Small-Cap ETF and Market Vectors India Small-Cap Index ETF will be sensitive to changes in, and their performance may depend to a greater extent on, the overall condition of the information technology sector. Technology companies face intense competition, both domestically and internationally, which may have an adverse affect on profit margins. Technology companies may have limited product lines, markets, financial resources or personnel. The products of technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Risk of Investing in the Telecommunications Sector (Market Vectors Africa Index ETF, Market Vectors Egypt Index ETF, Market Vectors Gulf States Index ETF, and Market Vectors Russia ETF only.) The telecommunications sector includes companies that provide telecommunications services. Because as currently constituted each Fund's respective Index includes securities of issuers in the telecommunications sector, a Fund may be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the telecommunications sector. Companies in the telecommunications sector may be affected by industry competition, substantial capital requirements, government regulations and obsolescence of telecommunications products and services due to technological advancement.

Risk of Investing in the Utilities Sector. (Market Vectors Colombia ETF and Market Vectors Poland ETF only.) The utilities sector includes companies that produce or distribute electricity, gas or water. Because as currently constituted the utilities sector represents a significant portion of the Colombia Index and Poland Index, Market Vectors Colombia ETF and Market Vectors Poland ETF will be sensitive to changes in, and their performance may depend to a greater extent on, the overall condition of the utilities sector. Issuers in the utilities sector are subject to a variety of factors that may adversely affect their business or operations, including high interest costs in connection with capital construction and improvement programs, difficulty in raising capital in adequate amounts on reasonable terms in periods of high inflation and unsettled capital markets, and the effects of economic slowdowns and surplus capacity. Companies in the utilities sector are subject to extensive regulation, including governmental regulation of rates charged to customers, and may face difficulty in obtaining regulatory approval of new technologies. The effects of a U.S. national energy policy and lengthy delays and greatly increased costs and other problems associated with the design, construction, licensing, regulation and operation of nuclear facilities for electric generation, including, among other considerations, the problems associated with the use of radioactive materials and the disposal of radioactive wastes, may adversely affect companies in the utilities sector. Certain companies in the utilities sector may be inexperienced and may suffer potential losses resulting from a developing deregulatory environment. Technological innovations may render existing plants, equipment or products obsolete. Companies in the utilities sector may face increased competition from other providers of utility services. The potential impact of terrorist activities on companies in the utilities sector and its customers and the impact of natural or man-made disasters may adversely affect the utilities sector. Issuers in the utilities sector also may be subject to regulation by various governmental authorities and may be affected by the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards.

Risk of Investing in Small- and/or Medium-Capitalization Companies. Each Fund may invest in small- and/or medium-capitalization companies and, therefore will be subject to certain risks associated with small- and medium-capitalization companies. These companies are often subject to less analyst coverage and may be in early and less predictable periods of their corporate existences, with little or no record of profitability. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. These companies tend to have smaller revenues, narrower product lines, less management depth and

experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies. Returns on investments in securities of small- and medium-capitalization companies could trail the returns on investments in securities of larger companies.

Risk of Investing in Micro-Capitalization Companies. (Market Vectors Africa Index ETF, Market Vectors Egypt Index ETF, Market Vectors Gulf States Index ETF, Market Vectors India Small-Cap Index ETF, Market Vectors Indonesia Small-Cap ETF and Market Vectors Vietnam ETF only.) A Fund may invest in micro-capitalization companies. These companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. Micro-capitalization companies may be newly formed or in the early stages of development, with limited product lines, markets or financial resources and may lack management depth. In addition, there may be less public information available about these companies. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

future ability to sell these securities. Also, it may take a long time before the Fund realizes a gain, if any, on an investment in a micro-capitalization company.

Equity Securities Risk. The value of the equity securities held by each Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by a Fund participate, or factors relating to specific issuers in which a Fund invests. For example, an adverse event, such as an unfavorable earnings report, may result in a decline in the value of equity securities of an issuer held by a Fund; the price of the equity securities of an issuer may be particularly sensitive to general movements in the securities markets; or a drop in the securities markets may depress the price of most or all of the equities securities held by a Fund. In addition, the equity securities of an issuer in a Fund's portfolio may decline in price if the issuer fails to make anticipated dividend payments. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Issuer-Specific Changes Risk. (Market Vectors Egypt Index ETF, Market Vectors Indonesia Small-Cap ETF, Market Vectors Poland ETF, Market Vectors Russia Small-Cap ETF and Market Vectors Vietnam ETF only.) The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers. A change in the financial condition, market perception or credit rating of an issuer of securities included in a Fund's Index may cause the value of its securities to decline.

Market Risk. The prices of the securities in the Funds are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Funds may lose money. Overall securities values could decline generally or underperform other investments.

Index Tracking Risk. Each Fund's return may not match the return of its Index for a number of reasons. For example, a Fund incurs a number of operating expenses not applicable to its Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of its Index and, to the extent the Fund creates and redeems Creation Units in cash, raising cash to meet redemptions or deploying cash in connection with newly created Creation Units. A Fund's return may also deviate significantly from the return of its Index because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of its Index. A Fund may not be fully invested at times, either as a result of cash flows into the Fund (if the Fund effects creations and redemptions for cash) or reserves of cash held by the Fund to pay expenses or meet redemptions. In addition, a Fund may not be able to invest in certain securities included in its Index, or invest in them in the exact proportions they represent of its Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. Moreover, a Fund may be delayed in purchasing or selling securities included in its Index. Any issues a Fund encounters with regard to currency convertibility (including the cost of borrowing funds, if any) and repatriation may also increase the index tracking risk.

Market Vectors Africa Index ETF, Market Vectors Brazil Small-Cap ETF, Market Vectors Colombia ETF, Market Vectors Egypt Index ETF, Market Vectors Gulf States Index ETF, Market Vectors India Small-Cap Index ETF, Market Vectors Latin America Small-Cap ETF and Market Vectors Vietnam ETF may accept cash in connection with a purchase of Creation Units or effect their redemptions in cash rather than in-kind and, as a result, each Fund's ability to match the return of its respective Index will be affected.

Pursuant to the methodology of the Index Provider (defined herein) used to calculate and maintain the India Small-Cap Index, when a security in the India Small-Cap Index reaches its limitation on foreign ownership, it may not be removed from the India Small-Cap Index that day. The Market Vectors India Small-Cap Index ETF, however, may be forced to sell securities at inopportune times or for prices other than at current market values or may elect not to sell such securities on the day that they are removed from the India Small-Cap Index, due to market conditions or otherwise. Due to these factors, the variation between the Fund's annual return and the return of its India Small-Cap Index may increase.

In addition, with respect to Market Vectors Vietnam ETF, pursuant to the methodology of the Index Provider (defined herein) used to calculate and maintain the Vietnam Index, a company may be removed from the Vietnam Index at a quarterly rebalancing as a result of reaching its limitation on foreign ownership. Consequently, Market Vectors Vietnam ETF may be forced to sell securities at inopportune times or for prices other than at current market values or may elect not to sell such securities on the day that they are removed from the Vietnam Index, due to market conditions or otherwise. Due to these factors, the variation between a Fund's annual return and the return of its Index may increase.

Each Fund is expected to fair value certain of the foreign securities it holds except those securities primarily traded on exchanges that close at the same time the Fund calculates its NAV. See Shareholder Information Determination of NAV. To the extent a Fund calculates its NAV based on fair value prices and the value of its Index is based on securities closing price on local foreign markets (*i.e.*, the value of its Index is not based on fair value prices) or if a Fund otherwise calculates its NAV based on prices that differ from those used in calculating its Index, the Fund's ability to track its Index may be adversely affected. The need to comply with the tax diversification and other requirements of the Internal Revenue Code may also impact a Fund's ability to replicate the performance of its Index. In addition, if a Fund utilizes depositary receipts and other derivative instruments, its return may not correlate as well with its Index as would be the case if the Fund purchased all the securities in its Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Replication Management Risk. Unlike many investment companies, the Funds are not actively managed. Therefore, unless a specific security is removed from its Index, a Fund generally would not sell a security because the security's issuer is in financial trouble. If a specific security is removed from a Fund's Index, the Fund may be forced to sell such security at an inopportune time or for prices other than at current market values. An investment in a Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. Each Fund's Index may not contain the appropriate or a diversified mix of securities for any particular economic cycle. The timing of changes in the securities of a Fund's portfolio in seeking to replicate its Index could have a negative effect on the Fund. Unlike with an actively managed fund, the Adviser does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, a Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. The NAV of the Shares will fluctuate with changes in the market value of each Fund's securities holdings. The market prices of Shares will fluctuate in accordance with changes in NAV and supply and demand on NYSE Arca. The Adviser cannot predict whether Shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the securities of the Index trading individually or in the aggregate at any point in time. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most other ETFs, Market Vectors Africa Index ETF, Market Vectors Brazil Small-Cap ETF, Market Vectors Colombia ETF, Market Vectors Egypt Index ETF, Market Vectors Gulf States Index ETF, Market Vectors India Small-Cap Index ETF, Market Vectors Latin America Small-Cap ETF and Market Vectors Vietnam ETF effect all of, their creations and redemptions principally for cash, rather than in-kind securities. As a result, an investment in such Fund may be less tax-efficient than an investment in a more conventional ETF. Other ETFs generally are able to make in-kind redemptions and avoid realizing gains in connection with transactions designed to raise cash to meet redemption requests. Because these Funds currently intend to effect all or a portion of redemptions, as applicable, for cash, rather than in-kind distributions, they may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds, which involves transaction costs. If a Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized if it were to distribute portfolio securities in-kind, or to recognize such gain sooner than would otherwise be required. The Funds generally intend to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an

investment in a different ETF.

Non-Diversified Risk. Each Fund is a separate investment portfolio of Market Vectors ETF Trust (the "Trust"), which is an open-end investment company registered under the 1940 Act. Each Fund is classified as a non-diversified investment company under the 1940 Act. As a result, each Fund is subject to the risk that it will be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on a Fund's NAV and may make the Fund more volatile than more diversified funds. Market Vectors Colombia ETF, Market Vectors Egypt Index ETF, Market Vectors Poland ETF and Market Vectors Vietnam ETF may be particularly vulnerable to this risk because their respective Indices they seek to replicate are comprised of securities of a very limited number of companies.

Concentration Risk. A Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent that its respective Index concentrates in a particular sector or sectors or industry or group of industries. The securities

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

of many or all of the companies in the same sector or industry may decline in value due to developments adversely affecting such sector or industry. By concentrating its assets in a particular sector or sectors or industry or group of industries, a Fund is subject to the risk that economic, political or other conditions that have a negative effect on that sector or industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

ADDITIONAL RISKS

Risk of Investing in Derivatives. Derivatives are financial instruments whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. A Fund's use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. Moreover, although the value of a derivative is based on an underlying indicator, a derivative does not carry the same rights as would be the case if a Fund invested directly in the underlying securities.

Derivatives are subject to a number of risks, such as potential changes in value in response to market developments, in the case of over-the-counter derivatives, or as a result of the counterparty's credit quality and the risk that a derivative transaction may not have the effect the Adviser anticipated. Derivatives also involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile, and a Fund could lose more than the amount it invests. The use of derivatives may increase the amount and affect the timing and character of taxes payable by shareholders of a Fund.

Many derivative transactions are entered into over-the-counter (not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of a Fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, a Fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the Fund's rights as a creditor (*e.g.*, the Fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for a Fund's derivative positions at any time.

Swaps. The use of swap agreements entails certain risks, which may be different from, and possibly greater than, the risks associated with investing directly in the underlying asset for the swap agreement. For example, swap agreements may be subject to the risk of default by a counterparty as a result of bankruptcy or otherwise, which may cause a Fund to lose payments due by such counterparty altogether, or collect only a portion thereof, which collection could involve additional costs or delays. Swap agreements may be subject to liquidity risk, which exists when a particular swap is difficult to purchase or sell. If a swap transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses to a Fund. In addition, a swap transaction may be subject to a Fund's limitation on investments in illiquid securities. Swap agreements may be subject to pricing risk, which exists when a particular swap agreement becomes extraordinarily expensive (or inexpensive) relative to historical prices or the prices of corresponding cash market instruments. The swaps market is subject to extensive regulation under the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank) and certain SEC and Commodity Futures Trading Commission (CFTC) rules promulgated thereunder. It is possible that developments in the swaps market, including new and additional government regulation, could result in higher Fund costs and expenses and could adversely affect the Fund's ability, among other things, to terminate existing swap agreements or to realize amounts to be received under such agreements.

Options. An option is a contract that provides the holder the right to buy or sell shares at a fixed price, within a specified period of time. An American call option gives the option holder the right to buy the underlying security from

the option writer at the option exercise price at any time prior to the expiration of the option. A European call option gives the option holder the right to buy the underlying security from the option writer only on the option expiration date. An American put option gives the option holder the right to sell the underlying security to the option writer at the option exercise price at any time prior to the expiration of the option. A European put option gives the option holder the right to sell the underlying security to the option writer at the option exercise price only on the option expiration date. A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well-conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

Warrants. Warrants are equity securities in the form of options issued by a corporation which give the holder the right to purchase stock, usually at a price that is higher than the market price at the time the warrant is issued. A purchaser takes the risk that the warrant may expire worthless because the market price of the common stock fails to rise above the price set by the warrant.

Futures. Futures contracts generally provide for the future sale by one party and purchase by another party of a specified instrument, index or commodity at a specified future time and at a specified price. The value of a futures contract tends to

increase and decrease in tandem with the value of the underlying instrument. The prices of futures can be highly volatile, using futures can lower total return, and the potential loss from futures can exceed the Fund's initial investment in such contracts. There is also the risk of loss by the Funds of margin deposits in the event of bankruptcy of a broker with whom a Fund has an open position in the futures contract.

Currency Forwards. A currency forward transaction is a contract to buy or sell a specified quantity of currency at a specified date in the future at a specified price which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. Currency forward contracts may be used to increase or reduce exposure to currency price movements. The use of currency forward transactions involves certain risks. For example, if the counterparty under the contract defaults on its obligation to make payments due from it as a result of its bankruptcy or otherwise, the Fund may lose such payments altogether or collect only a portion thereof, which collection could involve costs or delay.

Participation Notes. Participation Notes (P-Notes) are issued by banks or broker-dealers and are designed to offer a return linked to the performance of a particular underlying equity security or market. P-Notes can have the characteristics or take the form of various instruments, including, but not limited to, certificates or warrants. The holder of a P-Note that is linked to a particular underlying security is entitled to receive any dividends paid in connection with the underlying security. However, the holder of a P-Note generally does not receive voting rights as it would if it directly owned the underlying security.

P-Notes constitute direct, general and unsecured contractual obligations of the banks or broker-dealers that issue them, which therefore subject a Fund to counterparty risk, as discussed below.

Investments in P-Notes involve certain risks in addition to those associated with a direct investment in the underlying foreign companies or foreign securities markets whose return they seek to replicate. For instance, there can be no assurance that the trading price of a P-Note will equal the underlying value of the foreign company or foreign securities market that it seeks to replicate. As the purchaser of a P-Note, a Fund is relying on the creditworthiness of the counterparty issuing the P-Note and has no rights under a P-Note against the issuer of the underlying security. Therefore, if such counterparty were to become insolvent, a Fund would lose its investment. The risk that a Fund may lose its investments due to the insolvency of a single counterparty may be amplified to the extent the Fund purchases P-Notes issued by one issuer or a small number of issuers. P-Notes also include transaction costs in addition to those applicable to a direct investment in securities. In addition, a Fund's use of P-Notes may cause the Fund's performance to deviate from the performance of the portion of its Index to which the Fund is gaining exposure through the use of P-Notes.

Due to liquidity and transfer restrictions, the secondary markets on which P-Notes are traded may be less liquid than the markets for other securities, which may lead to the absence of readily available market quotations for securities in a Fund's portfolio. The ability of a Fund to value its securities becomes more difficult and the judgment in the application of fair value procedures may play a greater role in the valuation of a Fund's securities due to reduced availability of reliable objective pricing data. Consequently, while such determinations will be made in good faith, it may nevertheless be more difficult for a Fund to accurately assign a daily value to such securities.

Leverage Risk. To the extent that a Fund borrows money or utilizes certain derivatives, it may be leveraged. Leveraging generally exaggerates the effect on NAV of any increase or decrease in the market value of a Fund's portfolio securities.

Short History of an Active Market/No Guarantee of Active Trading Market. Certain Funds are recently organized series of an investment company. While Shares are listed on NYSE Arca, there can be no assurance that active trading markets for the Shares will be maintained, especially for recently organized Funds. Van Eck Securities Corporation, the distributor of each Fund's Shares (the Distributor), does not maintain a secondary market in the Shares.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of a Fund will continue to be met or will remain unchanged.

TAX ADVANTAGED PRODUCT STRUCTURE

Unlike many conventional mutual funds which are only bought and sold at closing NAVs, the Shares have been designed to be tradable in a secondary market on an intra-day basis and to be created and redeemed in-kind, except for Market Vectors Africa Index ETF, Market Vectors Brazil Small-Cap ETF, Market Vectors Colombia ETF, Market Vectors Egypt Index ETF, Market Vectors Gulf States Index ETF, Market Vectors India Small-Cap Index ETF, Market Vectors Latin America Small-Cap ETF and Market Vectors Vietnam ETF whose Shares are created and redeemed principally for cash, in Creation Units at each day's market close. These in-kind arrangements are designed to mitigate the adverse effects on a Fund's portfolio that could arise from frequent cash purchase and redemption transactions that affect the NAV of the Fund. Moreover, in contrast to conventional mutual funds,

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

where frequent redemptions can have an adverse tax impact on taxable shareholders because of the need to sell portfolio securities which, in turn, may generate taxable gain, the in-kind redemption mechanism of certain Funds, to the extent used, generally is not expected to lead to a tax event for shareholders.

PORTFOLIO HOLDINGS

A description of each Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's SAI.

MANAGEMENT OF THE FUNDS

Board of Trustees. The Board of Trustees of the Trust has responsibility for the general oversight of the management of the Funds, including general supervision of the Adviser and other service providers, but is not involved in the day-to-day management of the Trust. A list of the Trustees and the Trust officers, and their present positions and principal occupations, is provided in the Funds' SAI.

Investment Adviser. Under the terms of an investment management agreement between the Trust and Van Eck Associates Corporation with respect to the Funds (the "Investment Management Agreement"), Van Eck Associates Corporation serves as the adviser to each Fund and, subject to the supervision of the Board of Trustees, is responsible for the day-to-day investment management of the Fund. As of March 31, 2013, the Adviser managed approximately \$35.0 billion in assets. The Adviser has been an investment adviser since 1955 and also acts as adviser or sub-adviser to other mutual funds, exchange-traded funds, other pooled investment vehicles and separate accounts. The Adviser's principal business address is 335 Madison Avenue, 19th Floor, New York, New York 10017.

A discussion regarding the Board of Trustees' approval of the Investment Management Agreement is available in the Trust's semi-annual report for the period ended June 30, 2012.

For the services provided to each Fund under the Investment Management Agreement, each Fund pays the Adviser monthly fees based on a percentage of each Fund's average daily net assets at the annual rate of 0.50%. From time to time, the Adviser may waive all or a portion of its fee. Until at least May 1, 2014, the Adviser has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of each Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.55% (with respect to Market Vectors Germany Small-Cap ETF), 0.57% (with respect to Market Vectors Indonesia Index ETF), 0.59% (with respect to Market Vectors Brazil Small-Cap ETF), 0.60% (with respect to Market Vectors Poland ETF), 0.61% (with respect to Market Vectors Indonesia Small-Cap ETF), 0.62% (with respect to Market Vectors Russia ETF), 0.63% (with respect to Market Vectors Latin America Small-Cap Index ETF), 0.67% (with respect to Market Vectors Russia Small-Cap ETF), 0.75% (with respect to Market Vectors Colombia ETF), 0.76% (with respect to Market Vectors Vietnam ETF), 0.78% (with respect to Market Vectors Africa Index ETF), 0.85% (with respect to Market Vectors India Small-Cap Index ETF), 0.94% (with respect to Market Vectors Egypt Index ETF) and 0.98% (with respect to Market Vectors Gulf States Index ETF) of its average daily net assets per year. Offering costs excluded from the expense caps are: (a) legal fees pertaining to a Fund's Shares offered for sale; (b) SEC and state registration fees; and (c) initial fees paid for Shares of a Fund to be listed on an exchange.

Each Fund is responsible for all of its expenses, including the investment advisory fees, costs of transfer agency, custody, legal, audit and other services, interest, taxes, any distribution fees or expenses, offering fees or expenses and extraordinary expenses.

Administrator, Custodian and Transfer Agent. Van Eck Associates Corporation is the administrator for the Funds (the Administrator), and The Bank of New York Mellon is the custodian of the Funds' assets and provides transfer agency and fund accounting services to the Funds. The Administrator is responsible for certain clerical, recordkeeping and/or bookkeeping services which are provided pursuant to the Investment Management Agreement.

Distributor. Van Eck Securities Corporation is the distributor of the Shares. The Distributor will not distribute Shares in less than Creation Units, and does not maintain a secondary market in the Shares. The Shares are traded in the secondary market.

PORTFOLIO MANAGERS

The portfolio managers who currently share joint responsibility for the day-to-day management of each Fund's portfolio are Hao-Hung (Peter) Liao and George Cao. Mr. Liao has been employed by the Adviser since the summer of 2004 as an Analyst. Mr. Liao also serves as a portfolio manager for certain other investment companies advised by the Adviser. Mr. Cao has been employed by the Adviser since December 2007 as a Senior Analyst. Prior to joining the Adviser, he served as a Controller of Operations Administrations Division and Corporate Safety (September 2006-December 2007) for United Airlines. See the Funds' SAI for additional information about the portfolio managers' compensation, other accounts managed by the portfolio managers and their respective ownership of Shares of each Fund.

DETERMINATION OF NAV

The NAV per Share for each Fund is computed by dividing the value of the net assets of the Fund (*i.e.*, the value of its total assets less total liabilities) by the total number of Shares outstanding. Expenses and fees, including the management fee, are accrued daily and taken into account for purposes of determining NAV. The NAV of each Fund is determined each business day as of the close of trading (ordinarily 4:00 p.m. Eastern time) on the New York Stock Exchange (NYSE). Any assets or liabilities denominated in currencies other than the U.S. dollar are converted into U.S. dollars at the current market rates on the date of valuation as quoted by one or more sources.

The values of each Fund's portfolio securities are based on the securities' closing prices on local markets when available. Due to the time difference between the United States and certain countries in which a Fund invests, securities on these exchanges may not trade at times when Shares of the Fund will trade. In the absence of a last reported sales price, or if no sales were reported, and for other assets for which market quotes are not readily available, values may be based on quotes obtained from a quotation reporting system, established market makers or by an outside independent pricing service. Prices obtained by an outside independent pricing service may use information provided by market makers or estimates of market values obtained from yield data related to investments or securities with similar characteristics and may use a computerized grid matrix of securities and its evaluations in determining what it believes is the fair value of the portfolio securities. If a market quotation for a security is not readily available or the Adviser believes it does not otherwise accurately reflect the market value of the security at the time a Fund calculates its NAV, the security will be fair valued by another method that the Adviser believes will better reflect the security's market value in accordance with the Trust's valuation policies and procedures approved by the Board of Trustees. Each Fund may use fair value pricing in a variety of circumstances, including but not limited to, situations when the value of a security in the Fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded (such as a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. In addition, each Fund that holds foreign equity securities currently expects that it will fair value certain of such securities held by the Fund each day the Fund calculates its NAV, except those securities principally traded on exchanges that close at the same time a Fund calculates its NAV. Accordingly, a Fund's NAV is expected to reflect certain portfolio securities' fair values rather than their market prices at the time the exchanges on which they principally trade close. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate a Fund's NAV and the prices used by such Fund's Index. This may adversely affect a Fund's ability to track its Index. With respect to securities that are primarily listed on foreign exchanges, the value of a Fund's portfolio securities may change on days when you will not be able to purchase or sell your Shares.

BUYING AND SELLING EXCHANGE-TRADED SHARES

The Shares of the Funds are listed on NYSE Arca. If you buy or sell Shares in the secondary market, you will incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. In times of severe market disruption or low trading volume in a Fund's Shares, this spread can increase significantly. It is anticipated that the Shares will trade in the secondary market at prices that may differ to varying degrees from the NAV of the Shares. During periods of disruptions to creations and redemptions or the existence of extreme market volatility, the market prices of Shares are more likely to differ significantly from the Shares' NAV.

The Depository Trust Company (DTC) serves as securities depository for the Shares. (The Shares may be held only in book-entry form; stock certificates will not be issued.) DTC, or its nominee, is the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or its participants (described

below). Beneficial owners of Shares are not entitled to have Shares registered in their names, will not receive or be entitled to receive physical delivery of certificates in definitive form and are not considered the registered holder thereof. Accordingly, to exercise any rights of a holder of Shares, each beneficial owner must rely on the procedures of: (i) DTC; (ii) DTC Participants, *i.e.*, securities brokers and dealers, banks, trust companies, clearing corporations and certain other organizations, some of whom (and/or their representatives) own DTC; and (iii) Indirect Participants, *i.e.*, brokers, dealers, banks and trust companies that clear through or maintain a custodial relationship with a DTC Participant, either directly or indirectly, through which such beneficial owner holds its interests. The Trust understands that under existing industry practice, in the event the Trust requests any action of holders of Shares, or a beneficial owner desires to take any action that DTC, as the record owner of all outstanding Shares, is entitled to take, DTC would authorize the DTC Participants to take such action and that the DTC Participants would authorize the Indirect Participants and beneficial owners acting through such DTC Participants to take such action and would otherwise act upon the instructions of beneficial owners owning through them. As described above, the Trust recognizes DTC or its nominee as the owner of all Shares for all purposes. For more information, see the section entitled *Book Entry Only System* in the Funds *SAI*.

SHAREHOLDER INFORMATION (continued)

The NYSE Arca is open for trading Monday through Friday and is closed on weekends and the following holidays; New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. Because non-U.S. exchanges may be open on days when a Fund does not price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell a Fund's Shares.

Market Timing and Related Matters. The Funds impose no restrictions on the frequency of purchases and redemptions. The Board of Trustees considered the nature of each Fund (*i.e.*, a fund whose shares are expected to trade intra-day), that the Adviser monitors the trading activity of authorized participants for patterns of abusive trading, that the Funds reserve the right to reject orders that may be disruptive to the management of or otherwise not in the Funds' best interests, and that each Fund fair values certain of its securities. Given this structure, the Board of Trustees determined that it is not necessary to impose restrictions on the frequency of purchases and redemptions for the Funds at the present time.

DISTRIBUTIONS

Net Investment Income and Capital Gains. As a shareholder of a Fund, you are entitled to your share of such Fund's distributions of net investment income and net realized capital gains on its investments. Each Fund pays out substantially all of its net earnings to its shareholders as distributions.

Each Fund typically earns income dividends from stocks and interest from debt securities. These amounts, net of expenses, are typically passed along to Fund shareholders as dividends from net investment income. Each Fund realizes capital gains or losses whenever it sells securities. Net capital gains are distributed to shareholders as capital gain distributions.

Net investment income, if any, and net capital gains, if any, are typically distributed to shareholders at least annually. Dividends may be declared and paid more frequently to improve index tracking or to comply with the distribution requirements of the Internal Revenue Code. In addition, a Fund may determine to distribute at least annually amounts representing the full dividend yield net of expenses on the underlying investment securities, as if the Fund owned the underlying investment securities for the entire dividend period, in which case some portion of each distribution may result in a return of capital, which, for tax purposes, is treated as a return of your investment in Shares. Record shareholders will be notified regarding the portion of the distribution which represents a return of capital.

Distributions in cash may be reinvested automatically in additional Shares of a Fund only if the broker through which you purchased Shares makes such option available.

TAX INFORMATION

As with any investment, you should consider how your Fund investment will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in a Fund, including the possible application of foreign, state and local taxes. Unless your investment in a Fund is through a tax-exempt entity or tax-deferred retirement account, such as a 401(k) plan, you need to be aware of the possible tax consequences when: (i) the Fund makes distributions, (ii) you sell Shares in the secondary market or (iii) you create or redeem Creation Units.

Taxes on Distributions. As noted above, each Fund expects to distribute net investment income at least annually, and any net realized long-term or short-term capital gains annually. Each Fund may also pay a special distribution at any time to comply with U.S. federal tax requirements.

In general, your distributions are subject to U.S. federal income tax when they are paid, whether you take them in cash or reinvest them in a Fund. Distributions of net investment income, including any net short-term gains, if any, are generally taxable as ordinary income. Whether on distributions of capital gains represent long-term or short-term capital gains is determined by how long a Fund owned the investments that generated them, rather than how long you have owned your Shares. Distributions of net short-term capital gains in excess of net long term capital losses, if any, are generally taxable as ordinary income. Distributions of net long-term capital gains in excess of net short-term capital losses, if any, that are reported as capital gain dividends are generally taxable as long-term capital gains. After 2012, long-term capital gains of non-corporate shareholders are taxable at a maximum rate of 15% or 20%, depending on whether the shareholder's income exceeds certain threshold amounts.

The Funds may receive dividends, the distribution of which the Fund may designate as qualified dividends. In the event that a Fund receives such a dividend and designates the distribution of such dividend as a qualified dividend, the dividend may be taxed at the maximum capital gains rates, provided holding period and other requirements are met at both the shareholder and the Fund level.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of your investment to the extent of your basis in the Shares, and generally as capital gain thereafter. A return of capital, which for tax purposes is treated as a return of your investment, reduces your basis in Shares, thus reducing any loss or increasing any gain

on a subsequent taxable disposition of Shares. A distribution will reduce a Fund's NAV per Share and may be taxable to you as ordinary income or capital gain even though, from an economic standpoint, the distribution may constitute a return of capital.

Dividends, interest and gains from non-U.S. investments of a Fund may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may, in some cases, reduce or eliminate such taxes.

If more than 50% of a Fund's total assets at the end of its taxable year consist of foreign securities, the Fund may elect to pass through to its investors certain foreign income taxes paid by the Fund, with the result that each investor will (i) include in gross income, as an additional dividend, even though not actually received, the investor's pro rata share of the Fund's foreign income taxes, and (ii) either deduct (in calculating U.S. taxable income) or credit (in calculating U.S. federal income), subject to certain holding period and other limitations, the investor's pro rata share of the Fund's foreign income taxes. It is expected that more than 50% of each Fund's assets will consist of foreign securities.

Backup Withholding. Each Fund may be required to withhold a percentage of your distributions and proceeds if you have not provided a taxpayer identification number or social security number or otherwise established a basis for exemption from backup withholding. The backup withholding rate for individuals is currently 28%. This is not an additional tax and may be refunded, or credited against your U.S. federal income tax liability, provided certain required information is furnished to the Internal Revenue Service.

Taxes on the Sale or Cash Redemption of Exchange Listed Shares. Currently, any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as a short term capital gain or loss if held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such Shares. The ability to deduct capital losses may be limited. To the extent that a shareholder's Shares are redeemed for cash, this is normally treated as a sale for tax purposes.

Taxes on Creations and Redemptions of Creation Units. A person who exchanges securities for Creation Units generally will recognize a gain or loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of exchange and the sum of the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for such Creation Units. A person who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for Creation Units cannot be deducted currently under the rules governing wash sales, or on the basis that there has been no significant change in economic position. Persons exchanging securities for Creation Units or redeeming Creation Units should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible and the tax treatment of any creation or redemption transaction.

Under current U.S. federal income tax laws, any capital gain or loss realized upon a redemption (or creation) of Creation Units is generally treated as long-term capital gain or loss if the Shares (or securities surrendered) have been held for more than one year and as a short-term capital gain or loss if the Shares (or securities surrendered) have been held for one year or less.

If you create or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you created or sold and at what price.

Medicare Tax. For taxable years beginning after December 31, 2012, an additional 3.8% Medicare tax will be imposed on certain net investment income (including ordinary dividends and capital gain distributions received from

the Fund and net gains from redemptions or other taxable dispositions of Fund Shares) of U.S. individuals, estates and trusts to the extent that such person's modified adjusted gross income (in the case of an individual) or adjusted gross income (in the case of an estate or trust) exceeds certain threshold amounts.

Non-U.S. Shareholders. If you are not a citizen or resident alien of the United States, a Fund's ordinary income dividends (which include distributions of net short-term capital gains) will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or unless such income is effectively connected with a U.S. trade or business.

Effective January 1, 2014, each Fund will be required to withhold U.S. tax (at a 30% rate) on payments of dividends and (effective January 1, 2017) redemption proceeds made to certain non-U.S. entities that fail to comply (or be deemed compliant) with extensive new reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. Shareholders may be requested to provide additional information to a Fund to enable the Fund to determine whether withholding is required.

SHAREHOLDER INFORMATION (continued)

Non-U.S. shareholders are advised to consult their tax advisors with respect to the particular tax consequences to them of an investment in the Funds, including the possible applicability of the U.S. estate tax.

The foregoing discussion summarizes some of the consequences under current U.S. federal income tax law of an investment in a Fund. It is not a substitute for personal tax advice. Consult your own tax advisor about the potential tax consequences of an investment in a Fund under all applicable tax laws.

Mauritian Tax Status. The Subsidiary is wholly-owned by the Market Vectors India Small-Cap Index ETF (for purposes of this section, the Fund) and is a tax resident of Mauritius. The Subsidiary is regulated by the Financial Services Commission in Mauritius (FSC) which has issued a Category 1 Global Business License (GBL 1 License) to the Subsidiary to conduct the business of investment holding under the Financial Services Act 2007. The Subsidiary will apply for a tax residence certificate (TRC) to the Mauritius Revenue Authority (the MRA) through the FSC. The MRA will issue a TRC to the Subsidiary if the Subsidiary provides an undertaking to the MRA that it is and will be centrally managed and controlled in Mauritius.

In order to satisfy the MRA that it is centrally managed and controlled in Mauritius, the Subsidiary must:

- (a) have at all times at least two (2) directors of appropriate caliber and able to exercise independence of mind and judgment, who are ordinarily resident in Mauritius;
- (b) maintain, at all times, its principal bank account in Mauritius;
- (c) keep and maintain, at all times, its accounting records in Mauritius;
- (d) prepare its statutory

financial
statements
and cause its
financial
statements to
be audited in
Mauritius;
and

- (e) have at least
two (2)
directors from
Mauritius
present in
meetings of
directors.

A TRC currently is issued on an annual basis. Under the current provisions of the Income Tax Act 1995 (ITA 95), a Mauritian company is taxed at the rate of fifteen percent on its chargeable income. A company holding a GBL 1 License is entitled to claim a tax credit on foreign source income at a rate which is the higher of:

- (a) the actual
foreign tax
paid
(including if
the Mauritius
company
holds more
than 5% of
the issued
capital of a
company
effecting a
dividend
distribution, a
proportionate
share of the
foreign tax
paid by such
company) on
such income;
or
- (b) a deemed
foreign tax
representing
80% of the
Mauritius tax
on such
income.

Section 2 of ITA 95 defines the term "foreign source income" as income which is not derived from Mauritius. This includes, in the case of a corporation holding a GBL 1 License, income derived from transactions with non-residents. The ITA 95 has an extensive definition of "non-residents". The Fund expects to derive foreign source income only. Therefore, it will pay tax in Mauritius at an effective maximum rate of 3% on its taxable profits.

Under ITA 95, dividends paid to shareholders that do not otherwise derive income from Mauritius are not subject to Mauritius income tax. Moreover, there are no withholding taxes on dividends paid by a Mauritian resident company to its non-resident and resident shareholders. Distributions paid to shareholders following a redemption of shares are not subject to Mauritius income tax provided that the shareholder does not hold its shares in the course of trading activities. There is no Mauritius capital gains tax on the disposal of shares. Profits made from the disposal of securities in the course of trading activities may be liable to income tax at the applicable rate. Under ITA 95, interests paid by a corporation holding a GBL 1 License to non-residents that do not carry on any business in Mauritius are not subject to Mauritius income tax.

Indian Tax Status. The Subsidiary expects to obtain benefits under the tax treaty between Mauritius and India (referred to herein as the "tax treaty.") In light of Circular 789 of April 13, 2000 issued by the Central Board of Direct Taxes in India, the Subsidiary will be eligible for the benefits under the tax treaty if it holds a valid tax residence certificate issued by the Mauritius income tax authorities. The tax treaty may be subject to re-negotiation and there can be no assurance that the terms of the treaty will not be subject to different interpretation. In addition, there is no assurance that the Subsidiary will continue to be deemed a tax resident by Mauritius, allowing it favorable tax treatment. Proposed legislation (2013 Finance Bill) proposes to amend the domestic India tax laws to provide that a valid tax residency certificate shall be necessary but not a sufficient condition to claim tax treaty benefits. While no criterion has been prescribed in the 2013 Finance Bill to determine what constitutes sufficient condition, statements have been made by the Finance Minister that only persons having beneficial ownership of assets would be eligible to claim tax treaty benefits.

Provided that the Subsidiary does not have a permanent establishment in India, the tax treatment in India of income derived by the Subsidiary is as follows:

- i. capital gains are not subject to tax in India by virtue of the tax treaty between India and Mauritius;
- ii. dividends from Indian companies on which dividend distribution tax has been paid are distributed to the

Subsidiary
free of
Indian tax
in the hands
of the
Subsidiary;

98

- iii. any interest income earned on Indian securities is subject to withholding tax in India at the rate of 40%. This rate is reduced to 20% in the case of interest earned on loans provided in non-rupee currency. However if such interest arises out of Foreign Currency Convertible Bonds (FCCBs) held by the Subsidiary then such interest shall be taxed at the rate of 10%. All rates are exclusive of applicable surcharge and education cess.

The Subsidiary will seek to (i) comply with the requirements of the tax treaty, (ii) qualify as a tax resident of Mauritius, (iii) maintain its central management and control in Mauritius and (iv) continue to hold the TRC. Therefore the Fund's management believes that the Subsidiary will be able to obtain the benefits of the tax treaty and benefits to the Fund ultimately. However, there can be no assurance that the Subsidiary will be granted a certificate of tax residency in the future, or that the Indian government will grant benefits under the tax treaty based on the issuance of such certificate. In addition, while the validity of the tax treaty and its applicability to entities such as the Subsidiary was upheld by the Supreme Court of India, no assurance can be given that the terms of the tax treaty will not be subject to re-interpretation and re-negotiation in the future. Any change in the tax treaty's application could have a material adverse affect on the returns of the Fund. Further, it is possible that the Indian tax authorities may take the position that the Subsidiary is not entitled to the benefits of the tax treaty notwithstanding the receipt of a TRC.

It is currently not clear whether income from entities such as the Subsidiary will be classified as capital gains income or as business income under Indian law. However, this distinction should not affect the ultimate tax consequences to the Subsidiary or the Fund. Under the tax treaty, capital gains from investment in Indian securities and depositary receipts issued with respect to Indian companies are exempt from tax, provided that the Subsidiary does not have a permanent establishment in India. Similarly, business income is not chargeable to tax in India under the treaty so long as the Subsidiary does not have a permanent establishment in India. The Subsidiary expects that it will be considered a tax resident of Mauritius and does not expect to be deemed to have a permanent establishment in India. If the Subsidiary were deemed to have such a permanent establishment, income attributable to that permanent establishment could be taxable in India at a rate of up to 40%.

In the event that the benefits of the treaty are not available to the Subsidiary, or the Subsidiary is held to have a permanent establishment in India, taxation of interest and dividend income of the Subsidiary would be the same as described above. The taxation of capital gains would be as under:

- i. capital gains from the sale

of listed
Indian
securities
held for
twelve
months or
less will be
taxed as
short-term
capital gains
at the rate of
15%,
provided the
STT (as
discussed
below) has
been paid;

ii. capital gains
from the sale
of listed
Indian
securities
held for
more than
twelve
months will
be exempt
from tax in
India
provided the
STT has
been paid;

iii. capital gains
from the sale
of listed
Indian
securities not
executed on
the stock
exchange or
unlisted
securities
held for
twelve
months or
less will be
taxed at the
rate of 30%
and those

held for more than twelve months shall be taxed at the rate of 10%;

- iv. capital gains arising from the transfer of FCCBs, GDRs or ADRs outside India between non-resident investors, will not be subject to tax in India;
- v. gains from the disposal of shares acquired on redemption of GDRs or ADRs are treated as short-term if such shares are held for less than or equal to 12 months prior to disposal and long-term if such shares are held for more than 12 months prior to disposal. Short-term gains will be taxed at the rate of 15% provided STT (as discussed

below) has
been paid.
Long-term
gains will be
exempt from
tax if STT
has been
paid.

Regardless of the application of the treaty, all transactions entered on a recognized stock exchange in India are subject to the Securities Transaction Tax (STT), which is levied on the value of a transaction at rates not exceeding 0.125%. The STT can be set off against business income tax calculated under the Indian Income Tax Act, provided that the gains on the transactions subject to the STT are taxed as business income and not as capital gains. In the event the benefits of the Treaty are not available to the Subsidiary and the Subsidiary is held to have a permanent establishment (PE) in India, then the Subsidiary may be subject to Indian Mauritian Alternative Tax (MAT). If the MAT does apply, and the Indian income tax payable by the Subsidiary is less than 18.5% of its book profits, then the Subsidiary would be deemed to owe taxes of 18.5% of book profits. Such a fee would not be included in the fee charged by the Adviser. Long-term capital gains on the sale of listed securities are included in the definition of book profits for the purposes of calculating MAT.

Please note that the above description is based on current provisions of Mauritius and Indian law, and any change or modification made by subsequent legislation, regulation, or administrative or judicial decision could increase the Indian tax liability of the Subsidiary and thus reduce the return to Fund shareholders.

SHAREHOLDER INFORMATION (continued)

INDEX PROVIDERS

The Africa Titans 50 Index and GCC Titans 40 Index are published by Dow Jones Indexes (Dow Jones). The Brazil Small-Cap Index, Colombia Index, Egypt Index, Germany Small-Cap Index, India Small-Cap Index, Indonesia Index, Indonesia Small-Cap Index, LatAm Small-Cap Index, Poland Index, Russia Index, Russia Small-Cap Index and Vietnam Index are published by Market Vectors Index Solutions GmbH (MVIS), which is a wholly owned subsidiary of the Adviser.

Dow Jones and MVIS are referred to herein as the Index Providers. The Index Providers do not sponsor, endorse, or promote the Funds and bear no liability with respect to the Funds or any security.

100

The Africa Titans 50 Index is a rules based index intended to give investors a means of tracking the overall performance of companies that are domiciled in Africa, primarily listed on an exchange in Africa, or that generate at least 50% of their revenues in Africa. The Africa Titans 50 Index is a modified capitalization weighted, float adjusted index comprised of publicly traded companies headquartered in Africa and companies generating the majority of their revenues in Africa.

Constituent stocks of the Africa Titans 50 Index must have a market capitalization of greater than \$200 million on a rebalancing date to be added to the Africa Titans 50 Index. Stocks whose market capitalizations fall below \$100 million as of any rebalancing date will be deleted from the Africa Titans 50 Index. Stocks must have a twelve-month average daily turnover greater than \$1 million to be included in the Africa Titans 50 Index. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Securities Exchange Act of 1934, as amended (the Exchange Act)). Similar criteria and standards apply to stocks with foreign listings.)

As of December 31, 2012, the Africa Titans 50 Index included 50 securities of companies with a market capitalization range of between approximately \$419 million and \$71.6 billion and a weighted average market capitalization of \$12.4 billion. These amounts are subject to change.

The Africa Titans 50 Index is calculated and maintained by Dow Jones Indexes. Index values are calculated between the hours of approximately 6:00 p.m. (New York time) and 5:59 p.m. (New York time) Sunday through Friday. Index values are disseminated every 15 seconds.

The Africa Titans 50 Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to ensure compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Africa Titans 50 Index is reconstituted annually, at the close of business on the third Friday of each June, and companies are added and/or deleted based upon the Africa Titans 50 Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the Africa Titans 50 Index on any quarterly rebalancing date, provided the companies meet all eligibility criteria and have been trading for more than 10 trading days. The share weights of the Africa Titans 50 Index components are adjusted on each quarterly rebalancing date.

Rebalancing data, including constituent weights and related information, is posted on the Index's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Africa Titans 50 Index is issued on the Wednesday prior to a rebalancing date. Share weights of the constituents remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® BRAZIL SMALL-CAP INDEX

The Brazil Small-Cap Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small-cap companies that are incorporated in Brazil or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Brazil. In exceptional cases, companies with less than 50% of their revenues derived from Brazil may be eligible for inclusion in the Brazil Small-Cap Index.

The universe of small-capitalization companies that may be included in the Brazil Small-Cap Index is determined on the basis of such companies' relative market capitalization as compared to the full market capitalization of local companies. The Brazil Small-Cap Index generally only includes Brazilian companies ranking in the bottom 90-98% of the full market capitalization of local Brazilian companies, but may also include companies whose market capitalization falls outside of this range but within the bottom 15% of companies ranked by market capitalization.

Constituent stocks of the Brazil Small-Cap Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Brazil Small-Cap Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Brazil Small-Cap Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Brazil Small-Cap Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the Brazil Small-Cap Index included 71 securities of companies with a market capitalization range of between approximately \$212 million and \$4.4 billion and a weighted average market capitalization of \$1.7 billion. These amounts are subject to change.

The Brazil Small-Cap Index is the exclusive property of Market Vectors Index Solutions GmbH (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Brazil Small-Cap Index. Structured Solutions AG uses its best efforts to ensure that the Brazil Small-Cap Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Brazil Small-Cap Index to third parties. Market Vectors Brazil Small-Cap ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in Market Vectors Brazil Small-Cap ETF. Brazil Small-Cap Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Brazil Small-Cap Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Brazil Small-Cap Index is reconstituted quarterly, at the close of business on the third Friday in a quarter-end month (*i.e.*, March, June, September and December) and companies are added and/or deleted based upon the Brazil Small-Cap Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the Brazil Small-Cap Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Brazil Small-Cap Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Brazil Small-Cap Index is issued on the Friday prior to a rebalancing date. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® COLOMBIA INDEX

The Colombia Index is a rules-based index intended to give investors a means of tracking the overall performance of companies incorporated in Colombia or generating at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Colombia. The Colombia Index is a modified capitalization-weighted, float-adjusted index comprised of publicly traded companies incorporated in Colombia or companies generating at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Colombia. In exceptional cases, companies with less than 50% of their revenues derived from Colombia may be eligible for inclusion in the Colombia Index.

The universe of companies that may be included in the Colombia Index is determined on the basis of such companies relative market capitalization as compared to the free-float market capitalization of the investable universe. The Colombia Index generally only includes Colombian companies ranking in the top 85% of the free-float market capitalization of all Colombian companies. Existing components between the 85th and 100th percentiles also qualify for the Colombia Index. If the coverage is still below 90% or the number in the index is below 21 companies, then the largest remaining stocks are selected until coverage of at least 90% is reached and the number of stocks equals 21.

Constituent securities of the Colombia Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be added to the Colombia Index. Securities whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will be deleted from the Colombia Index. Securities must have a three-month average daily turnover greater than \$1 million to be included in the Colombia Index and issuers of such securities must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international securities exchange may qualify (*e.g.*, National Stock Market securities must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to securities with foreign listings).

As of December 31, 2012, the Colombia Index included 26 securities of companies with a market capitalization range of between approximately \$138 million and \$122.7 billion and a weighted average market capitalization of \$15.6 billion.

The Colombia Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Colombia Index. Structured Solutions AG uses its best efforts to ensure that the Colombia Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Colombia Index to third parties. Market Vectors Colombia ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in Market Vectors Colombia ETF. Colombia Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Colombia Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Colombia Index is reconstituted quarterly, at the close of business on the third Friday of each quarter-end month, and companies are added and/or deleted based upon the Colombia Index eligibility criteria. Companies with recent securities exchange listings, *i.e.*, recent initial public offerings, may be added to the Colombia Index on any quarterly rebalancing date, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Colombia Index components are adjusted on each quarterly rebalancing date.

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Colombia Index is issued on the second Friday prior to a rebalancing date. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® EGYPT INDEX

The Egypt Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded companies that are incorporated in Egypt or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Egypt. In exceptional cases, companies with less than 50% of their revenues derived from Egypt may be eligible for inclusion in the Egypt Index.

The universe of companies that may be included in the Egypt Index is determined on the basis of such companies relative market capitalization as compared to the free-float market capitalization of all the investable universe. The Egypt Index generally only includes Egyptian companies ranking in the top 85% of the free-float market capitalization of all Egyptian companies. Existing components between the 85th and 100th percentiles also qualify for the Egypt Index. If the coverage is still below 90% or the number in the Egypt Index is below 25 companies, then the largest remaining stocks are selected until coverage of at least 90% is reached and the number of stocks equals 25.

Constituent stocks of the Egypt Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Egypt Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Egypt Index. Stocks must have a three-month average daily trading volume of at least \$1 million to be eligible for the Egypt Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the Egypt Index included 25 securities of companies with a market capitalization range of between approximately \$108 million and \$8.3 billion and a weighted average market capitalization of \$2.0 billion. These amounts are subject to change.

The Egypt Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Egypt Index. Structured Solutions AG uses its best efforts to ensure that the Egypt Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Egypt Index to third parties. Market Vectors Egypt ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in Market Vectors Egypt ETF. Egypt Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Egypt Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Egypt Index is reconstituted quarterly, at the close of business on the third Friday in a quarter-end month (*i.e.*, March, June, September and December) and companies are added and/or deleted based upon the Egypt Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Egypt Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Egypt Index is issued on the Friday prior to a rebalancing date. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® GERMANY SMALL-CAP INDEX

The Germany Small-Cap Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small-capitalization companies that are incorporated in Germany or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Germany. In exceptional cases, companies with less than 50% of their revenues derived from Germany may be eligible for inclusion in the Germany Small-Cap Index.

The universe of small-capitalization companies that may be included in the Germany Small-Cap Index is determined on the basis of such companies' relative market capitalization as compared to the full market capitalization of local companies. The Germany Small-Cap Index generally only includes German companies ranking in the bottom 90-98% of the full market capitalization of local German companies, but may also include companies whose market capitalization falls outside of this range but within the bottom 15% of companies ranked by market capitalization.

Constituent stocks of the Germany Small-Cap Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Germany Small-Cap Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Germany Small-Cap Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Germany Small-Cap Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 30, 2012, the Germany Small-Cap Index included 82 securities of companies with a market capitalization range of between approximately \$99 million and \$4.2 billion with a weighted average market capitalization of \$1.9 billion. These amounts are subject to change.

The Germany Small-Cap Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Germany Small-Cap Index. Structured Solutions AG uses its best efforts to ensure that the Germany Small-Cap Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Germany Small-Cap Index to third parties. Market Vectors Germany Small-Cap ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in Market Vectors Germany Small-Cap ETF. Germany Small-Cap Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Germany Small-Cap Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Germany Small-Cap Index is reconstituted quarterly, at the close of business on the third Friday in a quarter- end month (*i.e.*, March, June, September and December) and companies are added and/or deleted based upon the Germany Small-Cap Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the Germany Small-Cap Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Germany Small-Cap Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Germany Small-Cap Index is issued on the second Friday in a quarter- end month. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

DOW JONES GCC TITANS 40 INDEXSM

The GCC Titans 40 Index is a rules based index intended to give investors a means of tracking the overall performance of companies either domiciled in countries belonging to the GCC, primarily listed on an exchange in countries belonging to the GCC, or generating at least 50% of their revenues in countries belonging to the GCC. The GCC Titans 40 Index is a modified capitalization weighted, float adjusted index comprised of publicly traded companies headquartered in the GCC, *i.e.*, in Bahrain, Kuwait, Oman, Qatar and UAE (if new countries are approved to the GCC, they will also be added to the GCC Titans 40 Index) and companies generating the majority of their revenues in Bahrain, Kuwait, Oman, Qatar and UAE (these markets have to be open for foreign investment in order to be eligible).

Constituent stocks of the GCC Titans 40 Index must have a market capitalization of greater than \$100 million on a rebalancing date to be added to the GCC Titans 40 Index. Stocks whose market capitalizations fall below \$75 million as of any rebalancing date will be deleted from the GCC Titans 40 Index. Stocks must have a twelve-month average daily turnover greater than \$1 million to be included in the GCC Titans 40 Index. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the GCC Titans 40 Index included 40 securities of companies with a market capitalization range of between approximately \$353 million and \$25.2 billion and a weighted average market capitalization of \$7.5 billion. These amounts are subject to change.

The GCC Titans 40 Index is calculated and maintained by Dow Jones Indexes. Index values are calculated between the hours of approximately 6:00 p.m. (New York time) and 5:59 p.m. (New York time) Sunday through Friday. Index values are disseminated every 15 seconds.

The GCC Titans 40 Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to ensure compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The GCC Titans 40 Index is reconstituted annually, at the close of business on the third Friday of each June, and companies are added and/or deleted based upon the GCC Titans 40 Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the GCC Titans 40 Index on any quarterly rebalancing date, provided the companies meet all eligibility criteria and have been trading for more than 10 trading days. The share weights of the GCC Titans 40 Index components are adjusted on each quarterly rebalancing date.

Rebalancing data, including constituent weights and related information, is posted on the Index's web site prior to the start of trading on the first business day following the third Wednesday of the calendar quarter. A press announcement identifying additions and deletions to the GCC Titans 40 Index is issued on the Tuesday prior to a rebalancing date. Share weights of the constituents remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® INDIA SMALL-CAP INDEX

The India Small-Cap Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small-cap companies that are incorporated in India or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in India. In exceptional cases, companies with less than 50% of their revenues derived from India may be eligible for inclusion in the India Small-Cap Index.

The universe of small-capitalization companies that may be included in the India Small-Cap Index is determined on the basis of such companies' relative market capitalization as compared to the full market capitalization of all local companies. The Indian Small-Cap Index generally only includes Indian companies ranking in the bottom 90-98% of the full market capitalization of local Indian companies, but may also include companies whose market capitalization falls outside of this range but within the bottom 15% of companies ranked by market capitalization.

Constituent stocks of the India Small-Cap Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the India Small-Cap Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the India Small-Cap Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the India Small-Cap Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the India Small-Cap Index included 99 securities of companies with a market capitalization range of between approximately \$76 million and \$1.1 billion and a weighted average market capitalization of \$508 million. These amounts are subject to change.

The India Small-Cap Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the India Small-Cap Index. Structured Solutions AG uses its best efforts to ensure that the India Small-Cap Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the India Small-Cap Index to third parties. Market Vectors India Small-Cap ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in Market Vectors India Small-Cap ETF. India Small-Cap Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The India Small-Cap Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The India Small-Cap Index is reconstituted quarterly, at the close of business on the third Friday in a quarter-end month (*i.e.*, March, June, September and December) and companies are added and/or deleted based upon the India Small-Cap Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the India Small-Cap Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the India Small-Cap Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the India Small-Cap Index is issued on the Friday prior to a rebalancing date. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® INDONESIA INDEX

The Indonesia Index is a rules based index intended to give investors a means of tracking the overall performance of publicly traded companies that are incorporated in Indonesia or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Indonesia. The Indonesia Index is a modified capitalization weighted, float adjusted index comprised of publicly traded companies that are incorporated in Indonesia or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Indonesia. In exceptional cases, companies with less than 50% of their revenues derived from Indonesia may be eligible for inclusion in the Indonesia Index.

The universe of companies that may be included in the Indonesia Index is determined on the basis of such companies relative market capitalization as compared to the free-float market capitalization of the investable universe. The Indonesia Index generally only includes Indonesian companies ranking in the top 85% of the free-float market capitalization of all Indonesian companies. Existing components between the 85th and 100th percentiles also qualify for the Indonesia Index. If the coverage is still below 90% or the number in the Indonesia Index is below 25 companies, then the largest remaining stocks are selected until coverage of at least 90% is reached and the number of stocks equals 25.

Constituent stocks of the Indonesia Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Indonesia Index. Stocks whose market capitalizations fall below \$100 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Indonesia Index. Stocks must have a three month average daily trading volume value of at least \$1 million to be eligible for the Indonesia Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the Indonesia Index included 40 securities of companies with a market capitalization range of between approximately \$121 million and \$31.9 billion and a weighted average market capitalization of \$12.6 billion. These amounts are subject to change.

The Indonesia Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Indonesia Index. Structured Solutions AG uses its best efforts to ensure that the Indonesia Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Indonesia Index to third parties. Market Vectors Indonesia ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in the Market Vectors Indonesia ETF. Indonesia Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Indonesia Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Indonesia Index is reconstituted quarterly, at the close of business on the third Friday in a quarter end month (*i.e.*, March, June, September and December) and companies are added and/or deleted based upon the Indonesia Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the Indonesia Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Indonesia Index components are adjusted also on a quarterly basis (every third Friday in a quarter end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press

announcement identifying additions and deletions to the Indonesia Index is issued on the Friday prior to a rebalancing date. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

108

MARKET VECTORS® INDONESIA SMALL-CAP INDEX

The Indonesia Small-Cap Index is a rules-based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small-capitalization companies that are incorporated in Indonesia or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Indonesia. In exceptional cases, companies with less than 50% of their revenues derived from Indonesia may be eligible for inclusion in the Indonesia Small-Cap Index.

The universe of small-capitalization companies that may be included in the Indonesia Small-Cap Index is determined on the basis of such companies' relative market capitalization as compared to the full market capitalization of local companies. The Indonesia Small-Cap Index generally only includes Indonesian companies ranking in the bottom 90-98% of the range of full market capitalizations of local Indonesian companies, but may also include companies whose market capitalization falls outside of this range but within the bottom 15% of companies ranked by market capitalization.

Constituent stocks of the Indonesia Small-Cap Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Indonesia Small-Cap Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Indonesia Small-Cap Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Indonesia Small-Cap Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of the date of this December 31, 2012, the Indonesia Small-Cap Index included 24 securities of companies with a market capitalization range of between approximately \$101 million and \$1.16 billion and a weighted average market capitalization of \$542 million. These amounts are subject to change.

The Indonesia Small-Cap Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Indonesia Small-Cap Index. Structured Solutions AG uses its best efforts to ensure that the Indonesia Small-Cap Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Indonesia Small-Cap Index to third parties. Market Vectors Indonesia Small-Cap ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in the Market Vectors Indonesia Small-Cap ETF. Indonesia Small-Cap Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Indonesia Small-Cap Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Indonesia Small-Cap Index is reconstituted quarterly, at the close of business on the third Friday of each quarter-end month, and companies are added and/or deleted based upon the Indonesia Small-Cap Index eligibility criteria. Companies with recent securities exchange listings (*i.e.*, recent initial public offerings) may be added to the Indonesia Small-Cap Index on any quarterly rebalancing date provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Index components are adjusted on each quarterly rebalancing date.

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Indonesia Small-Cap Index is issued on the Friday prior to a rebalancing date. Targeted share weights of the constituents remain constant between quarters except in the event of

certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® LATIN AMERICA SMALL-CAP INDEX

The LatAm Small-Cap Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small-cap companies that are incorporated in the Latin American region or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in the Latin American region. In exceptional cases, companies with less than 50% of their revenues derived from the Latin American region may be eligible for inclusion in the LatAm Small-Cap Index.

The universe of small-capitalization companies that may be included in the LatAm Small-Cap Index is determined on the basis of such companies' relative market capitalization as compared to the full market capitalization of local companies. The LatAm Small-Cap Index generally only includes Latin American companies ranking in the bottom 90-98% of the full market capitalization of local Latin American companies, but may also include companies whose market capitalization falls outside of this range but within the bottom 15% of companies ranked by market capitalization.

Constituent stocks of the LatAm Small-Cap Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the LatAm Small-Cap Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the LatAm Small-Cap Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the LatAm Small-Cap Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the LatAm Small-Cap Index included 144 securities of companies with a market capitalization range of between approximately \$107 million and \$4.4 billion and a weighted average market capitalization of \$1.2 billion. These amounts are subject to change.

The LatAm Small-Cap Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the LatAm Small-Cap Index. Structured Solutions AG uses its best efforts to ensure that the LatAm Small-Cap Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the LatAm Small-Cap Index to third parties. Market Vectors Latin America Small-Cap ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in Market Vectors Latin America Small-Cap ETF. LatAm Small-Cap Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The LatAm Small-Cap Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The LatAm Small-Cap Index is reconstituted quarterly, at the close of business on the third Friday in a quarter-end month (*i.e.*, March, June, September and December) and companies are added and/or deleted based upon the LatAm Small-Cap Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the LatAm Small-Cap Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the LatAm Small-Cap Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the LatAm Small-Cap Index is issued on the Friday prior to a rebalancing date. Target share weights of the constituents remain constant between quarters except in the event of

certain types of corporate actions, including stock splits and reverse stock splits.

110

MARKET VECTORS® POLAND INDEX

The Poland Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded companies that are incorporated in Poland or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Poland. In exceptional cases, companies with less than 50% of their revenues derived from Poland may be eligible for inclusion in the Poland Index.

The universe of companies that may be included in the Poland Index is determined on the basis of such companies relative market capitalization as compared to the free-float market capitalization of the investable universe. The Poland Index generally only includes Polish companies ranking in the top 85% of the free-float market capitalization of all Polish companies. Existing components between the 85th and 100th percentiles also qualify for the Poland Index. If the coverage is still below 90% or the number in the Poland Index is below 25 companies, then the largest remaining stocks are selected until coverage of at least 90% is reached and the number of stocks equals 25.

Constituent stocks of the Poland Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Poland Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Poland Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Poland Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the Poland Index included 28 securities of companies with a market capitalization range of between approximately \$107 million and \$14.9 billion and a weighted average market capitalization of \$7.3 billion. These amounts are subject to change.

The Poland Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Poland Index. Structured Solutions AG uses its best efforts to ensure that the Poland Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Poland Index to third parties. Market Vectors Poland ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in Market Vectors Poland ETF. Poland Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Poland Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to ensure compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Poland Index is reconstituted quarterly, at the close of business on the third Friday in a quarter-end month (*i.e.*, March, June, September and December) and companies are added and/or deleted based upon the Poland Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the Poland Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Poland Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Poland Index is issued on the Friday prior to a rebalancing date. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® RUSSIA INDEX

The Russia Index is a rules-based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publically traded companies that are incorporated in Russia or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Russia. In exceptional cases, companies with less than 50% of their revenues derived from Russia may be eligible for inclusion in the Russia Index.

The universe of companies that may be included in the Russia Index is determined on the basis of such companies relative market capitalization as compared to the free-float market capitalization of all the investable universe. The Russia Index generally only includes Russian companies ranking in the top 85% of the free-float market capitalization of all Russian companies. Existing components between the 85th and 100th percentiles also qualify for the Russia Index. If the coverage is still below 90% or the number in the Russia Index is below 25 companies, then the largest remaining stocks are selected until coverage of at least 90% is reached and the number of stocks equals 25.

Constituent stocks of the Russia Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Russia Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Russia Index. Stocks must have a three-month average trading volume value of at least \$1 million to be eligible for the Russia Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria apply to stocks with foreign listings).

As of December 31, 2012, the Russia Index included 45 securities of companies with a market capitalization range of between approximately \$1.1 billion and \$112.0 billion and a weighted average market capitalization of \$36.1 billion. These amounts are subject to change.

The Russia Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Russia Index. Structured Solutions AG uses its best efforts to ensure that the Russia Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Russia Index to third parties. Market Vectors Russia ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in the Market Vectors Russia ETF. Russia Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Russia Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Russia Index is reconstituted quarterly, at the close of business on the third Friday of each quarter end month, and companies are added and/or deleted based upon the Russia Index eligibility criteria. Companies with recent securities exchange listings (*i.e.*, recent initial public offerings) may be added to the Russia Index on any quarterly rebalancing date provided the companies meet all eligibility criteria and have been trading for more than 30 trading days.

The share weights of the Russia Index components are also adjusted on a quarterly basis (every third Friday in a quarter-end month). Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Russia Index is issued on the second Friday in a quarter-end month. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® RUSSIA SMALL-CAP INDEX

The Russia Small-Cap Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of publicly traded small capitalization companies that are incorporated in Russia or that generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Russia. In exceptional cases, companies with less than 50% of their revenues derived from Russia may be eligible for inclusion in the Russia Small-Cap Index.

The universe of small-capitalization companies that may be included in the Russia Small-Cap Index is determined on the basis of such companies' relative market capitalization as compared to the full market capitalization of local companies. The Russia Small-Cap Index generally only includes Russian companies ranking in the bottom 90-98% of the full market capitalization of local Russian companies, but may also include companies whose market capitalization falls outside of this range but within the bottom 20% of companies ranked by market capitalization.

Constituent stocks of the Russia Small-Cap Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Russia Small-Cap Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Russia Small-Cap Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Russia Small-Cap Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the Russia Small-Cap Index included 27 securities of companies with a market capitalization range of between approximately \$159 million and \$16.1 billion with a weighted average market capitalization of \$2.6 billion. These amounts are subject to change.

The Russia Small-Cap Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Russia Small-Cap Index. Structured Solutions AG uses its best efforts to ensure that the Index is calculated correctly. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® VIETNAM INDEX

The Vietnam Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors exposure to Vietnam. As of December 31, 2012, approximately 74% of the market capitalization of the Vietnam Index was composed of securities of companies which are incorporated in Vietnam or which generate at least 50% of their revenues (or, in certain circumstances, have at least 50% of their assets) in Vietnam. The remaining securities included in the Vietnam Index consist of companies that (i) are expected to generate at least 50% of their revenues in Vietnam or (ii) demonstrate a significant and/or dominant position in the Vietnamese market and are expected to grow.

The universe of companies that may be included in the Vietnam Index is determined on the basis of such companies relative market capitalization as compared to the free-float market capitalization of the investable universe. The Vietnam Index generally only includes Vietnamese companies ranking in the top 85% of the free-float market capitalization of all Vietnamese companies. Existing components between the 85th and 100th percentiles also qualify for the Vietnam Index. If the coverage is still below 90% or the number in the index is below 25 companies, then the largest remaining stocks are selected until coverage of at least 90% is reached and the number of stocks equals 25.

Constituent stocks of the Vietnam Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Vietnam Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Vietnam Index. Stocks must have a three-month average daily turnover greater than \$1 million to be eligible for the Vietnam Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the Vietnam Index included 25 securities of companies with a market capitalization range of between approximately \$95 million and \$41.7 billion and a weighted average market capitalization of \$3.3 billion. These amounts are subject to change.

The Vietnam Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Index. Structured Solutions AG uses its best efforts to ensure that the Vietnam Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Vietnam Index to third parties. Market Vectors Vietnam ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in Market Vectors Vietnam ETF. Vietnam Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Vietnam Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Vietnam Index is reconstituted quarterly, at the close of business on the third Friday in a quarter-end month (*i.e.*, March, June, September and December) and companies are added and/or deleted based upon the Vietnam Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the Vietnam Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Vietnam Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Vietnam Index is issued on the Friday prior to a rebalancing date. Target share weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

FINANCIAL HIGHLIGHTS

The financial highlights tables which follow are intended to help you understand the Funds' financial performance since each Fund's inception. Certain information reflects financial results for a single Fund share. The total returns in the table represent that rate that an investor would have earned (or lost) on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information has been audited by Ernst & Young LLP, the Trust's independent registered public accounting firm, whose report, along with the Funds' financial statements, are included in the Funds' Annual Report, which is available upon request.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often the Shares of each Fund traded on NYSE Arca at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund during the past four calendar quarters, as applicable, can be found at www.marketvectorsetfs.com.

GENERAL INFORMATION

CONTINUOUS OFFERING

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Trust on an ongoing basis, at any point a distribution, as such term is used in the Securities Act may occur. Broker dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker dealers who are not underwriters but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an unsold allotment within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on NYSE Arca is satisfied by the fact that the prospectus is available at NYSE Arca upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

OTHER INFORMATION

The Trust was organized as a Delaware statutory trust on March 15, 2001. Its Declaration of Trust currently permits the Trust to issue an unlimited number of Shares of beneficial interest. If shareholders are required to vote on any matters, each Share outstanding would be entitled to one vote. Annual meetings of shareholders will not be held except as required by the 1940 Act and other applicable law. See the Funds' SAI for more information concerning the Trust's form of organization. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of a Fund. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into an agreement with the Funds.

Dechert LLP serves as counsel to the Trust, including the Funds. Ernst & Young LLP serves as the Trust's independent registered public accounting firm and will audit the Fund's financial statements annually.

ADDITIONAL INFORMATION

This Prospectus does not contain all the information included in the Registration Statement filed with the SEC with respect to the Funds' Shares. MARKET VECTORS AGRIBUSINESS ETF**SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

Market Vectors Agribusiness ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Global Agribusiness Index (the Agribusiness Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.05 %
Total Annual Fund Operating Expenses ^(a)	0.55 %
Fee Waivers and Expense Reimbursement ^(a)	0.00 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.55 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense,

offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.56% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 56
3	\$ 176
5	\$ 307
10	\$ 689

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 19% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Agribusiness Index is comprised of equity securities of companies that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to): (i) agri-chemicals and fertilizers, seeds and traits, (ii) farm/irrigation equipment and farm machinery and/or (iii) agricultural products (including grain, tobacco, meat, poultry and sugar), aquaculture and fishing, livestock, plantations and trading of agricultural products. Such companies may include medium-capitalization companies and foreign and emerging market issuers. As of December 31, 2012, the Agribusiness Index included 53 securities of

MARKET VECTORS AGRIBUSINESS ETF (continued)

companies with a market capitalization range of between approximately \$382 million and \$50.6 billion and a weighted average market capitalization of \$20.4 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Agribusiness Index by investing in a portfolio of securities that generally replicates the Agribusiness Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Agribusiness Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Agribusiness Index concentrates in an industry or group of industries. As of December 31, 2012, the Agribusiness Index was concentrated in each of the basic materials and consumer staples sectors and the industrials sector represented a significant portion of the Agribusiness Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in Agriculture Investments. Economic forces, including forces affecting the agricultural commodity, energy and financial markets, as well as government policies and regulations affecting the agricultural sector and related industries, could adversely affect the Fund's portfolio companies and, thus, the Fund's financial situation and profitability. Agricultural production and trade flows are significantly affected by government policies and regulations. In addition, the Fund's portfolio companies must comply with a broad range of environmental laws and regulations which could adversely affect the Fund. Additional or more stringent environmental laws and regulations may be enacted in the future and such changes could have a material adverse effect on the business of the Fund's portfolio companies.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the Agribusiness Index is concentrated in the basic materials sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Staples Sector. The consumer staples sector includes, among others, manufacturers and distributors of food, beverages and tobacco, food and drug retailers and products of non-durable household goods and consumer products. Because as currently constituted the Agribusiness Index is concentrated in the consumer staples sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the consumer staples sector. These companies may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the Agribusiness Index, the Fund will be sensitive to changes in, and its performance may depend on to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Agribusiness Index, may negatively affect the Fund's ability to replicate the performance of the Agribusiness Index.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Agribusiness Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Agribusiness Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Agribusiness Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the Agribusiness Index, the Fund's return may deviate significantly from the return of the Agribusiness Index. In addition, the Fund may not be able to invest in certain securities included in the Agribusiness Index, or invest in them in the exact proportions they represent of the Agribusiness Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Agribusiness Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Agribusiness Index is not based on fair value prices), the Fund's ability to track the Agribusiness Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Agribusiness Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower

than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

MARKET VECTORS AGRIBUSINESS ETF (continued)

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Agribusiness Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Agribusiness Index, the Fund's assets are concentrated in the basic materials and consumer staples sectors; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on those sectors will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year, five years and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 26.43% 3Q 10

Worst Quarter: -40.15% 3Q 08

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Prior to March 15, 2013, the Fund sought to replicate an index called DAX Global® Agribusiness Index.

	Past One Year	Past Five Years	Since Inception (8/31/2007)
Market Vectors Agribusiness ETF (return before taxes)	14.20 %	-0.37 %	5.95 %
Market Vectors Agribusiness ETF (return after taxes on distributions)	13.48 %	-0.72 %	5.60 %
Market Vectors Agribusiness ETF (return after taxes on distributions and sale of Fund Shares)	9.23 %	-0.53 %	4.93 %
DAXglobal® Agribusiness Index (reflects no deduction for fees, expenses or taxes)	13.22 %	-0.23 %	6.29 %
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	16.00 %	1.66 %	1.61 %

PORTFOLIO MANAGEMENT

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

4

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	August 2007
George Cao	Portfolio Manager	December 2007

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 55 of this Prospectus.

MARKET VECTORS COAL ETF**INVESTMENT OBJECTIVE**

Market Vectors Coal ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Global Coal Index (the Coal Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.12 %
Total Annual Fund Operating Expenses ^(a)	0.62 %
Fee Waivers and Expense Reimbursement ^(a)	0.03 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.59 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.59% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 60
3	\$ 196
5	\$ 343
10	\$ 771

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 55% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Coal Index is comprised of companies that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to): coal operation (production and mining), coal transportation and production of coal mining equipment as well as coal storage. Such companies may include medium-capitalization companies and foreign and emerging market issuers, including Chinese issuers. As of December 31, 2012, the Coal Index included 33 securities of companies with a market capitalization range of between approximately \$269 million and \$87.1 billion and a weighted average market capitalization of \$11.7 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Coal Index by investing in a portfolio of securities that generally replicates the Coal Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Coal Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Coal Index concentrates in an industry or group of industries. As of December 31, 2012, the Coal Index was concentrated in the energy sector and the mining industry and each of the basic materials and the industrials sectors represented a significant portion of the Coal Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Coal Industry. The profitability of companies in the coal industry is related to worldwide energy prices, exploration and production spending. Such companies also are subject to risks of changes in exchange rates, international politics and government regulation, world events, terrorist attacks, depletion of resources and economic conditions, reduced demand as a result of increases in energy efficiency and energy conservation, as well as market, economic and political risks of the countries where energy companies are located or do business. Coal exploration and mining can be significantly affected by natural disasters. In addition, coal companies may be at risk for environmental damage claims and are subject to extensive federal, state and local environmental laws and regulations regarding air emissions and the disposal of hazardous materials.

A primary risk of the coal industry is the competitive risk associated with the prices of alternative fuels, such as natural gas and oil. For example, consumers of coal often have the ability to switch between the use of coal, oil or natural gas. As a result, during periods when competing fuels are less expensive, the revenues of companies in the coal industry may decline with a corresponding impact on earnings.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the Coal Index is concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Mining Industry. The mining industry includes companies that primarily produce, process, extract, or distribute precious or basic metals or minerals. Because as currently constituted the Coal Index is concentrated in the mining industry, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the mining industry. Competitive pressures may have a significant effect on the financial condition of such companies. Mining companies are highly dependent on the price of the underlying metal or element. These prices may fluctuate substantially over short periods of time so the Fund's Share price may be more volatile than other types of investments.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Coal Index, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the Coal Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and

MARKET VECTORS COAL ETF (continued)

economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Special Risk Considerations of Investing in Chinese Issuers. A significant portion of the Coal Index is comprised of securities of Chinese issuers, including issuers located outside of China that generate significant revenues from China, involves additional risks, including, but not limited to: the economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, interest rates, allocation of resources and capital reinvestment, among others; the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership; and actions of the Chinese central and local government authorities continue to have a substantial effect on economic conditions in China. In addition, previously the Chinese government has from time to time taken actions that influence the prices at which certain goods may be sold, encourage companies to invest or concentrate in particular industries, induce mergers between companies in certain industries and induce private companies to publicly offer their securities to increase or continue the rate of economic growth, control the rate of inflation or otherwise regulate economic expansion. It may do so in the future as well, potentially having a significant adverse effect on economic conditions in China, the economic prospects for, and the market prices and liquidity of, securities issued by Chinese issuers. In addition, investment and trading restrictions make it difficult for non-Chinese investors to directly access securities issued by Chinese issuers. These restrictions may impact the availability, liquidity, and pricing of certain securities issued by Chinese issuers. Additionally, the Chinese government maintains strict currency controls and regularly intervenes in the currency market. The Chinese government's actions may not be transparent or predictable. As a result, the value of the Renminbi may change quickly and arbitrarily. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Coal Index, may negatively affect the Fund's ability to replicate the performance of the Coal Index.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of

medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions partially for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Coal Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Coal Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Coal Index and raising cash to meet redemptions or deploying cash with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the Coal Index, the Fund's return may deviate significantly from the return of the Coal Index. In addition, the Fund may not be able to invest in certain securities included in the Coal Index, or invest in them in the exact proportions they represent of the Coal Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Coal Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Coal Index is not based on fair value prices), the Fund's ability to track the Coal Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Coal Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Coal Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Coal Index, the Fund's assets are concentrated in the energy sector and the mining industry; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector and industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

MARKET VECTORS COAL ETF (continued)**Annual Total Returns Calendar Years**

Best Quarter: 67.80% 2Q 09

Worst Quarter: -34.66% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Prior to September 21, 2012, the Fund sought to replicate an index called the Stowe Global Coal IndexSM.

	Past One Year	Since Inception (1/10/2008)
Market Vectors Coal ETF (return before taxes)	-21.05 %	-8.14 %
Market Vectors Coal ETF (return after taxes on distributions)	-21.51 %	-8.47 %
Market Vectors Coal ETF (return after taxes on distributions and sale of Fund Shares)	-13.68 %	-6.89 %
Stowe Global Coal Index SM (reflects no deduction for fees, expenses or taxes)	-20.91 %	-7.53 %

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao Hung (Peter) Liao	Portfolio Manager	January 2008
George Cao	Portfolio Manager	January 2008

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 55 of this Prospectus.

MARKET VECTORS GLOBAL ALTERNATIVE ENERGY ETF**INVESTMENT OBJECTIVE**

Market Vectors Global Alternative Energy ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Ardour Global IndexSM (Extra Liquid) (the Ardour Global Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.31 %
Total Annual Fund Operating Expenses ^(a)	0.81 %
Fee Waivers and Expense Reimbursement ^(a)	0.19 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.62 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.62% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 63
3	\$ 240
5	\$ 431
10	\$ 984

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 35% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in stocks of companies primarily engaged in the business of alternative energy. Such companies may include small- and medium-capitalization companies and foreign issuers. Alternative energy refers to the generation of power through environmentally friendly, non traditional sources. It includes power derived principally from bio-fuels (such as ethanol), bio mass, wind, solar, hydro and geothermal sources and also includes the various technologies that support the production, use and storage of these sources. As of December 31, 2012, the Ardour Global Index included 30 securities of companies with a market capitalization range of between approximately \$347 million and \$18.3 billion and a weighted average market capitalization of \$4.8 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholders approval upon 60 days' prior written notice to shareholders. Under

MARKET VECTORS GLOBAL ALTERNATIVE ENERGY ETF (continued)

normal market conditions, the Fund intends to invest at least 30% of its assets in the securities of non-U.S. companies located in at least three different countries.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Ardour Global Index by investing in a portfolio of securities that generally replicates the Ardour Global Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Ardour Global Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund normally invests at least 80% of its total assets in securities that comprise the Ardour Global Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Ardour Global Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Ardour Global Index concentrates in an industry or group of industries. As of December 31, 2012, the Ardour Global Index was concentrated in the alternative energy industry and industrials and information technology sectors and the utilities sector represented a significant portion of the Ardour Global Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Alternative Energy Industry. Alternative energy refers to the generation of power through environmentally friendly sources that can replace or supplement traditional fossil-fuel sources. It includes power derived principally from bio fuels (such as ethanol), bio mass, wind, solar, hydro and geothermal sources and also includes the various technologies that support the production, use and storage of these sources.

The alternative energy industry may be significantly affected by the competition from new and existing market entrants, obsolescence of technology, short product cycles, varying prices and profits, commodity price volatility, changes in exchange rates, imposition of import controls, depletion of resources, technological developments and general economic conditions, fluctuations in energy prices and supply and demand of alternative energy fuels, energy conservation, the success of exploration projects and tax and other government regulations. Shares of companies involved in the alternative energy industry have been more volatile than shares of companies operating in more established industries. Certain valuation methods currently used to value companies involved in the alternative energy industries have not been in widespread use for a significant period of time. As a result, the use of these valuation methods may serve to further increase the volatility of certain alternative and transitional energy company share prices. If government subsidies and incentives for alternative energy sources are reduced or eliminated, the demand for alternative energy may decline and cause corresponding declines in the revenues and profits of companies engaged in the alternative energy industry. In addition, changes in U.S., European and other governments' policies towards alternative energy technology also may have an adverse effect on the Fund's performance. Furthermore, the Fund may invest in the shares of companies with a limited operating history, some of which may never have operated profitably. Investment in young companies with a short operating history is generally riskier than investing in companies with a longer operating history. The Fund will carry greater risk and may be more volatile than a portfolio composed of securities issued by companies operating in a wide variety of different industries.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the Ardour Global Index is concentrated in the industrials sector, the Fund will be sensitive to changes in, and its performance will depend on to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Information Technology Sector. The information technology sector includes software developers, providers of information technology consulting and services and manufacturers and distributors of computers, peripherals, communications equipment and semiconductors. Because as currently constituted the Ardour Global Index is concentrated in the information technology sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the information technology sector. Information technology companies face intense competition, both domestically and internationally, which may have an adverse affect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face

product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Risk of Investing in the Utilities Sector. The utilities sector includes companies that produce or distribute electricity, gas or water. Because as currently constituted the utilities sector represents a significant portion of the Ardour Global Index, the Fund will be sensitive to changes in, and its performance may depend to a great extent on, the overall condition of the utilities sector. Companies in the utilities sector may be adversely affected by changes in exchange rates, domestic and international competition, difficulty in raising adequate amounts of capital and governmental limitation on rates charged to customers.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the Ardour Global Index is concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions partially for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include

unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Ardour Global Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Ardour Global Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Ardour Global Index and raising cash to meet redemptions or deploying cash with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the Ardour Global Index, the Fund's return may deviate significantly from the return of the Ardour Global Index. In addition, the Fund may not be able to invest in certain securities included in the Ardour Global Index, or

MARKET VECTORS GLOBAL ALTERNATIVE ENERGY ETF (continued)

invest in them in the exact proportions they represent of the Ardour Global Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Ardour Global Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Ardour Global Index is not based on fair value prices), the Fund's ability to track the Ardour Global Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Ardour Global Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Ardour Global Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Ardour Global Index, the Fund's assets are concentrated in the industrials and information technology sectors and alternative energy industry; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on those sectors and industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year, five years and since inception compared with a the Fund's benchmark index and broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

MARKET VECTORS GOLD MINERS ETF

INVESTMENT OBJECTIVE

Market Vectors Gold Miners ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the NYSE Arca Gold Miners Index (the Gold Miners Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.02 %
Total Annual Fund Operating Expenses ^(a)	0.52 %
Fee Waivers and Expense Reimbursement ^(a)	0.00 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.52 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.53% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 53
3	\$ 167
5	\$ 291
10	\$ 653

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 5% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in common stocks and American depositary receipts (ADRs) of companies involved in the gold mining industry. Such companies may include medium-capitalization companies and foreign issuers. As of December 31, 2012, the Gold Miners Index included 29 securities of companies with a market capitalization range of between approximately \$209 million and \$35.0 billion and a weighted average market capitalization of \$14.5 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Gold Miners Index by investing in a portfolio of securities that generally replicates the Gold Miners Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Gold Miners Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund normally invests at least 80% of its total assets in securities that comprise the Gold Miners Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Gold Miners Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Gold Miners Index concentrates in an industry or group of industries. As of December 31, 2012, the Gold Miners Index was concentrated in the gold mining industry.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Gold Mining Industry. Because as currently constituted the Gold Miners Index is concentrated in the gold mining industry, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the gold mining industry. Competitive pressures may have a significant effect on the financial condition of such companies in the gold mining industry. Also, gold mining companies are highly dependent on the price of gold bullion. These prices may fluctuate substantially over short periods of time so the Fund's Share price may be more volatile than other types of investments. In times of significant inflation or great economic uncertainty, gold and other precious metals may outperform traditional investments such as bonds and stocks. However, in times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the value of gold and other precious metals may be adversely affected, which could in turn affect the Fund's returns. If a natural disaster or other event with a significant economic impact occurs in a region where the companies in which the Fund invests operate, such disaster or event could negatively affect the profitability of such companies and, in turn, the Fund's investment in them.

Risk of Investing in ADRs. ADRs are issued by U.S. banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. With respect to ADRs not included in the Gold Miners Index, the Fund's investments in ADRs may be less liquid than the underlying shares in their primary trading market and may negatively affect the Fund's ability to replicate the performance of the Gold Miners Index. In addition, investments in ADRs that are not included in the Gold Miners Index may increase tracking error.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund generally will be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less

management depth and experience and less competitive strength. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

MARKET VECTORS GOLD MINERS ETF (continued)

Index Tracking Risk. The Fund's return may not match the return of the Gold Miners Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Gold Miners Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Gold Miners Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Gold Miners Index, the Fund's return may deviate significantly from the return of the Gold Miners Index. In addition, the Fund may not be able to invest in certain securities included in the Gold Miners Index, or invest in them in the exact proportions they represent of the Gold Miners Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Gold Miners Index is based on securities' closing prices on local foreign markets (i.e., the value of the Gold Miners Index is not based on fair value prices), the Fund's ability to track the Gold Miners Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Gold Miners Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Gold Miners Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Gold Miners Index, the Fund's assets are concentrated in the gold mining industry; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year, five years and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

MARKET VECTORS JUNIOR GOLD MINERS ETF**INVESTMENT OBJECTIVE**

Market Vectors Junior Gold Miners ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Global Junior Gold Miners Index (the Junior Gold Miners Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.05 %
Total Annual Fund Operating Expenses ^(a)	0.55 %
Fee Waivers and Expense Reimbursement ^(a)	0.00 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.55 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs,

trading expenses, taxes and extraordinary expenses) from exceeding 0.56% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 56
3	\$ 176
5	\$ 307
10	\$ 689

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in

higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 22% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Fund will normally invest at least 80% of its total assets in companies that are involved in the gold mining industry (the 80% policy). The Junior Gold Miners Index includes companies that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to) gold mining and/or silver mining or have mining projects with the potential to generate at least 50% of their revenues from gold and/or silver when developed. Such companies may include micro-, small- and medium capitalization companies and foreign issuers. As of December 31, 2012, the Junior Gold Miners Index included 76 securities of companies with a market capitalization range of between approximately \$107 million and \$1.4 billion and a weighted average market capitalization of \$743 billion. These amounts are subject to change. The Fund's 80% policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Junior Gold Miners Index by investing in a portfolio of securities that generally replicates the Junior Gold Miners Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Junior Gold Miners Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund normally invests at least 80% of its total assets in securities that comprise the Junior Gold Miners Index. As of December 31, 2012, approximately 86% of the Junior Gold Miners Index was comprised of securities of companies that are involved in the gold mining industry.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Junior Gold Miners Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Junior Gold Miners Index concentrates in an industry or group of industries. As of December 31, 2012, the Junior Gold Miners Index was concentrated in the gold and silver mining industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Gold and Silver Mining Industries. Because as currently constituted the Junior Gold Miners Index is concentrated in the gold and silver mining industries, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the gold and silver mining industries. Competitive pressures may have a significant effect on the financial condition of companies in the gold mining and silver mining industries. Also, gold and silver mining companies are highly dependent on the price of gold bullion and silver bullion, respectively. These prices may fluctuate substantially over short periods of time so the Fund's Share price may be more volatile than other types of investments.

In particular, a drop in the price of gold and/or silver bullion would particularly adversely affect the profitability of small- and medium-capitalization mining companies and their ability to secure financing. Furthermore, companies that are only in the exploration stage are typically unable to adopt specific strategies for controlling the impact of the price of gold. In times of significant inflation or great economic uncertainty, gold, silver and other precious metals may outperform traditional investments such as bonds and stocks. However, in times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the value of gold, silver and other precious metals may be adversely affected, which could in turn affect the Fund's returns. If a natural disaster or other event with a significant economic impact occurs in a region where the companies in which the Fund invests operate, such disaster or event could negatively affect the profitability of such companies and, in turn, the Fund's investment in them.

A significant amount of the companies in the Junior Gold Miners Index may be early stage mining companies that are in the exploration stage only or that hold properties that might not ultimately produce gold or silver. The exploration and development of mineral deposits involve significant financial risks over a significant period of time which even a combination of careful evaluation, experience and knowledge may not eliminate. Few properties which are explored are ultimately developed into producing mines. Major expenditures may be required to establish reserves by drilling and to construct mining and processing facilities at a site. In addition, many early stage miners operate at a loss and are dependent on securing equity and/or debt financing, which might be more difficult to secure for an early stage mining company than for a more established counterpart.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with

MARKET VECTORS JUNIOR GOLD MINERS ETF (continued)

larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Junior Gold Miners Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Junior Gold Miners Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Junior Gold Miners Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the Junior Gold Miners Index, the Fund's return may deviate significantly from the return of the Junior Gold Miners Index. In addition, the Fund may not be able to invest in certain securities included in the Junior Gold Miners Index, or invest in them in the exact proportions they represent of the Junior Gold Miners Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Junior Gold Miners Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Junior Gold Miners Index is not based on fair value prices), the Fund's ability to track the Junior Gold Miners Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Junior Gold Miners Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Junior Gold Miners Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Junior Gold Miners Index, the Fund's assets are concentrated in the gold and silver mining industries; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on those industries will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 29.25% 3Q 12

Worst Quarter: -21.71% 2Q 12

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (11/10/09)
Market Vectors Junior Gold Miners ETF (return before taxes)	-16.07 %	-1.61 %
Market Vectors Junior Gold Miners ETF (return after taxes on distributions)	-17.14 %	-3.36 %
Market Vectors Junior Gold Miners ETF (return after taxes on distributions and sale of Fund Shares)	-10.44 %	-2.11 %
Market Vectors® Global Junior Gold Miners Index (reflects no deduction for fees, expenses or taxes)	-15.39 %	-1.23 %
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	16.00 %	11.17 %

MARKET VECTORS OIL SERVICES ETF**SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

Market Vectors Oil Services ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® US Listed Oil Services 25 Index (the Oil Services Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.35 %
Other Expenses	0.03 %
Total Annual Fund Operating Expenses ^(a)	0.38 %
Fee Waivers and Expense Reimbursement ^(a)	0.03 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.35 %

(a) Van Eck Associates Corporation (the Adviser) has contractually agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses,

interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.35% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 36
3	\$ 119
5	\$ 210
10	\$ 477

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover was 6% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Oil Services Index is comprised of common stocks and depositary receipts of U.S. exchange-listed companies in the oil services industry. Such companies may include medium-capitalization companies and foreign companies that are listed on a U.S. exchange. Companies are considered to be in the oil services industry if they derive at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to) oil services to the upstream oil sector, which include oil equipment, oil services or oil drilling. Of the largest 50 stocks in the oil services industry by full market capitalization, the top 25 by free-float market capitalization (*e.g.*, includes only shares that are readily available for trading in the market) and three month

average daily trading volume are included in the Oil Services Index. As of December 31, 2012, the Oil Services Index included 25 securities of companies with a market capitalization range of between approximately \$1.8 billion and \$92.0 billion and a weighted average market capitalization of \$30.6 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Oil Services Index by investing in a portfolio of securities that generally replicates the Oil Services Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Oil Services Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund will concentrate its investments in a particular industry or group of industries to the extent that the Oil Services Index concentrates in an industry or group of industries. As of December 31, 2012, the Oil Services Index was concentrated in the oil services industry and the energy sector.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Oil Services Industry. The profitability of companies in the oil services industry is related to worldwide energy prices, including all sources of energy, and exploration and production spending. The price of energy, the earnings of companies in the oil services industry, and the value of such companies' securities can be extremely volatile. Such companies are also subject to risks of changes in exchange rates and the price of oil and gas, government regulation, world events, negative perception, depletion of resources and general economic conditions, as well as market, economic and political risks of the countries where oil services companies are located or do business. Oil services companies operate in a highly competitive and cyclical industry, with intense price competition.

The oil services industry is exposed to significant and numerous operating hazards. Oil and gas exploration and production can be significantly affected by natural disasters and adverse weather conditions in the regions in which they operate. The revenues of oil services companies may be negatively affected by contract termination and renegotiation. Oil services companies are subject to, and may be adversely affected by, extensive federal, state, local and foreign laws, rules and regulations. Oil exploration and production companies may also be adversely affected by environmental damage claims. The international operations of oil services companies expose them to risks associated with instability and changes in economic and political conditions, foreign currency fluctuations, changes in foreign regulations and other risks inherent to international business. Some of the companies in the Oil Services Index are engaged in other lines of business unrelated to oil services, and they may experience problems with these lines of business which could adversely affect their operating results. The operating results of these companies may fluctuate as a result of these additional risks and events in the other lines of business. In addition, a company's ability to engage in new activities may expose it to business risks with which it has less experience than it has with the business risks associated with its traditional businesses. Despite a company's possible success in traditional oil services activities, there can be no assurance that the other lines of business in which these companies are engaged will not have an adverse effect on a company's business or financial condition.

Certain companies in which the Fund may invest are non-U.S. issuers whose securities are listed on U.S. exchanges. These securities involve risks beyond those associated with investments in U.S. securities, including greater market volatility, higher transactional costs, taxation by foreign governments, political instability and the possibility that

foreign governmental restrictions may be adopted which might adversely affect such securities.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the Oil Services Index is concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts issued by banks or trust companies listed on U.S. exchanges that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market

MARKET VECTORS OIL SERVICES ETF (continued)

and, if not included in the Oil Services Index, may negatively affect the Fund's ability to replicate the performance of the Oil Services Index.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers. A change in the financial condition, market perception or credit rating of an issuer of securities included in the Oil Services Index may cause the value of its securities to decline.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Oil Services Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Oil Services Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Oil Services Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Oil Services Index, the Fund's return may deviate significantly from the return of the Oil Services Index. In addition, the Fund may not be able to invest in certain securities included in the Oil Services Index, or invest in them in the exact proportions in which they are represented in the Oil Services Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Oil Services Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Oil Services Index is not based on fair value prices), the Fund's ability to track the Oil Services Index may be adversely affected.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Oil Services Index, the Fund generally would not sell

a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Oil Services Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Oil Services Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Oil Services Index, the Fund's assets are concentrated in the oil services industry and energy sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that

sector and industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the last calendar year. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 55 of this Prospectus.

MARKET VECTORS RARE EARTH/STRATEGIC METALS ETF**INVESTMENT OBJECTIVE**

Market Vectors Rare Earth/Strategic Metals ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Global Rare Earth/Strategic Metals Index (the Rare Earth/Strategic Metals Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.16 %
Total Annual Fund Operating Expenses ^(a)	0.66 %
Fee Waivers and Expense Reimbursement ^(a)	0.07 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.59 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs,

trading expenses, taxes and extraordinary expenses) from exceeding 0.57% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 60
3	\$ 204
5	\$ 361
10	\$ 816

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in

higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover was 44% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Rare Earth/Strategic Metals Index is comprised of companies primarily engaged in a variety of activities that are related to the producing, refining and recycling of rare earth and strategic metals and minerals. Such companies may include micro-, small- and medium-capitalization companies and foreign and emerging market issuers. The Rare Earth/Strategic Metals Index includes companies that generate at least 50% of their revenues from (or, in certain circumstances, at least 50% of their assets related to) rare earth/strategic metals or with mining projects that have the potential to generate at least 50% of their revenues from rare earth/strategic metals when developed. Rare earth/strategic metals are industrial metals that are typically mined as by-products

or secondary metals in operations focused on precious metals and base metals. Compared to base metals, they have more specialized uses and are often more difficult to extract. Currently, approximately 43 elements in the periodic table are considered rare earth/strategic metals. Rare earth metals (or rare earth elements), a subset of strategic metals, are a collection of chemical elements that are crucial to many of the world's most advanced technologies, such as cellular phones, high performance batteries, flat screen televisions, green energy technology, and are critical to the future of hybrid and electric cars, high-tech military applications and superconductors and fiber-optic communication systems. As of December 31, 2012, the Rare Earth/Strategic Metals Index included 23 securities of companies with a market capitalization range of between approximately \$145 million and \$6.7 billion and a weighted average market capitalization of \$1.7 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Rare Earth/Strategic Metals Index by investing in a portfolio of securities that generally replicates the Rare Earth/Strategic Metals Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Rare Earth/Strategic Metals Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may also utilize depository receipts to seek performance that corresponds to the Rare Earth/Strategic Metals Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Rare Earth/Strategic Metals Index concentrates in an industry or group of industries. As of December 31, 2012, the Rare Earth/Strategic Metals Index was concentrated in the mining industry.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in Rare Earth and Strategic Metals. Rare earth/strategic metals are industrial metals that are typically mined as by-products or secondary metals in operations focused on precious metals and base metals. Compared to base metals, they have more specialized uses and are often more difficult to extract. Currently, approximately 49 elements in the periodic table are considered rare earth/strategic metals. Rare earth metals (or rare earth elements), a subset of strategic metals, are a collection of chemical elements that are crucial to many of the world's most advanced technologies. The use of strategic metals in modern technology has increased dramatically over the past years. Consequently, the demand for strategic metals has strained the supply, which has the potential to result in a shortage of such materials which could adversely affect the companies in the Fund's portfolio. Companies involved in the various activities that are related to the producing, refining and recycling of rare earth/strategic metals tend to be small-, medium- and micro-capitalization companies with volatile share prices, are highly dependent on the price of rare earth/strategic metals which may fluctuate substantially over short periods of time and can be significantly affected by events relating to international, national and local political and economic developments, energy conservation, the success of exploration projects, commodity prices, and tax and other government regulations. The producing, refining and recycling of rare earth/strategic metals can be capital intensive and, if companies involved in such activities are not managed well, the share prices of such companies could decline even as prices for the underlying rare earth/strategic metals are rising. In addition, companies involved in the various activities that are related to the producing, refining and recycling of rare earth/strategic metals may be at risk for environmental damage claims.

Risk of Regulatory Action and Changes in Governments. The producing, refining and recycling of rare earth/strategic metals may be significantly affected by regulatory action and changes in governments. For example, China, which produces more than 90% of the world's rare earth supplies, has implemented a reduction in its export quota of rare earth/strategic metals and has considered a complete ban on the export of such metals. Such moves by China or other countries essential to the producing, refining or recycling of rare earth/strategic metals could have a significant adverse effect on industries around the globe and on the values of the businesses in which the Fund invests. Moreover, while it is expected that China will consume most if not all, of the rare earth/strategic metals produced within the country to support its growing economy, China has shown a willingness to flood the market for rare earth/strategic metals as it did in the late 1990s, thereby causing many operations to shut down.

Risk of Investing in the Mining Industry. Because as currently constituted the Rare Earth/Strategic Metals Index is concentrated in the mining industry, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the mining industry. Competitive pressures may have a significant effect on the financial condition of such companies. Mining companies are highly dependent on the price of the underlying metal or element. These prices may fluctuate substantially over short periods of time so the Fund's Share price may be more volatile than other types of investments. In particular, a drop in the price of rare earth/strategic metals would particularly adversely affect the profitability of small- and

MARKET VECTORS RARE EARTH/STRATEGIC METALS ETF (continued)

medium-capitalization mining companies and their ability to secure financing. Furthermore, companies that are only in the exploration stage are typically unable to adopt specific strategies for controlling the impact of such price changes. In addition, many early stage miners operate at a loss and are dependent on securing equity and/or debt financing, which might be more difficult to secure for an early stage mining company than for a more established counterpart.

Risk of Investing in the Materials Sub-Industry. To the extent the Rare Earth/Strategic Metals Index includes securities of issuers in the materials sub-industry of the strategic metals industry, the Fund will invest in companies in such sub-industry. Companies in the materials sub-industry of the strategic metals industry may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers. A change in the financial condition, market perception or credit rating of an issuer of securities included in the Rare Earth/Strategic Metals Index may cause the value of its securities to decline.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions partially for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Rare Earth/Strategic Metals Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Rare Earth/Strategic Metals Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Rare Earth/Strategic Metals Index and raising cash to meet redemptions or deploying cash with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and

selling securities while such costs and risks are not factored into the return of the Rare Earth/Strategic Metals Index, the Fund's return may deviate significantly from the return of the Rare Earth/Strategic Metals Index. In addition, the Fund may not be able to invest in certain securities included in the Rare Earth/Strategic Metals Index, or invest in them in the exact proportions they represent of the Rare Earth/Strategic Metals Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Rare Earth/Strategic Metals Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Rare Earth/Strategic Metals Index is not based on fair value prices), the Fund's ability to track the Rare Earth/Strategic Metals Index may be adversely affected.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Rare Earth/Strategic Metals Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Rare Earth/Strategic Metals Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Rare Earth/Strategic Metals Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Rare Earth/Strategic Metals Index, it is expected that the Fund's assets will be concentrated in the mining industry and that the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar year shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

MARKET VECTORS RVE HARD ASSETS PRODUCERS ETF**INVESTMENT OBJECTIVE**

Market Vectors RVE Hard Assets Producers ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of The *Rogers*TM-Van Eck Hard Assets Producers Index (the Hard Assets Producers Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder expenses (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.18 %
Total Annual Fund Operating Expenses ^(a)	0.68 %
Fee Waivers and Expense Reimbursement ^(a)	0.16 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.52 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs,

trading expenses, taxes and extraordinary expenses) from exceeding 0.49% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 53
3	\$ 201
5	\$ 363
10	\$ 831

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in

higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 10% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in equity securities, which may include depositary receipts, of U.S. and foreign hard asset producer companies. A company will be considered to be a hard asset producer company if it, directly or indirectly, derives at least 50% of its revenues from the production and/or distribution of commodities and commodity-related products and services, including among others, companies that fabricate mining or drilling equipment. Such companies may include foreign issuers. As of December 31, 2012, the Hard Assets Producers Index included 336 securities of companies with a market capitalization range of between approximately \$464 million and \$389.6 billion and a weighted average market capitalization of \$66.7 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be change without shareholder approval upon 60 days' prior written notice to shareholders.

MARKET VECTORS RVE HARD ASSETS PRODUCERS ETF (continued)

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Hard Assets Producers Index by investing in a portfolio of securities that generally replicates the Hard Assets Producers Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Hard Assets Producers Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund normally invests at least 80% of its total assets in securities that comprise the Hard Assets Producers Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Hard Assets Producers Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Hard Assets Producers Index concentrates in an industry or group of industries. As of December 31, 2012, the Hard Assets Producers Index was concentrated in the hard assets industry and the energy and basic materials sectors.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Hard Assets Industry. Because as currently constituted the Hard Assets Products Index is concentrated in the hard assets industry, the Fund is subject to risks associated with concentrating its investments in hard assets and the hard assets industry, including agriculture, alternatives (*e.g.*, water and alternative energy), base and industrial metals, energy, forest products and precious metals, and can be significantly affected by events relating to these industries, including international political and economic developments, inflation, and other factors. The Fund's portfolio securities may experience substantial price fluctuations as a result of these factors, and may move independently of the trends of operating companies. Companies engaged in the sectors listed above may be adversely affected by changes in government policies and regulations, technological advances and/or obsolescence and competition from new market entrants. Changes in general economic conditions, including commodity price volatility, changes in exchange rates, imposition of import controls, depletion of resources and labor relations, could adversely affect the Fund's portfolio companies.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the Hard Assets Producers Index is concentrated in the basic materials sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the Hard Assets Producers Index is concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating

rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Depositary Receipts. Depositary receipts in which the Fund may invest are receipts issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Hard Assets Producers Index, may negatively affect the Fund's ability to replicate the performance of the Hard Assets Producers Index.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Hard Assets Producers Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Hard Assets Producers Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Hard Assets Producers Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the Hard Assets Producers Index, the Fund's return may deviate significantly from the return of the Hard Assets Producers Index. In addition, the Fund may not be able to invest in certain securities included in the Hard Assets Producers Index, or invest in them in the exact proportions they represent of the Hard Assets Producers Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of Hard Assets Producers Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Hard Assets Producers Index is not based on fair value prices), the Fund's ability to track the Hard Assets Producers Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Hard Assets Producers Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Hard Assets Producers Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Hard Assets Producers Index, the Fund's assets are concentrated in the energy sector and the hard assets industry; therefore, the Fund will be subject to the risk that

economic, political or other conditions that have a negative effect on that sector and industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

YEAR	EXPENSES
1	\$ 67
3	\$ 468
5	\$ 894
10	\$ 2,081

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 59% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Solar Energy Index, which is the Fund's benchmark index, is comprised of equity securities of companies that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to) photovoltaic and solar power, or the provision of solar power equipment/technologies and materials or services to solar power equipment/technologies producers. Such companies may include micro-, small- and medium-capitalization companies and foreign issuers, including Chinese issuers. As of December 31, 2012, the Solar Energy Index included 34 securities of companies with a market capitalization range of between approximately \$98 million and \$3.3 billion and a weighted average market capitalization of \$1.2 billion. These amounts

MARKET VECTORS SOLAR ENERGY ETF (continued)

are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Solar Energy Index by investing in a portfolio of securities that generally replicates the Solar Energy Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Solar Energy Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Solar Energy Index concentrates in an industry or group of industries. As of December 31, 2012, the Solar Energy Index was concentrated in the solar energy industry and the information technology sector.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Solar Energy Industry. Companies engaged in the solar energy industry may be significantly affected by increased competition from new and existing market entrants, technological developments, obsolescence of technology and short product cycles. In addition, the solar energy industry is at a relatively early stage of development and the extent to which solar energy will be widely adopted is uncertain. Because as currently constituted the Solar Energy Index is concentrated in the solar energy industry, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the solar energy industry. Companies in this industry may also be significantly affected by general economic conditions such as varying prices and profits, commodity price volatility, changes in exchange rates, imposition of import controls, depletion of resources, fluctuations in energy prices and supply and demand of alternative energy fuels, energy conservation, labor relations and tax and other government regulations. Shares of companies involved in the solar energy industry have historically been more volatile than shares of companies operating in more established industries. Certain valuation methods currently used to value companies involved in the solar energy industry have not been in widespread use for a significant period of time. As a result, the use of these valuation methods may serve to further increase the volatility of certain solar energy company share prices. If government subsidies and economic incentives for alternative energy sources, particularly solar power, are reduced or eliminated, the demand for solar energy may decline and cause corresponding declines in the revenues and profits of companies engaged in the solar energy industry. In addition, changes in U.S., European and other governments' policies towards solar energy technology also may have an adverse effect on the Fund's performance.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently constituted the Solar Energy Index is concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Information Technology Sector. The information technology sector includes software developers, providers of information technology consulting and services and manufacturers and distributors of computers, peripherals, communications equipment and semiconductors. Because as currently constituted the Solar Energy Index is concentrated in the information technology sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the information technology sector. Information technology companies face intense competition, both domestically and internationally, which may have an adverse affect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Special Risk Considerations of Investing in Chinese Issuers. Investment in securities of Chinese issuers, including issuers located outside of China that generate significant revenues from China, involves additional risks, including, but not limited to: the economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, interest rates, allocation of resources and capital

reinvestment, among others; the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership; and actions of the Chinese central and local government authorities continue to have a substantial effect on economic conditions in China. In addition, previously the Chinese government has from time to time taken actions that influence the prices at which certain goods may be sold, encourage companies to invest or concentrate in particular industries, induce mergers between companies in certain industries and induce private companies to publicly offer their securities to increase or continue the rate of economic growth, control the rate of inflation or otherwise regulate economic expansion. It may do so in the future as well, potentially having a significant adverse effect on economic conditions in China, the economic prospects for, and the market prices and liquidity of, securities issued by Chinese issuers. In addition, investment and trading restrictions make it difficult for non-Chinese investors to directly access securities issued by Chinese issuers. These restrictions may impact the availability, liquidity, and pricing of certain securities issued by Chinese issuers. Additionally, the Chinese government maintains strict currency controls and regularly intervenes in the currency market. The Chinese government's actions may not be transparent or predictable. As a result, the value of the Renminbi may change quickly and arbitrarily. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Risk of Investing in Micro-Capitalization Companies. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Risk of Cash Transactions. Unlike most exchange-traded funds (ETFs), the Fund expects to effect its creations and redemptions partially for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Solar Energy Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Solar Energy Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Solar Energy Index and raising cash to meet redemptions or deploying cash with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the Solar Index, the Fund's return may deviate significantly from the return of the Solar Index. In addition, the Fund may not be able to invest in certain securities included in the Solar Index, or invest in them in the exact proportions they represent of the Solar Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices

MARKET VECTORS SOLAR ENERGY ETF (continued)

and the value of Solar Energy Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Solar Energy Index is not based on fair value prices), the Fund's ability to track the Solar Energy Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Solar Energy Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Solar Energy Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Solar Energy Index, the Fund's assets are concentrated in the solar energy industry and the information technology sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector and industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter 33.87% 2Q 09

Worst Quarter -57.57% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Prior to March 15, 2013, the Fund sought to replicate an index called the Ardour Solar Energy IndexSM.

	Past One Year	Since Inception (4/21/2008)
Market Vectors Solar Energy ETF (return before taxes)	-31.89 %	-43.87 %
Market Vectors Solar Energy ETF (return after taxes on distributions)	-32.73 %	-44.31 %
Market Vectors Solar Energy ETF (return after taxes on distributions and sale of Fund Shares)	-20.73 %	-28.60 %
Ardour Solar Energy Index SM (reflects no deduction for fees, expenses or taxes)	-34.62 %	-44.56 %
S&P 500 [®] Index (reflects no deduction for fees, expenses or taxes)	16.00 %	2.86 %

MARKET VECTORS STEEL ETF

INVESTMENT OBJECTIVE

Market Vectors Steel ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the NYSE Arca Steel Index (the Steel Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.10 %
Total Annual Fund Operating Expenses ^(a)	0.60 %
Fee Waivers and Expense Reimbursement ^(a)	0.05 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.55 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading

expenses, taxes and extraordinary expenses) from exceeding 0.55% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 56
3	\$ 187
5	\$ 330
10	\$ 745

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 13% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in common stocks and American depositary receipts (ADRs) of companies involved in the steel industry. Such companies may include medium-capitalization companies and foreign issuers. As of December 31, 2012, the Steel Index included 26 securities of companies with a market capitalization range of between approximately \$242 million and \$82.0 billion and a weighted average market capitalization of \$25.7 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Steel Index by investing in a portfolio of securities that generally replicates the Steel Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Steel Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund normally invests at least 80% of its total assets in securities that comprise the Steel Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Steel Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Steel Index concentrates in an industry or group of industries. As of December 31, 2012, the Steel Index was concentrated in the steel industry.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Steel Industry. Because as currently constituted the Steel Index is concentrated in the steel industry, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the steel industry. Competitive pressures may have a significant effect on the financial condition of such companies in the steel industry. Also, these companies are highly dependent on the price of steel. These prices may fluctuate substantially over short periods of time, so the Fund's Share price may be more volatile than other types of investments. These companies are also affected by changes in government regulation, world events and economic conditions. Companies involved in the steel industry may benefit from government subsidies or certain trade protections. If those subsidies or trade protections are reduced or removed, the profits of companies engaged in the steel industry may be affected, potentially drastically. In addition, these companies are at risk for environmental damage claims.

Risk of Investing in the Mining Industry. To the extent the Steel Index includes securities of issuers in the mining industry, the Fund will invest in companies in such industry. As such, the Fund may be sensitive to changes in, and its performance may depend on, the overall condition of the mining industry. Competitive pressures may have a significant effect on the financial condition of such companies. Mining companies are highly dependent on the price of the underlying metal or element. These prices may fluctuate substantially over short periods of time so the Fund's Share price may be more volatile than other types of investments.

Risk of Investing in ADRs. ADRs are issued by U.S. banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. With respect to ADRs not included in the Steel Index, the Fund's investments in ADRs may be less liquid than the underlying shares in their primary trading market and may negatively affect the Fund's ability to replicate the performance of the Steel Index. In addition, investments in ADRs that are not included in the Steel Index may increase tracking error.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies,

changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

MARKET VECTORS STEEL ETF (continued)

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Steel Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Steel Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Steel Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Steel Index, the Fund's return may deviate significantly from the return of the Steel Index. In addition, the Fund may not be able to invest in certain securities included in the Steel Index, or invest in them in the exact proportions they represent of the Steel Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Steel Index is based on securities' closing prices on local foreign markets (i.e., the value of the Steel Index is not based on fair value prices), the Fund's ability to track the Steel Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Steel Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Steel Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Steel Index, the Fund's assets are concentrated in the steel industry; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year, five years and since inception compared with the Fund's benchmark index and a

broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter 53.31% 2Q 09

Worst Quarter -50.25% 3Q 08

Average Annual Total Returns for the Periods Ended December 31, 2012

The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Past Five Years	Since Inception (10/10/2006)
Market Vectors Steel ETF (return before taxes)	4.80 %	-8.31 %	5.21 %
Market Vectors Steel ETF (return after taxes on distributions)	4.01 %	-9.07 %	4.46 %

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 55 of this Prospectus.

MARKET VECTORS UNCONVENTIONAL OIL & GAS ETF**INVESTMENT OBJECTIVE**

Market Vectors Unconventional Oil & Gas ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Global Unconventional Oil & Gas Index (the Oil & Gas Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.42 %
Total Annual Fund Operating Expenses ^(a)	0.92 %
Fee Waivers and Expense Reimbursement ^(a)	0.38 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.54 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs,

trading expenses, taxes and extraordinary expenses) from exceeding 0.54% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 55
3	\$ 255
5	\$ 472
10	\$ 1,096

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in

higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the period February 14, 2012 (the Fund's commencement of operations) through December 31, 2012, the Fund's portfolio turnover was 35% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Oil & Gas Index is comprised of securities of companies involved in the exploration, development, extraction and/or production of unconventional oil and natural gas. The Oil & Gas Index contains companies that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to) unconventional oil and gas or that own properties with the potential, in Market Vectors Index Solutions GmbH's (the Index Provider) view, to generate at least 50% of their revenues from this segment. Such companies may include medium-capitalization companies and foreign issuers. Unconventional oil and natural gas includes: coal bed methane, coal seam gas, shale oil, shale gas, tight natural gas, tight oil and tight sands. Unconventional oil and natural gas sources may be geographically extensive or deeply embedded in underground rock formations and are difficult to extract profitably without the use of new or developing technologies. Developing technologies include, among

others, hydraulic fracturing (process of creating or expanding cracks in underground rock formations by pumping a high pressure mixture of water, sand and/or other additives into them) and horizontal drilling (method of drilling a well to reach a reservoir that is not directly beneath the drilling site). As of December 31, 2012, the Oil & Gas Index included 47 securities of companies with a market capitalization range of between approximately \$791 million and \$62.1 billion and a weighted average market capitalization of \$18.4 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts before fees and expenses to approximate the investment performance of the Oil & Gas Index by investing in a portfolio of securities that generally replicates the Oil & Gas Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Oil & Gas Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund will concentrate its investments in a particular industry or group of industries to the extent that the Oil & Gas Index concentrates in an industry or group of industries. As of December 31, 2012, the Oil & Gas Index was concentrated in the oil and gas industry and the energy sector.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Oil and Gas Industry. The profitability of companies in the oil and gas industry is related to worldwide energy prices, including all sources of energy, and exploration and production spending. The price of energy, the earnings of companies in the oil and gas industry, and the value of such companies' securities can be extremely volatile. Such companies are also subject to risks of changes in commodity prices, interest rates, exchange rates and the price of oil and gas, government regulation, world events, negative perception, depletion of resources, development of alternative energy sources, technological developments, labor relations and general economic conditions, as well as market, economic and political risks of the countries where oil and gas companies are located or do business. Oil and gas companies operate in a highly competitive and cyclical industry, with intense price competition. A significant portion of their revenues may depend on a relatively small number of customers, including governmental entities and utilities.

The oil and gas industry is exposed to significant and numerous operating hazards. Oil and gas exploration and production can be significantly affected by natural disasters and adverse weather conditions in the regions in which they operate. The revenues of oil and gas companies may be negatively affected by contract termination and renegotiation. Oil and gas companies are subject to, and may be adversely affected by, extensive federal, state, local and foreign laws, rules and regulations. Oil exploration and production companies may also be adversely affected by environmental damage claims. The international operations of oil and gas companies expose them to risks associated with instability and changes in economic and political conditions, foreign currency fluctuations, changes in foreign regulations and other risks inherent to international business. Such companies may also have significant capital investments or operations in emerging market countries, which may increase these risks.

Risk of Investing in Unconventional Oil and Gas. Investments in companies engaged in activities related to the exploration and production, development, extraction, production and/or refining of unconventional oil and natural gas involve risks in addition to those related to the oil and gas industry. New or emerging oil and gas resource development projects have limited or no production history. Unconventional oil and gas properties are subject to

customary royalty interests, liens incidental to operating agreements, tax liens and other burdens, encumbrances, easements or restrictions. The marketability of unconventional oil and gas production depends in large part on the availability, proximity and capacity of pipeline systems owned by third parties. The use of methods such as hydraulic fracturing may be subject to new or different regulation in the future. Currently, the regulation of hydraulic fracturing is primarily conducted at the state level through permitting and other compliance requirements. Any new federal regulations that may be imposed on hydraulic fracturing could result in additional permitting and disclosure requirements (including of substances used in the fracturing process) and in additional operating restrictions. Some states and local governments have considered imposing various conditions and restrictions on drilling and completion operations, which could lead to operational delays and increased costs and, moreover, could delay or effectively prevent the development of oil and gas from formations that would not be economically viable without the use of hydraulic fracturing. The use of hydraulic fracturing may produce certain wastes that are not subject to federal regulations governing hazardous wastes, though they may be regulated under other federal and state laws. These wastes may in the future be designated as hazardous wastes and may thus become subject to more rigorous and costly compliance and disposal requirements.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because as currently

MARKET VECTORS UNCONVENTIONAL OIL & GAS ETF (continued)

constituted the Oil & Gas Index is concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Real Estate Industry. The Fund invests in companies that own real estate, which subjects the Fund to the risks of owning real estate directly. Adverse economic, business or political developments affecting real estate could have an effect on the value of the Fund's investments.

Risk of Investing in Depositary Receipts. Depositary receipts are receipts issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Oil & Gas Index, may negatively affect the Fund's ability to replicate the performance of the Oil & Gas Index.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Oil & Gas Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Oil & Gas Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Oil & Gas Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Oil & Gas Index, the Fund's return may deviate significantly from the return of the Oil & Gas Index. In addition, the Fund may not be able to invest in certain securities included in the Oil & Gas Index, or invest in them in the exact proportions in which they

are represented in the Oil & Gas Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of the Oil & Gas Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Oil & Gas Index is not based on fair value prices), the Fund's ability to track the Oil & Gas Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Oil & Gas Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or a group of industries to the extent the Oil & Gas Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Oil & Gas Index, the Fund's assets are concentrated in the energy sector and the oil and gas industry; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector and industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The Fund commenced operations on February 14, 2012 and therefore does not have a performance history for a full calendar year. Visit www.marketvectorsetfs.com for current performance figures.

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

George Cao	Portfolio Manager	Since inception

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 55 of this Prospectus.

MARKET VECTORS URANIUM+NUCLEAR ENERGY ETF**INVESTMENT OBJECTIVE**

Market Vectors Uranium+Nuclear Energy ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the DAXglobal® Nuclear Energy Index (the Nuclear Energy Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholders Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	0.17 %
Total Annual Fund Operating Expenses ^(a)	0.67 %
Fee Waivers and Expense Reimbursement ^(a)	0.07 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.60 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fees and expenses, interest expense, offering costs, trading expenses,

taxes and extraordinary expenses) from exceeding 0.60% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 61
3	\$ 207
5	\$ 366
10	\$ 828

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the

Fund's portfolio turnover rate was 52% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in equity securities of U.S. and foreign companies primarily engaged in various aspects of the nuclear energy business. Companies primarily engaged in the nuclear energy business include those engaged in uranium mining, uranium enrichment, uranium storage, providing equipment for use in the provision of nuclear energy, nuclear plant infrastructure, nuclear fuel transportation and nuclear energy generation, and which derive at least 50% of their total revenues from such activities. Such companies may include small- and medium-capitalization companies. As of December 31, 2012, the Nuclear Energy Index included 19 securities of companies with a market capitalization range of between approximately \$66 million and \$34.1 billion and a weighted average market capitalization of \$8.4 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Nuclear Energy Index by investing in a portfolio of securities that generally replicates the Nuclear Energy Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Nuclear Energy Index will be 95% or better. A figure of 100% would indicate perfect correlation. The Fund normally invests at least 80% of its total assets in securities that comprise the Nuclear Energy Index.

The Fund may also utilize convertible securities and participation notes to seek performance that corresponds to the Nuclear Energy Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Nuclear Energy Index concentrates in an industry or group of industries. As of December 31, 2012, the Nuclear Energy Index was concentrated in the nuclear energy industry and the energy and industrials sectors, and the utilities sector represented a significant portion of the Nuclear Energy Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in the Nuclear Energy Industry. The companies represented in the Fund's portfolio may face considerable risk as a result of, among other risks, incidents and accidents, breaches of security, ill-intentioned acts or terrorism, air crashes, natural disasters (such as floods or earthquakes), equipment malfunctions or mishandling in storage, handling, transportation, treatment or conditioning of substances and nuclear materials. Such events could have serious consequences, especially in case of radioactive contamination and irradiation of the environment, for the general population, as well as a material, negative impact on the Fund's portfolio companies and thus the Fund's financial situation. The March 2011 nuclear power plant catastrophe in Japan may have far reaching effects on the nuclear energy industry, the extent of which are uncertain. In addition, the nuclear energy industry is subject to competitive risk associated with the prices of other energy sources, such as natural gas and oil. Consumers of nuclear energy may have the ability to switch between the nuclear energy and other energy sources and, as a result, during periods when competing energy sources are less expensive, the revenues of companies in the nuclear energy industry may decline with a corresponding impact on earnings.

Nuclear activity is also subject to particularly detailed and restrictive regulations, with a scheme for the monitoring and periodic re-examination of operating authorization, which primarily takes into account nuclear safety, environmental and public health protection, and also national safety considerations (terrorist threats in particular). These regulations may be subject to significant tightening by national and international authorities. This could result in increased operating costs, which would have a negative impact on the Fund's portfolio companies and may cause operating businesses related to nuclear energy to become unprofitable or impractical to operate. Furthermore, uranium prices are subject to fluctuation. The price of uranium has been and will continue to be affected by numerous factors beyond the Fund's control. With respect to uranium, such factors include the demand for nuclear power, political and economic conditions in uranium producing and consuming countries, uranium supply from secondary sources and uranium production levels and costs of production. In addition, the prices of crude oil, natural gas and electricity produced from traditional hydro power and possibly other undiscovered energy sources could potentially have a negative impact on the competitiveness of nuclear energy companies in which the Fund invests.

Risk of Investing in the Energy Sector. The energy sector includes companies engaged in the exploration, production and distribution of energy sources and companies that manufacture or provide related equipment or services. Because

as currently constituted the Nuclear Energy Index is concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the Nuclear Energy Index is concentrated in the industrials sector, the Fund will be sensitive to changes in, and its performance will depend on to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic

MARKET VECTORS URANIUM+NUCLEAR ENERGY ETF (continued)

conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Utilities Sector. The utilities sector includes companies that produce or distribute electricity, gas or water. Because as currently constituted the utilities sector represents a significant portion of the Nuclear Energy Index, the Fund will be sensitive to changes in, and its performance may depend to a great extent on, the overall condition of the utilities sector. Companies in the utilities sector may be adversely affected by changes in exchange rates, domestic and international competition, difficulty in raising adequate amounts of capital and governmental limitation on rates charged to customers.

Risk of Investing in Foreign Issuers. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities.

Risk of Investing in Small- and Medium-Capitalization Companies. Small- and medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of small- and medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Issuer-Specific Changes Risk. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers. A change in the financial condition, market perception or credit rating of an issuer of securities included in the Nuclear Energy Index may cause the value of its securities to decline.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Nuclear Energy Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Nuclear Energy Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Nuclear Energy Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored in to the return of the Nuclear Energy Index, the Fund's return may deviate significantly from the return of the Nuclear Energy Index. In addition, the Fund may not be able to invest in certain securities included in the Nuclear Energy Index, or invest in them in the exact proportions

they represent of the Nuclear Energy Index, due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value (NAV) based on fair value prices and the value of Nuclear Energy Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Nuclear Energy Index is not based on fair value prices), the Fund's ability to track the Nuclear Energy Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Nuclear Energy Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Nuclear Energy Index it seeks to replicate is comprised of securities of a very limited number of companies.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Nuclear Energy Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Nuclear Energy Index, the Fund's assets are concentrated in the energy and industrials sectors and the nuclear energy industry; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on those sectors and industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by comparing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year, five years and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at vaneck.com/etf.

Annual Total Returns Calendar Years

Hao-Hung (Peter) Liao	Portfolio Manager	August 2007
George Cao	Portfolio Manager	December 2007

PURCHASE AND SALE OF FUND SHARES

For important information about the purchase and sale of Fund Shares and tax information, please turn to Summary Information about Purchases and Sales of Fund Shares and Taxes on page 55 of this Prospectus.

SUMMARY INFORMATION ABOUT PURCHASES AND SALES OF FUND SHARES AND TAXES

PURCHASE AND SALE OF FUND SHARES

The Funds issue and redeem Shares at NAV only in a large specified number of Shares each called a Creation Unit, or multiples thereof. A Creation Unit consists of 25,000 shares (with respect to Market Vectors Oil Services ETF) or 50,000 Shares (for each other Fund).

Individual Shares of a Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Funds are listed on NYSE Arca, Inc. (NYSE Arca) and because Shares trade at market prices rather than NAV, Shares of the Funds may trade at a price greater than or less than NAV.

TAX INFORMATION

Each Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS

PRINCIPAL INVESTMENT STRATEGIES

The Adviser anticipates that, generally, each Fund will hold all of the securities that comprise its Index in proportion to their weightings in such Index. However, under various circumstances, it may not be possible or practicable to purchase all of those securities in those weightings. In these circumstances, a Fund may purchase a sample of securities in its Index. There also may be instances in which the Adviser may choose to underweight or overweight a security in a Fund's Index, purchase securities not in the Fund's Index that the Adviser believes are appropriate to substitute for certain securities in such Index or utilize various combinations of other available investment techniques in seeking to replicate as closely as possible, before fees and expenses, the price and yield performance of the a Fund's Index. Each Fund may sell securities that are represented in its Index in anticipation of their removal from its Index or purchase securities not represented in its Index in anticipation of their addition to such Index. Each Fund may also, in order to comply with the tax diversification requirements of the Internal Revenue Code of 1986, as amended (Internal Revenue Code), temporarily invest in securities not included in its Index that are expected to be highly correlated with the securities included in its Index.

ADDITIONAL INVESTMENT STRATEGIES

Each Fund may invest in securities not included in its respective Index, money market instruments, including repurchase agreements or other funds which invest exclusively in money market instruments, convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index), and certain derivatives. Convertible securities and depositary receipts not included in a Fund's Index may be used by a Fund in seeking performance that corresponds to its respective Index and in managing cash flows, and may count towards compliance with the Fund's 80% policy. The Funds will not invest in money market instruments as part of a temporary defensive strategy to protect against potential stock market declines. Each Fund may also invest, to the extent permitted by the 1940 Act, in other affiliated and unaffiliated funds, such as open-end or closed-end management investment companies, including other exchange-traded funds (ETFs).

An authorized participant (*i.e.*, a person eligible to place orders with the Distributor (defined below) to create or redeem Creation Units of a Fund) that is not a qualified institutional buyer, as such term is defined under Rule 144A of the Securities Act of 1933, as amended (the Securities Act), will not be able to receive, as part of a redemption, restricted securities eligible for resale under Rule 144A.

BORROWING MONEY

Each Fund may borrow money from a bank up to a limit of one-third of the market value of its assets. To the extent that a Fund borrows money, it will be leveraged; at such times, the Fund will appreciate or depreciate in value more rapidly than its benchmark Index.

FUNDAMENTAL AND NON-FUNDAMENTAL POLICIES

Each Fund's investment objective and each of its other investment policies are non-fundamental policies that may be changed by the Board of Trustees without shareholder approval, except as noted in this Prospectus or the Statement of Additional Information (SAI) under the section entitled Investment Policies and Restrictions Investment Restrictions.

LENDING PORTFOLIO SECURITIES

Each Fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, a Fund receives liquid

collateral equal to at least 102% of the value of the portfolio securities being loaned. This collateral is marked-to-market on a daily basis. Although a Fund will receive collateral in connection with all loans of its securities holdings, the Fund would be exposed to a risk of loss should a borrower fail to return the borrowed securities (e.g., the Fund would have to buy replacement securities and the loaned securities may have appreciated beyond the value of the collateral held by the Fund) or become insolvent. A Fund may pay fees to the party arranging the loan of securities. In addition, a Fund will bear the risk of loss of any cash collateral that it invests.

RISKS OF INVESTING IN THE FUNDS

The following section provides additional information regarding the principal risks identified under **Principal Risks of Investing in the Fund** in each Fund's **Summary Information** section followed by additional risk information. The risks listed below are applicable to each Fund unless otherwise noted.

Investors in the Funds should be willing to accept a high degree of volatility in the price of the Funds' Shares and the possibility of significant losses. An investment in the Funds involves a substantial degree of risk. An investment in the Funds is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Funds.

Risk of Investing in Agriculture Investments. (Market Vectors Agribusiness ETF only.) Economic forces, including forces affecting the agricultural, commodity, energy and financial markets, as well as government policies and regulations affecting the agricultural sector and related industries, could adversely affect the Fund's portfolio companies and, thus, the Fund's financial situation and profitability. Agricultural production and trade flows are significantly affected by government policies and regulations. Companies involved in the agriculture industry may be subject to the risk of liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution control devices. An increased competitive landscape, caused by increased availability of food and other agricultural commodities, economic recession or labor difficulties, may lead to a decrease in demand for the products and services provided by companies involved in agriculture. Furthermore, companies involved in the agriculture industry are particularly sensitive to changing weather conditions and other natural disasters. In addition, these companies are also subject to risks associated with cyclicalities of revenues and earnings, economic recession, currency fluctuations, changing consumer tastes, extensive competition, consolidation, and excess capacity. In addition, the Fund's portfolio companies must comply with a broad range of environmental and food safety laws and regulations which could adversely affect the Fund. Additional or more stringent environmental and food safety laws and regulations may be enacted in the future and such changes could have a material adverse effect on the business of the Fund's portfolio companies.

Risk of Investing in the Coal Industry. (Market Vectors Coal ETF only.) The profitability of companies in the coal industry is related to worldwide energy prices, exploration and production spending. Such companies also are subject to risks of changes in exchange rates, international politics and government regulation, world events, terrorist attacks, depletion of resources and economic conditions, reduced demand as a result of increases in energy efficiency and energy conservation, as well as market, economic and political risks of the countries where energy companies are located or do business. Coal exploration and mining can be significantly affected by natural disasters. In addition, coal companies may be at risk for environmental damage claims and are subject to extensive federal, state and local environmental laws and regulations regarding air emissions and the disposal of hazardous materials. The productivity of mining operations may be reduced by geological conditions, regulatory permits for mining activities and the availability of coal that meets standards set forth in the Clean Air Act.

A primary risk of the coal industry is the competitive risk associated with the prices of alternative fuels, such as natural gas and oil. For example, consumers of coal often have the ability to switch between the use of coal, oil or natural gas. As a result, during periods when competing fuels are less expensive, the revenues of companies in the coal industry may decline with a corresponding impact on earnings.

Risk of Investing in the Alternative Energy Industry. (Market Vectors Global Alternative Energy ETF only.) Alternative energy refers to the generation of power through environmentally friendly sources that can replace or supplement traditional fossil-fuel sources. It includes power derived principally from bio fuels (such as ethanol), bio mass, wind, solar, hydro and geothermal sources and also includes the various technologies that support the production, use and storage of these sources.

The alternative energy industry may be significantly affected by the competition from new and existing market entrants, obsolescence of technology, short product cycles, varying prices and profits, commodity price volatility, changes in exchange rates, imposition of import controls, depletion of resources, technological developments and general economic conditions, fluctuations in energy prices and supply and demand of alternative energy fuels, energy conservation, the success of exploration projects and tax and other government regulations. Shares of companies involved in the alternative energy industry have been more volatile than shares of companies operating in more established industries. Certain valuation methods currently used to value companies involved in the alternative energy industries have not been in widespread use for a significant period of time. As a result, the use of these valuation methods may serve to further increase the volatility of certain alternative and transitional energy company share prices. If government subsidies and economic incentives for alternative energy sources are reduced or eliminated, the demand for alternative energy may decline and cause corresponding declines in the revenues and profits of companies

engaged in the alternative energy industry. In addition, changes in U.S., European and other governments' policies towards alternative energy technology also may have an adverse effect on the Fund's performance. Furthermore, the Fund may invest in the shares of companies with a limited operating history, some of which may never have operated profitably. Investment in young companies with a short operating history is generally riskier than investing in companies with a longer operating history. The Fund will carry greater risk and may be more volatile than a portfolio composed of securities issued by companies operating in a wide variety of different industries.

Risk of Investing in the Gold Mining Industry. (Market Vectors Gold Miners ETF only.) Because the Fund primarily invests in stocks and ADRs of companies that are involved in the gold mining industry, it is subject to certain risks associated with such companies. Competitive pressures may have a significant effect on the financial condition of such companies in the gold mining industry. Also, gold mining companies are highly dependent on the price of gold bullion. These prices may fluctuate substantially over short periods of time so the Fund's Share price may be more volatile than other types of investments. In times of significant inflation or great economic uncertainty, gold and other precious metals may outperform traditional investments such as bonds and stocks. However, in times of stable economic growth, traditional equity and debt investments could offer greater appreciation

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

potential and the value of gold and other precious metals may be adversely affected, which could in turn affect the Fund's returns. The production and sale of precious metals by governments or central banks or other larger holders can be affected by various economic, financial, social and political factors, which may be unpredictable and may have a significant impact on the supply and prices of precious metals. Economic and political conditions in those countries that are the largest producers of gold may have a direct effect on the production and marketing of gold and on sales of central bank gold holdings. Some gold and precious metals mining operation companies may hedge their exposure to falls in gold and precious metals prices by selling forward future production, which may result in lower returns during periods when the price of gold and precious metals increases. The gold and precious metals industry can be significantly affected by events relating to international political developments, the success of exploration projects, commodity prices and tax and government regulations. If a natural disaster or other event with a significant economic impact occurs in a region where the companies in which the Fund invests operate, such disaster or event could negatively affect the profitability of such companies and, in turn, the Fund's investment in them.

Risk of Investing in the Gold and Silver Mining Industries. (Market Vectors Junior Gold Miners ETF only.) Because the Fund invests in stocks and depositary receipts of U.S. and foreign companies that are involved in the gold mining and silver mining industries, it is subject to certain risks associated with such companies. Competitive pressures may have a significant effect on the financial condition of companies in the gold mining and silver mining industries. Also, gold and silver mining companies are highly dependent on the price of gold bullion and silver bullion, respectively. These prices may fluctuate substantially over short periods of time so the Fund's Share price may be more volatile than other types of investments.

In particular, a drop in the price of gold and/or silver bullion would particularly adversely affect the profitability of small- and medium-capitalization mining companies and their ability to secure financing. Furthermore, companies that are only in the exploration stage are typically unable to adopt specific strategies for controlling the impact of the price of gold. In times of significant inflation or great economic uncertainty, gold, silver and other precious metals may outperform traditional investments such as bonds and stocks. However, in times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the value of gold, silver and other precious metals may be adversely affected, which could in turn affect the Fund's returns. If a natural disaster or other event with a significant economic impact occurs in a region where the companies in which the Fund invests operate, such disaster or event could negatively affect the profitability of such companies and, in turn, the Fund's investment in them.

A significant amount of the companies in the Junior Gold Miners Index may be early stage mining companies that are in the exploration stage only or that hold properties that might not ultimately produce gold or silver. The exploration and development of mineral deposits involve significant financial risks over a significant period of time which even a combination of careful evaluation, experience and knowledge may not eliminate. Few properties which are explored are ultimately developed into producing mines. Major expenditures may be required to establish reserves by drilling and to construct mining and processing facilities at a site. In addition, many early stage miners operate at a loss and are dependent on securing equity and/or debt financing, which might be more difficult to secure for an early stage mining company than for a more established counterpart.

Risk of Investing in the Hard Assets Industry. (Market Vectors RVE Hard Assets Producers ETF only.) Because as currently constituted the Fund's Index is concentrated in the hard assets industry, the Fund is subject to risks associated with concentrating its investments in hard assets and the hard assets industry, including agriculture, alternatives (e.g., water and alternative energy), base and industrial metals, energy, forest products and precious metals, and can be significantly affected by events relating to these industries, including international political and economic developments, inflation, and other factors. The Fund's portfolio securities may experience substantial price fluctuations as a result of these factors, and may move independently of the trends of operating companies. Companies engaged in the sectors listed above may be adversely affected by changes in government policies and regulations, technological

advances and/or obsolescence and competition from new market entrants. Changes in general economic conditions, including commodity price volatility, changes in exchange rates, imposition of import controls, depletion of resources and labor relations, could adversely affect the Fund's portfolio companies. In addition, the companies in which the Fund invests may also be subject to the risks associated with the energy and basic materials sectors and mining and oil and gas industries.

Risk of Investing in the Oil Services Industry. (Market Vectors Oil Services ETF only.) The profitability of companies in the oil services industry is related to worldwide energy prices, including all sources of energy, and exploration and production spending. The price of energy, the earnings of companies in the oil services industry, and the value of such companies' securities can be extremely volatile. Such companies are also subject to risks of changes in exchange rates and the price of oil and gas, government regulation, world events, negative perception, depletion of resources and general economic conditions, as well as market, economic and political risks of the countries where oil services companies are located or do business. The values of securities of oil services companies are subject to swift price and supply fluctuations caused by events relating to international politics, including political instability and acts of war, energy conservation, the success of exploration projects and tax and other

governmental regulatory policies. Oil services companies operate in a highly competitive and cyclical industry, with intense price competition.

The oil services industry is exposed to significant and numerous operating hazards. Oil services companies' operations are subject to hazards inherent in the oil and gas industry, such as fire, explosion, blowouts, loss of well control and oil spills. Oil and gas exploration and production can be significantly affected by natural disasters and adverse weather conditions in the regions in which they operate. The revenues of oil services companies may be negatively affected by contract termination and renegotiation. In the oil services industry, it is customary for contracts to provide for either automatic termination or termination at the option of the customer if the drilling unit is destroyed or lost or if drilling operations are suspended for a specified period of time as a result of events beyond the control of either party or because of equipment breakdowns. In periods of depressed market conditions, the customers of oil services companies may not honor the terms of existing contracts and may terminate contracts or seek to renegotiate contract rates and terms to reduce their obligations.

Oil services companies are subject to, and may be adversely affected by, extensive federal, state, local and foreign laws, rules and regulations. Oil exploration and production companies may also be adversely affected by environmental damage claims. Laws and regulations protecting the environment may expose oil services companies to liability for the conduct of or conditions caused by others or for acts that were in compliance with all applicable laws at the time they were performed. The international operations of oil services companies expose them to risks associated with instability and changes in economic and political conditions, foreign currency fluctuations, changes in foreign regulations and other risks inherent to international business. Some of the companies in the Index are engaged in other lines of business unrelated to oil services, and they may experience problems with these lines of business which could adversely affect their operating results. The operating results of these companies may fluctuate as a result of these additional risks and events in the other lines of business. In addition, a company's ability to engage in new activities may expose it to business risks with which it has less experience than it has with the business risks associated with its traditional businesses. Despite a company's possible success in traditional oil services activities, there can be no assurance that the other lines of business in which these companies are engaged will not have an adverse effect on a company's business or financial condition.

Certain companies in which the Fund may invest are non-U.S. issuers whose securities are listed on U.S. exchanges. These securities involve risks beyond those associated with investments in U.S. securities, including greater market volatility, higher transactional costs, taxation by foreign governments and political instability.

Risk of Investing in the Oil and Gas Industry. (Market Vectors RVE Hard Assets Producers ETF and Market Vectors Unconventional Oil & Gas ETF only.) The profitability of companies in the oil and gas industry is related to worldwide energy prices, including all sources of energy, and exploration and production spending. The price of energy, the earnings of companies in the oil and gas industry, and the value of such companies' securities can be extremely volatile. Such companies are also subject to risks of changes in commodity prices, interest rates, exchange rates and the price of oil and gas, government regulation, world events, negative perception, depletion of resources, development of alternative energy sources, technological developments, labor relations and general economic conditions, as well as market, economic and political risks of the countries where oil and gas fluctuations caused by events relating to international politics, including political instability and acts of war, acts of terrorism, energy conservation, the success of exploration projects and tax and other governmental regulatory policies. Oil and gas companies operate in a highly competitive and cyclical industry, with intense price competition. A significant portion of their revenues may depend on a relatively small number of customers, including governmental entities and utilities.

The oil and gas industry is exposed to significant and numerous operating hazards. Oil and gas companies' operations are subject to hazards inherent in the oil and gas industry, such as fire, explosion, blowouts, loss of well control and oil spills. Oil and gas exploration and production can be significantly affected by natural disasters and adverse weather conditions in the regions in which they operate. The revenues of oil and gas companies may be negatively affected by

contract termination and renegotiation.

Oil and gas companies are subject to, and may be adversely affected by, extensive federal, state, local and foreign laws, rules and regulations. Oil and gas exploration and production companies may also be adversely affected by environmental damage claims. Laws and regulations protecting the environment may expose oil and gas companies to liability for the conduct of or conditions caused by others or for acts that were in compliance with all applicable laws at the time they were performed. The international operations of oil and gas companies expose them to risks associated with instability and changes in economic and political conditions, foreign currency fluctuations, changes in foreign regulations and other risks inherent to international business. Such companies may also have significant capital investments or operations in emerging market countries, which may increase these risks.

Risk of Investing in Unconventional Oil and Gas. (Market Vectors Unconventional Oil & Gas ETF only.) Investments in companies engaged in activities related to the exploration, development, extraction, production and/or refining of unconventional oil and natural gas involve risks in addition to those related to the oil and gas industry. New or emerging oil and gas resource

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

development projects have limited or no production history. Consequently, an oil and gas company may be unable to accurately predict future results. Therefore, the cost of drilling, completing and operating wells in these areas may be higher than initially expected, and the value of undeveloped land may decline if drilling results are unsuccessful. Furthermore, if drilling results are unsuccessful, an oil and gas company may be required to write down the carrying value of undeveloped land in new or emerging projects, which may have an adverse affect on the Fund's investments. Unconventional oil and gas properties are subject to customary royalty interests, liens incidental to operating agreements, tax liens and other burdens, encumbrances, easements or restrictions. Unless production is established during the term of certain undeveloped oil and gas leases, the leases will expire, and an oil and gas company will lose its right to develop the related properties. The marketability of unconventional oil and gas production depends in large part on the availability, proximity and capacity of pipeline systems owned by third parties. The lack of available capacity on these systems and facilities could reduce production of profitable wells or delay or discontinue drilling plans.

Companies engaged in activities related to the exploration, development, extraction, production and/or refining of unconventional oil and natural gas are subject to extensive environmental requirements. Failure to comply with applicable environmental requirements could adversely affect such companies, as sanctions for failure to comply with such requirements may include administrative, civil and criminal penalties; revocation of permits to conduct business; and corrective action orders, including orders to investigate and/or clean up contamination. Liability for cleanup costs, natural resources damages and other damages arising as a result of environmental laws could be substantial and adversely affect such companies. Such companies are also subject to political and economic instability and the risk of government actions. Additionally, the operations of such companies subject to, and may be adversely affected by, extensive federal, state, local and foreign laws, rules and regulations.

The use of methods such as hydraulic fracturing may be subject to new or different regulation in the future. Currently, the regulation of hydraulic fracturing is primarily conducted at the state level through permitting and other compliance requirements. Any new federal, state or local regulations that may be imposed on hydraulic fracturing could result in additional permitting and disclosure requirements (including of substances used in the fracturing process) and in additional operating restrictions. Some states and local governments have considered imposing various conditions and restrictions on operations, including bans, which could lead to operational delays and increased costs and, moreover, could delay or effectively prevent the development of oil and gas from formations that would not be economically viable without the use of hydraulic fracturing. The use of hydraulic fracturing may produce certain wastes that are not subject to federal regulations governing hazardous wastes, though they may be regulated under other federal and state laws. These wastes may in the future be designated as hazardous wastes and may thus become subject to more rigorous and costly compliance and disposal requirements.

Risk of Investing in Rare Earth and Strategic Metals. (Market Vectors Rare Earth/Strategic Metals ETF only.) Rare earth/strategic metals are industrial metals that are typically mined as by-products or secondary metals in operations focused on precious metals and base metals. Compared to base metals, they have more specialized uses and are often more difficult to extract. Currently, approximately 49 elements in the periodic table are considered rare earth/strategic metals. Rare earth metals (or rare earth elements), a subset of strategic metals, are a collection of chemical elements that are crucial to many of the world's most advanced technologies. Rare earth/strategic metals are used in a variety of technologies including, but not limited to, cellular phones, high performance batteries, flat screen televisions, and green energy technology such as wind, solar and geothermal, and are expected to be critical to the future of hybrid and electric cars, high-tech military applications including radar, missile guidance systems, navigation and night vision, and superconductors and fiber-optic communication systems.

The use of rare earth/strategic metals in modern technology has increased dramatically over the past years. Consequently, the demand for strategic metals has from time to time strained the supply, and, as a result, there is a risk

of a shortage of such materials in the world which could adversely affect the companies in the Fund's portfolio. Competitive pressures may have a significant effect on the financial condition of companies involved in the various activities that are related to the producing, refining and recycling of rare earth/strategic metals. Also, these companies are highly dependent on the demand for and price of rare earth/strategic metals which may fluctuate substantially over short periods of time, so the Fund's Share price may be more volatile than other types of investments.

Companies involved in the various activities that are related to the producing, refining and recycling of rare earth/strategic metals tend to be small- to medium-capitalization companies with volatile share prices and can be significantly affected by events relating to international political and economic developments, energy conservation, the success of exploration projects, commodity prices, and tax and other government regulations. Moreover, some companies may be subject to the risks generally associated with extraction of natural resources, such as the risks of mining, and the risks of the hazards associated with metals and mining, such as fire, drought, and increased regulatory and environmental costs. The producing, refining and recycling of rare earth/strategic metals can be capital intensive and, if companies involved in such activities are not managed well, the share prices of such companies could decline even as prices for the underlying rare earth/strategic metals are rising. In addition, companies involved in the various activities that are related to the producing, refining and recycling of rare earth/strategic metals

may be at risk for environmental damage claims. Furthermore, demand for rare earth/strategic metals may change rapidly and unpredictably, including in light of the development of less expensive alternatives.

Risks of Investing in the Materials Sub-Industry. (Market Vectors Rare Earth/Strategic Metals ETF only.) To the extent the Rare Earth/Strategic Metals Index includes securities of issuers in the materials sub-industry of the strategic metals industry, the Rare Earth/Strategic Metals ETF will invest in companies in such sub-industry. Companies engaged in the production and distribution of materials may be adversely affected by world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Real Estate Industry. (Market Vectors Unconventional Oil & Gas ETF only.) Companies in the real estate industry include companies that invest in real estate, such as REITs and real estate management and development companies. Because the Oil & Gas Index includes securities of issuers in the real estate industry, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the real estate industry. Companies that invest in real estate are subject to the risks of owning real estate directly as well as to risks that relate specifically to the way that such companies operate, including management risk (such companies are dependent upon the management skills of a few key individuals and may have limited financial resources). Adverse economic, business or political developments affecting real estate could have an effect on the value of the Fund's investments. Investing in real estate is subject to such risks as decreases in real estate values, overbuilding, increased competition and other risks related to local or general economic conditions, increases in operating costs and property taxes, changes in zoning laws, casualty or condemnation losses, possible environmental liabilities, regulatory limitations on rent, possible lack of availability of mortgage financing, fluctuations in rental income and extended vacancies of properties.

Risk of Investing in the Solar Energy Industry. (Market Vectors Solar Energy ETF only.) Companies engaged in the solar energy industry may be significantly affected by increased competition from new and existing market entrants, technological developments, obsolescence of technology and short product cycles. In addition, the solar energy industry is at a relatively early stage of development and the extent to which solar energy will be widely adopted is uncertain. Companies in this industry may also be significantly affected by general economic conditions such as varying prices and profits, commodity price volatility, changes in exchange rates, imposition of import controls, depletion of resources, fluctuations in energy prices and supply and demand of alternative energy fuels, energy conservation, labor relations and tax and other government regulations. Shares of companies involved in the solar energy industry have historically been more volatile than shares of companies operating in more established industries. Certain valuation methods currently used to value companies involved in the solar energy industry have not been in widespread use for a significant period of time. As a result, the use of these valuation methods may serve to further increase the volatility of certain solar energy company share prices. If government subsidies and economic incentives for alternative energy sources, particularly solar power, are reduced or eliminated, the demand for solar energy may decline and cause corresponding declines in the revenues and profits of companies engaged in the solar energy industry. In addition, changes in U.S., European and other governments' policies towards solar energy technology also may have an adverse effect on the Fund's performance.

Risk of Investing in the Steel Industry. (Market Vectors Steel ETF only.) Because the Fund primarily invests in stocks and ADRs of companies that are involved in a variety of activities related to steel production, it is subject to certain risks associated with such companies. Competitive pressures may have a significant effect on the financial condition of such companies in the steel industry. Also, these companies are highly dependent on the price of steel. These prices may fluctuate substantially over short periods of time, so the Fund's Share price may be more volatile than other types of investments. These companies are also affected by changes in government regulation, world events and economic conditions. Companies involved in the steel industry may benefit from government subsidies or certain trade protections. If those subsidies or trade protections are reduced or removed, the profits of companies engaged in the steel industry may be affected, potentially drastically. In addition, these companies are at risk for environmental

damage claims. Weather conditions, a strong or weak domestic economy and the price levels of competing sources of fuel, political instability and conservation efforts may affect the demand for steel. Companies involved in the manufacturing and storage of iron and steel products are also impacted by the level and volatility of commodity prices, the exchange value of the dollar, import controls, worldwide competition, depletion of resources and mandated expenditures for safety and pollution control devices.

Risk of Investing in the Nuclear Energy Industry. (Market Vectors Uranium+Nuclear Energy ETF only.) The companies represented in the Fund's portfolio may face considerable risk as a result of, among other risks, incidents and accidents, breaches of security, ill-intentioned acts or terrorism, air crashes, natural disasters (such as floods or earthquakes), equipment malfunctions or mishandling in storage, handling, transportation, treatment or conditioning of substances and nuclear materials. Such events could have serious consequences, especially in case of radioactive contamination and irradiation of the environment, for the general population, as well as a material, negative impact on the Fund's portfolio companies and thus the Fund's financial

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

situation. The March 2011 nuclear power plant catastrophe in Japan may have far-reaching effects on the nuclear energy industry, the extent of which are unknown. In addition, the nuclear energy industry is subject to competitive risk associated with the prices of other energy sources, such as natural gas and oil, obsolescence of existing technology, short product cycles, falling prices and profits, competition from new market entrants and general economic conditions. Consumers of nuclear energy may have the ability to switch between the nuclear energy and other energy sources and, as a result, during periods when competing energy sources are less expensive, the revenues of companies in the nuclear energy industry may decline with a corresponding impact on earnings.

Nuclear activity is also subject to particularly detailed and restrictive regulations, with a scheme for the monitoring and periodic re-examination of operating authorization, which primarily takes into account nuclear safety, environmental and public health protection, and also national safety considerations (terrorist threats in particular). These regulations may be subject to significant tightening by national and international authorities. There are substantial differences among the regulatory practices and policies of various jurisdictions, and any given regulatory agency may make major shifts in policy from time to time. There is no assurance that regulatory authorities will, in the future, grant rate increases or that such increases will be adequate to permit the payment of dividends on common stocks issued by a utility company. Additionally, existing and possible future regulatory legislation may make it even more difficult for utilities to obtain adequate relief. In addition, governmental authorities may from time to time review existing policies and impose additional requirements governing the licensing, construction and operation of nuclear power plants. This could result in increased operating costs, which would have a negative impact on the Fund's portfolio companies and may cause operating businesses related to nuclear energy to become unprofitable or impractical to operate.

Uranium prices are subject to fluctuation. The price of uranium has been and will continue to be affected by numerous factors beyond the Fund's control. Such factors include the demand for nuclear power, political and economic conditions in uranium producing and consuming countries, uranium supply from secondary sources and uranium production levels and costs of production. In addition, the prices of crude oil, natural gas and electricity produced from traditional hydro power and possibly other undiscovered energy sources could potentially have a negative impact on the competitiveness of nuclear energy companies in which the Fund invests.

Securities of the companies involved in this industry have been significantly more volatile than securities of companies operating in other more established industries. Certain valuation methods currently used to value companies involved in the nuclear power and power technology sectors, particularly those companies that have not yet traded profitably, have not been in widespread use for a significant period of time. As a result, the use of these valuation methods may serve to increase further the volatility of certain alternative power and power technology company share prices.

Risk of Regulatory Action and Changes in Governments. (Market Vectors Rare Earth/Strategic Metals ETF only.) The producing, refining and recycling of rare earth/strategic metals may be significantly affected by regulatory action and changes in governments. For example, China, which produces more than 90% of the world's rare earth supplies, has implemented a reduction in its export quota of rare earth/strategic metals and has considered a complete ban on the export of such metals. The Chinese government's plan of a further reduction in the export of rare earth/strategic metals, as well as the Chinese government's consideration of a complete ban on the export of such materials and other similar actions by other countries essential to the producing, refining and recycling of rare earth/strategic metals could have a significant adverse effect on industries around the globe and on the values of the businesses in which the Fund invests. Moreover, while it is expected that China will consume most if not all, of the rare earth/strategic metals produced within the country to support its growing economy, China has shown a willingness to flood the market for rare earth/strategic metals as it did in the late 1990s, thereby causing many operations to shut down.

Risk of Investing in the Mining Industry. Because the Market Vectors Coal ETF, Market Vectors Gold Miners ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Rare Earth/Strategic Metals ETF, Market Vectors RVE Hard Assets Producers ETF and Market Vectors Steel ETF invest in stocks and depositary receipts of U.S. and foreign companies that are involved in mining, they are subject to certain risks associated with such companies. Competitive pressures may have a significant effect on the financial condition of such companies. Mining companies are highly dependent on the price of the underlying metal or element. These prices may fluctuate substantially over short periods of time so the Fund's Share price may be more volatile than other types of investments.

In particular, a drop in the price of gold, silver bullion, steel or rare earth/strategic metals would particularly adversely affect the profitability of small- and medium-capitalization mining companies and their ability to secure financing. Furthermore, companies that are only in the exploration stage are typically unable to adopt specific strategies for controlling the impact of such price changes.

Some of the companies in a Fund's Index may be early stage mining companies that are in the exploration stage only or that hold properties that might not ultimately produce these metals. Exploration and development involves significant financial risks

over a significant period of time which even a combination of careful evaluation, experience and knowledge may not eliminate. Few properties which are explored are ultimately developed into producing mines. Major expenditures may be required to establish reserves by drilling and to construct mining and processing facilities at a site. In addition, many early stage miners operate at a loss and are dependent on securing equity and/or debt financing, which might be more difficult to secure for an early stage mining company than for a more established counterpart.

Risk of Investing in the Basic Materials Sector. (Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Gold Miners ETF, Market Vectors Junior Gold Miners ETF, Market Vectors RVE Hard Assets Producers ETF and Market Vectors Steel ETF only.) The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because each Fund's respective Index includes securities of issuers in the basic materials sector, the Fund will be sensitive to changes in, and their performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in the Consumer Staples Sector. (Market Vectors Agribusiness ETF only.) The consumer staples sector includes, among others, manufacturers and distributors of food, beverages and tobacco, food and drug retailers and products of non-durable household goods and consumer products. Because as currently constituted the Agribusiness Index is concentrated in the consumer staples sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the consumer staples sector. These companies may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending. Companies in this sector are also affected by changes in government regulation, world events and economic conditions.

Risk of Investing in the Energy Sector. (Market Vectors Coal ETF, Market Vectors Global Alternative Energy ETF, Market Vectors Oil Services ETF, Market Vectors RVE Hard Assets Producers ETF, Market Vectors Solar Energy ETF, Market Vectors Unconventional Oil & Gas ETF and Market Vectors Uranium+Nuclear Energy ETF only.) To the extent a Fund's Index includes securities of issuers in the energy sector, such Fund will invest in companies in such sector. As such, the Fund may be sensitive to changes in, and its performance may depend on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility and the cost of providing the specific utility services. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

Risk of Investing in the Industrials Sector. (Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Global Alternative Energy ETF and Market Vectors Uranium+Nuclear Energy ETF only.) The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because each Fund's respective Index includes securities of issuers in the industrials sector, the Funds will be sensitive to changes in, and their performance will depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates. The stock prices of companies in the industrials sector are affected by supply and demand both for their specific product or service and for industrial sector products in general. The products of manufacturing companies may face product obsolescence due to rapid technological developments and frequent new product introduction. In addition, the industrials sector may also be adversely affected by changes or

trends in commodity prices, which may be influenced or characterized by unpredictable factors.

Risks of Investing in the Information Technology Sector. (Market Vectors Global Alternative Energy ETF, Market Vectors RVE Hard Assets Producers ETF and Market Vectors Solar Energy ETF only.) The information technology sector includes software developers, providers of information technology consulting and services and manufacturers and distributors of computers, peripherals, communications equipment and semiconductors. Because each Fund's respective Index includes securities of issuers in the information technology sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the information technology sector. Information technology companies face intense competition, both domestically and internationally, which may have an adverse affect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face product obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in

**ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)**

growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent protection and the expiration of patents may adversely affect the profitability of these companies.

Risk of Investing in the Utilities Sector. (Market Vectors Global Alternative Energy ETF and Market Vectors Uranium+Nuclear Energy ETF only.) The utilities sector includes companies that produce or distribute electricity, gas or water. Because each Fund's respective Index includes securities of issuers in the utilities sector, the Fund will be sensitive to changes in, and its performance may depend to a great extent on, the overall condition of the utilities sector. Issuers in the utilities sector are subject to a variety of factors that may adversely affect their business or operations, including high interest costs in connection with capital construction and improvement programs, difficulty in raising capital in adequate amounts on reasonable terms in periods of high inflation and unsettled capital markets, and the effects of economic slowdowns and surplus capacity. Companies in the utilities sector are subject to extensive regulation, including governmental regulation of rates charged to customers, and may face difficulty in obtaining regulatory approval of new technologies. The effects of a U.S. national energy policy and lengthy delays and greatly increased costs and other problems associated with the design, construction, licensing, regulation and operation of nuclear facilities for electric generation, including, among other considerations, the problems associated with the use of radioactive materials and the disposal of radioactive wastes, may adversely affect companies in the utilities sector. Certain companies in the utilities sector may be inexperienced and may suffer potential losses resulting from a developing deregulatory environment. Technological innovations may render existing plants, equipment or products obsolete. Companies in the utilities sector may face increased competition from other providers of utility services. The potential impact of terrorist activities on companies in the utilities sector and its customers and the impact of natural or man-made disasters may adversely affect the utilities sector. Issuers in the utilities sector also may be subject to regulation by various governmental authorities and may be affected by the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards.

Risk of Investing in Foreign Issuers. Each Fund may invest in foreign securities. Investments in the securities, including depositary receipts, of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact a Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, a Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Because a Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund from these investments will generally be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The values of the currencies of the countries in which a Fund may invest may be subject to a high degree of fluctuation due to changes in interest rates, the effects of monetary policies issued by the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. Therefore, a Fund's exposure to foreign currencies may result in reduced returns to the Fund. Moreover, a Fund may incur costs in connection with conversions between U.S.

dollars and foreign currencies. Each Fund may, but is not obligated to, invest in derivative instruments to lock in certain currency exchange rates from time to time.

Risk of Investing in Emerging Market Issuers. (Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Global Alternative Energy ETF and Market Vectors Rare Earth/Strategic Metals ETF only.) Each Fund may invest its assets in securities of emerging market issuers. Investment in securities of emerging market issuers involves risks not typically associated with investments in securities of issuers in more developed countries that may negatively affect the value of your investment in the Fund. Such heightened risks may include, among others, expropriation and/or nationalization of assets, restrictions on and government intervention in international trade, confiscatory taxation, political instability, including authoritarian and/or military involvement in governmental decision making, armed conflict, the impact on the economy as a result of civil war, and social instability as a result of religious, ethnic and/or socioeconomic unrest. Issuers in certain emerging market countries are subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are issuers in more developed markets, and therefore, all material information may not be available or reliable. Additionally, each of the factors described below could have a negative impact on the Fund's performance and increase the volatility of the Fund.

Securities Markets. Securities markets in emerging market countries are underdeveloped and are often considered to be less correlated to global economic cycles than those markets located in more developed countries. Securities markets in emerging market countries are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations, uncertainty regarding the existence of trading markets, governmental control and heavy regulation of labor and industry. These factors, coupled with restrictions on foreign investment and other factors, limit the supply of securities available for investment by a Fund. This will affect the rate at which a Fund is able to invest in emerging countries, the purchase and sale prices for such securities and the timing of purchases and sales. Emerging markets can experience high rates of inflation, deflation and currency devaluation. The prices of certain securities listed on securities markets in emerging market countries have been subject to sharp fluctuations and sudden declines and no assurance can be given as to the future performance of listed securities in general. Volatility of prices may be greater than in more developed securities markets. Moreover, securities markets in emerging market countries may be closed for extended periods of time or trading on securities markets may be suspended altogether due to political or civil unrest. Market volatility may also be heightened by the actions of a small number of investors. Brokerage firms in emerging market countries may be fewer in number and less established than brokerage firms in more developed markets. Since the Fund may need to effect securities transactions through these brokerage firms, the Fund is subject to the risk that these brokerage firms will not be able to fulfill their obligations to the Fund. This risk is magnified to the extent the Fund effects securities transactions through a single brokerage firm or a small number of brokerage firms. In addition, the infrastructure for the safe custody of securities and for purchasing and selling securities, settling trades, collecting dividends, initiating corporate actions, and following corporate activity is not as well developed in emerging market countries as is the case in certain more developed markets.

Political and Economic Risk. Certain emerging market countries have historically been subject to political instability and their prospects are tied to the continuation of economic and political liberalization in the region. Instability may result from factors such as government or military intervention in decision making, terrorism, civil unrest, extremism or hostilities between neighboring countries. Any of these factors, including an outbreak of hostilities, could negatively impact the Fund's returns. Limited political and democratic freedoms in emerging market countries might cause significant social unrest. These factors may have a significant adverse effect on an emerging market country's economy.

Many emerging market countries may be heavily dependent upon international trade and, consequently, may continue to be negatively affected by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which it trades. They also have been and may continue to be adversely affected by economic conditions in the countries with which they trade. In addition, certain issuers located in emerging market countries in which the Fund invests may operate in, or have dealings with, countries subject to sanctions and/or embargoes imposed by the U.S. Government and the United Nations and/or countries identified by the U.S. Government as state sponsors of terrorism. As a result, an issuer may sustain damage to its reputation if it is identified as an issuer which operates in, or has dealings with, such countries. The Fund, as an investor in such issuers, will be indirectly subject to those risks.

Investment and Repatriation Restrictions. The government in an emerging market country may restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in such emerging market countries. These restrictions and/or controls may at times limit or prevent foreign investment in securities of issuers located or operating in emerging market countries and may inhibit the Fund's ability to track its Index. In addition, the Fund may not be able to buy or sell securities or receive full value for such securities. Moreover, certain emerging market countries may require governmental approval or special licenses prior to investments by foreign investors and may limit the amount of investments by foreign investors in a particular industry and/or issuer; may limit such foreign investment to a certain class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of such emerging market countries; and/or may impose additional taxes on foreign investors. A delay in obtaining a required government approval or a license would delay investments

in those emerging market countries, and, as a result, the Fund may not be able to invest in certain securities while approval is pending. The government of certain emerging market countries may also withdraw or decline to renew a license that enables the Fund to invest in such country. These factors make investing in issuers located or operating in emerging market countries significantly riskier than investing in issuers located or operating in more developed countries, and any one of them could cause a decline in the value of the Fund's Shares.

Additionally, investments in issuers located in certain emerging market countries may be subject to a greater degree of risk associated with governmental approval in connection with the repatriation of investment income, capital or the proceeds of sales of securities by foreign investors. Moreover, there is the risk that if the balance of payments in an emerging market country declines, the government of such country may impose temporary restrictions on foreign capital remittances.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

Consequently, the Fund could be adversely affected by delays in, or a refusal to grant, required governmental approval for repatriation of capital, as well as by the application to the Fund of any restrictions on investments. Furthermore, investments in emerging market countries may require the Fund to adopt special procedures, seek local government approvals or take other actions, each of which may involve additional costs to the Fund.

Available Disclosure About Emerging Market Issuers. Issuers located or operating in emerging market countries are not subject to the same rules and regulations as issuers located or operating in more developed countries. Therefore, there may be less financial and other information publicly available with regard to issuers located or operating in emerging market countries and such issuers are not subject to the uniform accounting, auditing and financial reporting standards applicable to issuers located or operating in more developed countries.

Foreign Currency Considerations. A Fund's assets that are invested in equity securities of issuers in emerging market countries will generally be denominated in foreign currencies, and the income received by the Fund from those investments will be principally in foreign currencies. The value of an emerging market country's currency may be subject to a high degree of fluctuation. This fluctuation may be due to changes in interest rates, the effects of monetary policies issued by the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. The economies of certain emerging market countries can be significantly affected by currency devaluations. Certain emerging market countries may also have managed currencies which are maintained at artificial levels relative to the U.S. dollar rather than at levels determined by the market. This type of system can lead to sudden and large adjustments in the currency which, in turn, can have a disruptive and negative effect on foreign investors.

A Fund's exposure to an emerging market country's currency and changes in value of such foreign currencies versus the U.S. dollar may reduce the Fund's investment performance and the value of your investment in the Fund. Meanwhile, the Fund will compute and expects to distribute its income in U.S. dollars, and the computation of income will be made on the date that the income is earned by the Fund at the foreign exchange rate in effect on that date. Therefore, if the value of the respective emerging market country's currency falls relative to the U.S. dollar between the earning of the income and the time at which the Fund converts the relevant emerging market country's currency to U.S. dollars, the Fund may be required to liquidate certain positions in order to make distributions if the Fund has insufficient cash in U.S. dollars to meet distribution requirements under the U.S. Internal Revenue Code of 1986, as amended (the Internal Revenue Code). The liquidation of investments, if required, could be at disadvantageous prices or otherwise have an adverse impact on the Fund's performance.

Certain emerging market countries also restrict the free conversion of their currency into foreign currencies, including the U.S. dollar. There is no significant foreign exchange market for many such currencies and it would, as a result, be difficult for a Fund to engage in foreign currency transactions designed to protect the value of the Fund's interests in securities denominated in such currencies. Furthermore, if permitted, the Fund may incur costs in connection with conversions between U.S. dollars and an emerging market country's currency. Foreign exchange dealers realize a profit based on the difference between the prices at which they are buying and selling various currencies. Thus, a dealer normally will offer to sell a foreign currency to the Fund at one rate, while offering a lesser rate of exchange should the Fund desire immediately to resell that currency to the dealer. The Fund will conduct its foreign currency exchange transactions either on a spot (*i.e.*, cash) basis at the spot rate prevailing in the foreign currency exchange market, or through entering into forward, futures or options contracts to purchase or sell foreign currencies.

Operational and Settlement Risk. In addition to having less developed securities markets, emerging market countries have less developed custody and settlement practices than certain developed countries. Rules adopted under the 1940 Act permit the Fund to maintain its foreign securities and cash in the custody of certain eligible non-U.S. banks and securities depositories. Banks in emerging market countries that are eligible foreign sub custodians may be recently

organized or otherwise lack extensive operating experience. In addition, in certain emerging market countries there may be legal restrictions or limitations on the ability of the Fund to recover assets held in custody by a foreign sub-custodian in the event of the bankruptcy of the sub-custodian. Because settlement systems in emerging market countries may be less organized than in other developed markets, there may be a risk that settlement may be delayed and that cash or securities of the Fund may be in jeopardy because of failures of or defects in the systems. Under the laws in many emerging market countries, the Fund may be required to release securities before receiving cash payment or may be required to make cash payment prior to receiving securities, creating a risk that the Fund may surrender cash or securities without ever receiving securities or cash from the other party. Settlement systems in emerging market countries also have a higher risk of failed trades and back to back settlements may not be possible.

The Fund may not be able to convert a foreign currency to U.S. dollars in time for the settlement of redemption requests. In the event of a redemption request from an authorized participant, the Fund will be required to deliver U.S. dollars to the

authorized participant on the settlement date. In the event that the Fund is not able to convert the foreign currency to U.S. dollars in time for settlement, which may occur as a result of the delays described above, the Fund may be required to liquidate certain investments and/or borrow money in order to fund such redemption. The liquidation of investments, if required, could be at disadvantageous prices or otherwise have an adverse impact on the Fund's performance (e.g., by causing the Fund to overweight foreign currency denominated holdings and underweight other holdings which were sold to fund redemptions). In addition, the Fund will incur interest expense on any borrowings and the borrowings will cause the Fund to be leveraged, which may magnify gains and losses on its investments.

In certain emerging market countries, the marketability of quoted shares may be limited due to the restricted opening hours of stock exchanges, and a narrow range of investors and a relatively high proportion of market value may be concentrated in the hands of a relatively small number of shareholders. In addition, because certain emerging market countries' stock exchanges on which the Fund's portfolio securities may trade are open when the NYSE Arca is closed, the Fund may be subject to heightened risk associated with market movements. Trading volume may be lower on certain emerging market countries' stock exchanges than on more developed securities markets and equities may be generally less liquid. The infrastructure for clearing, settlement and registration on the primary and secondary markets of certain emerging market countries are less developed than in certain other markets and under certain circumstances this may result in the Fund experiencing delays in settling and/or registering transactions in the markets in which it invests, particularly if the growth of foreign and domestic investment in certain emerging market countries places an undue burden on such investment infrastructure. Such delays could affect the speed with which the Fund can transmit redemption proceeds and may inhibit the initiation and realization of investment opportunities at optimum times.

Certain issuers in emerging market countries may utilize share blocking schemes. Share blocking refers to a practice, in certain foreign markets, where voting rights related to an issuer's securities are predicated on these securities being blocked from trading at the custodian or sub custodian level, for a period of time around a shareholder meeting. These restrictions have the effect of barring the purchase and sale of certain voting securities within a specified number of days before and, in certain instances, after a shareholder meeting where a vote of shareholders will be taken. Share blocking may prevent the Fund from buying or selling securities for a period of time. During the time that shares are blocked, trades in such securities will not settle. The blocking period can last up to several weeks. The process for having a blocking restriction lifted can be quite onerous with the particular requirements varying widely by country. In addition, in certain countries, the block cannot be removed. As a result of the ramifications of voting ballots in markets that allow share blocking, the Adviser, on behalf of the Fund, reserves the right to abstain from voting proxies in those markets.

Corporate and Securities Laws. Securities laws in emerging market countries are relatively new and unsettled and, consequently, there is a risk of rapid and unpredictable change in laws regarding foreign investment, securities regulation, title to securities and shareholder rights. Accordingly, foreign investors may be adversely affected by new or amended laws and regulations. In addition, the systems of corporate governance to which emerging market issuers are subject may be less advanced than those systems to which issuers located in more developed countries are subject, and therefore, shareholders of issuers located in emerging market countries may not receive many of the protections available to shareholders of issuers located in more developed countries. In circumstances where adequate laws and shareholder rights exist, it may not be possible to obtain swift and equitable enforcement of the law. In addition, the enforcement of systems of taxation at federal, regional and local levels in emerging market countries may be inconsistent and subject to sudden change.

Special Risk Considerations of Investing in Chinese Issuers. (Market Vectors Coal ETF and Market Vectors Solar Energy ETF only.) Investment in securities of Chinese issuers, including issuers located outside of China that generate significant revenues from China, involves certain risks and special considerations, including the following:

Political and Economic Risk. The economy of China, which has been in a state of transition from a planned economy to a more market oriented economy, differs from the economies of most developed countries in many respects,

including the level of government involvement, its state of development, its growth rate, control of foreign exchange, and allocation of resources. Although the majority of productive assets in China are still owned by the PRC government at various levels, in recent years, the PRC government has implemented economic reform measures emphasizing utilization of market forces in the development of the economy of China and a high level of management autonomy. The economy of China has experienced significant growth in the past 20 years, but growth has been uneven both geographically and among various sectors of the economy. Economic growth has also been accompanied by periods of high inflation. The PRC government has implemented various measures from time to time to control inflation and restrain the rate of economic growth.

Political changes, social instability and adverse diplomatic developments in the PRC could result in the imposition of additional government restrictions including expropriation of assets, confiscatory taxes or nationalization of some or all of the property held by the underlying issuers of the bonds in the Index.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

Since 1949, the PRC has been a socialist state controlled by the Communist party. China has only recently opened up to foreign investment and has only begun to permit private economic activity. There is no guarantee that the Chinese government will not revert from its current open-market economy to the economic policy of central planning that it implemented prior to 1978.

The Chinese government continues to be an active participant in many economic sectors through ownership positions and regulation. The allocation of resources in China is subject to a high level of government control. The Chinese government strictly regulates the payment of foreign currency denominated obligations and sets monetary policy. Through its policies, the government may provide preferential treatment to particular industries or companies. The policies set by the government could have a substantial effect on the Chinese economy.

Inflation. Economic growth in China has also historically been accompanied by periods of high inflation. Beginning in 2004, the Chinese government commenced the implementation of various measures to control inflation, which included the tightening of the money supply, the raising of interest rates and more stringent control over certain industries. If these measures do not continue to be successful, and if inflation were to steadily increase, the performance of the Chinese economy and the Fund's investments could be negatively impacted.

Nationalization and Expropriation. After the formation of the Chinese socialist state in 1949, the Chinese government renounced various debt obligations and nationalized private assets without providing any form of compensation. There can be no assurance that the Chinese government will not take similar actions in the future. Accordingly, an investment in the Fund involves a risk of a total loss.

Available Disclosure About Chinese Companies. Disclosure and regulatory standards in emerging market countries, such as China, are in many respects less stringent than U.S. standards. There is substantially less publicly available information about Chinese issuers than there is about U.S. issuers. Therefore, disclosure of certain material information may not be made, and less information may be available to the Fund and other investors than would be the case if the Fund's investments were restricted to securities of U.S. issuers. Chinese issuers are subject to accounting, auditing and financial standards and requirements that differ, in some cases significantly, from those applicable to U.S. issuers. In particular, the assets and profits appearing on the financial statements of a Chinese issuer may not reflect its financial position or results of operations in the way they would be reflected had such financial statements been prepared in accordance with U.S. Generally Accepted Accounting Principles.

Foreign Currency Considerations. Emerging markets such as China can experience high rates of inflation, deflation and currency devaluation. The value of the securities of Chinese issuers may be subject to a high degree of fluctuation. The Fund invests a significant portion of its assets in investments denominated in RMB and the income received by the Fund will principally be in RMB. The value of the RMB may be subject to a high degree of fluctuation due to changes in interest rates, the effects of monetary policies issued by the PRC, the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. The Fund's exposure to the Chinese RMB and changes in value of the Chinese RMB versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and RMB. Foreign exchange dealers realize a profit based on the difference between the prices at which they are buying and selling various currencies. Thus, a dealer normally will offer to sell a foreign currency to the Fund at one rate, while offering a lesser rate of exchange should the Fund desire immediately to resell that currency to the dealer. The Fund will conduct its foreign currency exchange transactions either on a spot (*i.e.*, cash) basis at the spot rate prevailing in the foreign currency exchange market, or through entering into forward, futures or options contracts to purchase or sell foreign currencies. The Fund does not expect to hedge its currency risk.

Risk of Investing in Depositary Receipts. Each Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. The issuers of certain depositary receipts are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in a Fund's Index, may negatively affect a Fund's ability to replicate the performance of its Index. In addition, investments in depositary receipts that are not included in a Fund's Index may increase tracking error.

Risk of Investing in Small- and/or Medium-Capitalization Companies. Each Fund may invest in small- and/or medium-capitalization companies and, therefore will be subject to certain risks associated with small- and medium-capitalization companies. These companies are often subject to less analyst coverage and may be in early and less predictable periods of their corporate existences, with little or no record of profitability. In addition, these companies often have greater price volatility, lower

trading volume and less liquidity than larger more established companies. These companies tend to have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies. Returns on investments in securities of small- and medium-capitalization companies could trail the returns on investments in securities of larger companies.

Risk of Investing in Micro-Capitalization Companies. Market Vectors Junior Gold Miners ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF may invest in micro-capitalization companies. These companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. Micro-capitalization companies may be newly formed or in the early stages of development, with limited product lines, markets or financial resources and may lack management depth. In addition, there may be less public information available about these companies. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities. Also, it may take a long time before the Fund realizes a gain, if any, on an investment in a micro-capitalization company.

Issuer-Specific Changes Risk. (Market Vectors Rare Earth/Strategic Metals ETF, Market Vectors Oil Services ETF and Market Vectors Uranium+Nuclear Energy ETF only.) The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers. A change in the financial condition, market perception or credit rating of an issuer of securities included in a Fund's Index may cause the value of its securities to decline.

Risk of Cash Transactions. Unlike most other ETFs, Market Vectors Coal ETF, Market Vectors Global Alternative Energy ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF effect their creations and redemptions partially for cash, rather than in-kind securities. As a result, an investment in such Fund may be less tax-efficient than an investment in a more conventional ETF. Other ETFs generally are able to make in-kind redemptions and avoid realizing gains in connection with transactions designed to raise cash to meet redemption requests. Because these Funds currently intend to effect all or a portion of redemptions, as applicable, for cash, rather than in-kind distributions, they may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds, which involves transaction costs. If a Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized if it were to distribute portfolio securities in-kind, or to recognize such gain sooner than would otherwise be required. The Funds generally intend to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF.

Equity Securities Risk. The value of the equity securities held by a Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by a Fund participate, or factors relating to specific issuers in which a Fund invests. For example, an adverse event, such as an unfavorable earnings report, may result in a decline in the value of equity securities of an issuer held by a Fund; the price of the equity securities of an issuer may be particularly sensitive to general movements in the securities markets; or a drop in the securities markets may depress the price of most or all of the equities securities held by a Fund. In addition, the equity securities of an issuer in a Fund's portfolio may decline in price if the issuer fails to make anticipated dividend payments. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly

more volatility in those returns.

Market Risk. The prices of the securities in the Funds are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. Overall securities values could decline generally or could underperform other investments. An investment in a Fund may lose money.

Index Tracking Risk. Each Fund's return may not match the return of its Index for a number of reasons. For example, a Fund incurs a number of operating expenses not applicable to its Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of its Index and, to the extent the Fund creates and redeems Creation Units in cash, raising cash to meet redemptions or deploying cash in connection with newly created Creation Units. A Fund's return may also deviate significantly from the return of its Index because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of its Index. A Fund may not be fully invested at times, either as a result of cash flows into the Fund (if the Fund effects creations and redemptions for cash) or reserves of cash held by the Fund to pay expenses or meet redemptions. In addition, a Fund may not be able to invest in certain securities included in its Index, or invest in them in the exact proportions they represent of its Index,

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

due to legal restrictions or limitations imposed by the governments of certain countries or a lack of liquidity on stock exchanges in which such securities trade. Moreover, a Fund may be delayed in purchasing or selling securities included in its Index. Any issues a Fund encounters with regard to currency convertibility (including the cost of borrowing funds, if any) and repatriation may also increase the index tracking risk.

Each Fund is expected to fair value certain of the foreign securities it holds except those securities primarily traded on exchanges that close at the same time the Fund calculates its NAV. See Shareholder Information Determination of NAV. To the extent a Fund calculates its NAV based on fair value prices and the value of its Index is based on securities closing price on local foreign markets (i.e., the value of its Index is not based on fair value prices) or if a Fund otherwise calculates its NAV based on prices that differ from those used in calculating its Index, the Fund's ability to track its Index may be adversely affected. The need to comply with the tax diversification and other requirements of the Internal Revenue Code may also impact a Fund's ability to replicate the performance of its Index. In addition, if a Fund utilizes depositary receipts and other derivative instruments, its return may not correlate as well with its Index as would be the case if the Fund purchased all the securities in its Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Replication Management Risk. Unlike many investment companies, the Funds are not actively managed. Therefore, unless a specific security is removed from its Index, a Fund generally would not sell a security because the security's issuer is in financial trouble. If a specific security is removed from a Fund's Index, the Fund may be forced to sell such security at an inopportune time or for prices other than at current market values. An investment in a Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. Each Fund's Index may not contain the appropriate or a diversified mix of securities for any particular economic cycle. The timing of changes in the securities of a Fund's portfolio in seeking to replicate its Index could have a negative effect on the Fund. Unlike with an actively managed fund, the Adviser does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, a Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. The NAV of the Shares will fluctuate with changes in the market value of the Fund's securities holdings. The market prices of Shares will fluctuate in accordance with changes in NAV and supply and demand on NYSE Arca. The Adviser cannot predict whether Shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the securities of the Index trading individually or in the aggregate at any point in time. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. Any of these factors, discussed above and further below, may lead to the Shares trading at a premium or discount to the Fund's NAV.

Non-Diversified Risk. Each Fund is a separate investment portfolio of Market Vectors ETF Trust (the Trust), which is an open-end investment company registered under the 1940 Act. Each Fund is classified as a non-diversified investment company under the 1940 Act. As a result, each Fund is subject to the risk that it will be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on a Fund's NAV and may make the Fund more volatile than more diversified funds. Market Vectors Oil

Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Uranium+Nuclear Energy ETF may be particularly vulnerable to this risk because their respective Indices they seek to replicate are comprised of securities of a very limited number of companies.

Concentration Risk. A Fund's assets will be concentrated in a particular sector or sectors or industry or group of industries to the extent that its respective Index concentrates in a particular sector or sectors or industry or group of industries. The securities of many or all of the companies in the same sector or industry may decline in value due to developments adversely affecting such sector or industry. By concentrating its assets in a particular sector or sectors or industry or group of industries, a Fund is subject to the risk that economic, political or other conditions that have a negative effect on that sector or industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

ADDITIONAL RISKS

Risk of Investing in Derivatives. Derivatives are financial instruments whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. A Fund's use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments.

Moreover, although the value of a derivative is based on an underlying indicator, a derivative does not carry the same rights as would be the case if a Fund invested directly in the underlying securities.

Derivatives are subject to a number of risks, such as potential changes in value in response to market developments or as a result of the counterparty's credit quality and the risk that a derivative transaction may not have the effect the Adviser anticipated. Derivatives also involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile, and a Fund could lose more than the amount it invests. The use of derivatives may increase the amount and affect the timing and character of taxes payable by shareholders of a Fund.

Many derivative transactions are entered into over-the-counter (not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of a Fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, a Fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the Fund's rights as a creditor (*e.g.*, the Fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for a Fund's derivative positions at any time.

Swaps. The use of swap agreements entails certain risks, which may be different from, and possibly greater than, the risks associated with investing directly in the underlying asset for the swap agreement. For example, swap agreements may be subject to the risk of default by a counterparty as a result of bankruptcy or otherwise, which may cause a Fund to lose payments due by such counterparty altogether, or collect only a portion thereof, which collection could involve additional costs or delays. Swap agreements may be subject to liquidity risk, which exists when a particular swap is difficult to purchase or sell. If a swap transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses to a Fund. In addition, a swap transaction may be subject to a Fund's limitation on investments in illiquid securities. Swap agreements may be subject to pricing risk, which exists when a particular swap agreement becomes extraordinarily expensive (or inexpensive) relative to historical prices or the prices of corresponding cash market instruments. The swaps market is a relatively new market and is largely unregulated. It is possible that developments in the swaps market, including potential government regulation, could adversely affect a Fund's ability to terminate existing swap agreements or to realize amounts to be received under such agreements.

Options. An option is a contract that provides the holder the right to buy or sell shares at a fixed price, within a specified period of time. A call option gives the option holder the right to buy the underlying security from the option writer at the option exercise price at any time prior to the expiration of the option. A put option gives the option holder the right to sell the underlying security to the option writer at the option exercise price at any time prior to the expiration of the option. A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well-conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

Warrants. Warrants are equity securities in the form of options issued by a corporation which give the holder the right to purchase stock, usually at a price that is higher than the market price at the time the warrant is issued. A purchaser takes the risk that the warrant may expire worthless because the market price of the common stock fails to rise above the price set by the warrant.

Futures. Futures contracts generally provide for the future sale by one party and purchase by another party of a specified instrument, index or commodity at a specified future time and at a specified price. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. The prices of futures can be highly volatile, using futures can lower total return, and the potential loss from futures can exceed the Fund's initial investment in such contracts. Utilization of futures transactions by the Funds involves the risk of imperfect or even negative correlation to each Fund's respective Index if the index underlying the futures contracts differs from the

Index. There is also the risk of loss by the Funds of margin deposits in the event of bankruptcy of a broker with whom a Fund has an open position in the futures contract.

Currency Forwards. A currency forward transaction is a contract to buy or sell a specified quantity of currency at a specified date in the future at a specified price which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. Currency forward contracts may be used to increase or reduce exposure to currency price movements. The use of currency forward transactions involves certain risks. For example, if the counterparty under the contract defaults on its obligation to make payments due from it as a result of its bankruptcy or otherwise, the Fund may lose such payments altogether or collect only a portion thereof, which collection could involve costs or delay.

ADDITIONAL INFORMATION ABOUT THE FUNDS INVESTMENT STRATEGIES AND RISKS
(continued)

Participation Notes. Participation notes (P-Notes) are issued by banks or broker-dealers and are designed to offer a return linked to the performance of a particular underlying equity security or market. P-Notes can have the characteristics or take the form of various instruments, including, but not limited to, certificates or warrants. The holder of a P-Note that is linked to a particular underlying security is entitled to receive any dividends paid in connection with the underlying security. However, the holder of a P-Note generally does not receive voting rights as it would if it directly owned the underlying security.

P-Notes constitute direct, general and unsecured contractual obligations of the banks or broker-dealers that issue them, which therefore subject a Fund to counterparty risk, as discussed below.

Investments in P-Notes involve certain risks in addition to those associated with a direct investment in the underlying foreign companies or foreign securities markets whose return they seek to replicate. For instance, there can be no assurance that the trading price of a P-Note will equal the underlying value of the foreign company or foreign securities market that it seeks to replicate. As the purchaser of a P-Note, a Fund is relying on the creditworthiness of the counterparty issuing the P-Note and has no rights under a P-Note against the issuer of the underlying security. Therefore, if such counterparty were to become insolvent, a Fund would lose its investment. The risk that a Fund may lose its investments due to the insolvency of a single counterparty may be amplified to the extent the Fund purchases P-Notes issued by one issuer or a small number of issuers. P-Notes also include transaction costs in addition to those applicable to a direct investment in securities. In addition, a Fund's use of P-Notes may cause the Fund's performance to deviate from the performance of the portion of its Index to which the Fund is gaining exposure through the use of P-Notes.

Due to liquidity and transfer restrictions, the secondary markets on which P-Notes are traded may be less liquid than the markets for other securities, which may lead to the absence of readily available market quotations for securities in a Fund's portfolio. The ability of a Fund to value its securities becomes more difficult and the judgment in the application of fair value procedures may play a greater role in the valuation of a Fund's securities due to reduced availability of reliable objective pricing data. Consequently, while such determinations will be made in good faith, it may nevertheless be more difficult for a Fund to accurately assign a daily value to such securities.

Relationship to Commodities. (Market Vectors Coal ETF, Market Vectors Gold Miners ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Rare Earth/Strategic Metals ETF, Market Vectors Steel ETF, Market Vectors Unconventional Oil & Gas ETF, and Market Vectors Uranium & Nuclear Energy ETF only.) Each Fund's respective Index measures the performance of equity securities of companies in the coal, gold and silver mining, rare earth/strategic metals, steel, oil & gas and uranium industries, as applicable. Each Fund's respective Index does not measure the performance of direct investments in coal, gold, silver, rare earth/strategic metals, steel or uranium (as applicable) and, therefore, may not move in the same direction and to the same extent as direct investments in the underlying commodities.

Leverage Risk. To the extent that a Fund borrows money or utilizes certain derivatives, it may be leveraged. Leveraging generally exaggerates the effect on NAV of any increase or decrease in the market value of a Fund's portfolio securities.

Short History of an Active Market/No Guarantee of Active Trading Market. Certain Funds are recently organized series of an investment company. While Shares are listed on NYSE Arca, there can be no assurance that active trading markets for the Shares will be maintained, especially for recently organized Funds. Van Eck Securities Corporation, the distributor of each Fund's Shares (the Distributor), does not maintain a secondary market in the Shares.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of a Fund will continue to be met or will remain unchanged.

TAX ADVANTAGED PRODUCT STRUCTURE

Unlike many conventional mutual funds which are only bought and sold at closing NAVs, the Shares of each Fund have been designed to be tradable in a secondary market on an intra-day basis and to be created and redeemed in-kind, except for Market Vectors Coal ETF, Market Vectors Global Alternative Energy ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF whose Shares are created and redeemed partially for cash, in Creation Units at each day's market close. These in-kind arrangements are designed to mitigate adverse effects on a Fund's portfolio that could arise from frequent cash purchase and redemption transactions that affect the NAV of the Fund. Moreover, in contrast to conventional mutual funds, where frequent redemptions can have an adverse tax impact on taxable shareholders because of the need to sell portfolio securities which, in turn, may generate taxable gain, the in-kind redemption mechanism of the Funds, to the extent used, generally is not expected to lead to a tax event for shareholders that are not being redeemed.

PORTFOLIO HOLDINGS

A description of each Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's SAI.

MANAGEMENT OF THE FUNDS

Board of Trustees. The Board of Trustees of the Trust has responsibility for the general oversight of the management of the Funds, including general supervision of the Adviser and other service providers, but is not involved in the day-to-day management of the Trust. A list of the Trustees and the Trust officers, and their present positions and principal occupations, is provided in the Funds' SAI.

Investment Adviser. Under the terms of an investment management agreement between the Trust and Van Eck Associates Corporation with respect to Market Vectors Gold Miners ETF (the Gold Miners Investment Management Agreement) and an investment management agreement between the Trust and Van Eck Associates Corporation with respect to each of the other Funds (the Investment Management Agreement and, together with the Gold Miners Investment Management Agreement, the Investment Management Agreements), Van Eck Associates Corporation serves as the adviser to each Fund and, subject to the supervision of the Board of Trustees, is responsible for the day-to-day investment management of the Funds. Under the Gold Miners Investment Management Agreement (but not the Investment Management Agreement), the Adviser is obligated to provide certain fund accounting services to Market Vectors Gold Miners ETF. As of March 31, 2013, the Adviser managed approximately \$35.0 billion in assets. The Adviser has been an investment adviser since 1955 and also acts as adviser or sub-adviser to other mutual funds, exchange-traded funds, other pooled investment vehicles and separate accounts. The Adviser's principal business address is 335 Madison Avenue, 19th Floor, New York, New York 10017.

A discussion regarding the Board of Trustees' approval of the Investment Management Agreements is available in the Trust's semi-annual report for the period ended June 30, 2012.

For the services provided to each Fund under the relevant Investment Management Agreement, each Fund pays the Adviser monthly fees based on a percentage of each Fund's average daily net assets at the annual rate of 0.50% (with respect to the Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Global Alternative Energy ETF, Market Vectors Gold Miners ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Rare Earth/Strategic Metals ETF, Market Vectors RVE Hard Assets Producers ETF, Market Vectors Solar Energy ETF, Market Vectors Steel ETF, Market Vectors Unconventional Oil & Gas ETF and Market Vectors Uranium+Nuclear Energy ETF) and 0.35% (with respect to the Market Vectors Oil Services ETF). From time to time, the Adviser may waive all or a portion of its fee. Until at least May 1, 2014, the Adviser has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of each Fund (excluding interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.35% (with respect to Market Vectors Oil Services ETF), 0.49% (with respect to Market Vectors RVE Hard Assets Producers ETF), 0.53% (with respect to Market Vectors Gold Miners ETF), 0.54% (with respect to Market Vectors Unconventional Oil & Gas ETF), 0.55% (with respect to Market Vectors Steel ETF), 0.56% (with respect to Market Vectors Agribusiness ETF and Market Vectors Junior Gold Miners ETF), 0.57% (with respect to Market Vectors Rare Earth/Strategic Metals ETF), 0.59% (with respect to Market Vectors Coal ETF), 0.60% (with respect to Market Vectors Uranium+Nuclear Energy ETF), 0.62% (with respect to Market Vectors Global Alternative Energy ETF) and 0.65% (with respect to Market Vectors Solar Energy ETF) of its average daily net assets per year. Offering costs excluded from the expense caps are: (a) legal fees pertaining to a Fund's Shares offered for sale; (b) SEC and state registration fees; and (c) initial fees paid for Shares of a Fund to be listed on an exchange.

Each Fund is responsible for all of its expenses, including the investment advisory fees, costs of transfer agency, custody, legal, audit and other services, interest, taxes, any distribution fees or expenses, offering fees or expenses and

extraordinary expenses.

Administrator, Custodian and Transfer Agent. Van Eck Associates Corporation is the administrator for the Funds (the Administrator), and The Bank of New York Mellon is the custodian of the Funds' assets and provides transfer agency and fund accounting services to the Funds. The Administrator is responsible for certain clerical, recordkeeping and/or bookkeeping services which are provided pursuant to the Investment Management Agreement.

Distributor. Van Eck Securities Corporation is the distributor of the Shares. The Distributor will not distribute Shares in less than Creation Units, and does not maintain a secondary market in the Shares. The Shares are traded in the secondary market.

PORTFOLIO MANAGERS

The portfolio managers who currently share joint responsibility for the day-to-day management of each Fund's portfolio are Hao-Hung (Peter) Liao and George Cao. Mr. Liao has been employed by the Adviser since the summer of 2004 as an Analyst. Mr. Liao also serves as a portfolio manager for certain other investment companies advised by the Adviser. Mr. Cao has been employed by the Adviser since December 2007 as a Senior Analyst. Prior to joining the Adviser, he served as a Controller of Operations Administrations Division and Corporate Safety (September 2006-December 2007) for United Airlines. See the Funds

SAI for additional information about the portfolio managers' compensation, other accounts managed by the portfolio managers and their respective ownership of Shares of each Fund.

SHAREHOLDER INFORMATION

DETERMINATION OF NAV

The NAV per Share for each Fund is computed by dividing the value of the net assets of the Fund (*i.e.*, the value of its total assets less total liabilities) by the total number of Shares outstanding. Expenses and fees, including the management fee, are accrued daily and taken into account for purposes of determining NAV. The NAV of each Fund is determined each business day as of the close of trading (ordinarily 4:00 p.m. Eastern time) on the New York Stock Exchange (NYSE). Any assets or liabilities denominated in currencies other than the U.S. dollar are converted into U.S. dollars at the current market rates on the date of valuation as quoted by one or more sources.

The values of each Fund's portfolio securities are based on the securities' closing prices on their local principal markets, where available. Due to the time difference between the United States and certain countries in which certain Funds invest, securities on these exchanges may not trade at times when Shares of the Fund will trade. In the absence of a last reported sales price, or if no sales were reported, and for other assets for which market quotes are not readily available, values may be based on quotes obtained from a quotation reporting system, established market makers or by an outside independent pricing service. Prices obtained by an outside independent pricing service may use information provided by market makers or estimates of market values obtained from yield data related to investments or securities with similar characteristics and may use a computerized grid matrix of securities and its evaluations in determining what it believes is the fair value of the portfolio securities. If a market quotation for a security is not readily available or the Adviser believes it does not otherwise accurately reflect the market value of the security at the time a Fund calculates its NAV, the security will be fair valued by the Adviser in accordance with the Trust's valuation policies and procedures approved by the Board of Trustees. Each Fund may use fair value pricing in a variety of circumstances, including but not limited to, situations where the value of a security in the Fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded (such as a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. In addition, each Fund currently expects that it will fair value certain of the foreign equity securities held by the Fund except those securities principally traded on exchanges that close at the same time the Fund calculates its NAV. Accordingly, a Fund's NAV is expected to reflect certain portfolio securities' fair values rather than their market prices at the time the exchanges on which they principally trade close. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate a Fund's NAV and the prices used by such Fund's Index. This may adversely affect a Fund's ability to track its Index. With respect to securities traded that are in foreign markets, the value of a Fund's portfolio securities may change on days when you will not be able to purchase or sell your Shares.

BUYING AND SELLING EXCHANGE-TRADED SHARES

The Shares of the Funds are listed on NYSE Arca. If you buy or sell Shares in the secondary market, you will incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. In times of severe market disruption or low trading volume in a Fund's Shares, this spread can increase significantly. It is anticipated that the Shares will trade in the secondary market at prices that may differ to varying degrees from the NAV of the Shares. During periods of disruptions to creations and redemptions or the existence of extreme market volatility, the market

prices of Shares are more likely to differ significantly from the Shares NAV.

The Depository Trust Company (DTC) serves as securities depository for the Shares. (The Shares may be held only in book-entry form; stock certificates will not be issued.) DTC, or its nominee, is the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or its participants (described below). Beneficial owners of Shares are not entitled to have Shares registered in their names, will not receive or be entitled to receive physical delivery of certificates in definitive form and are not considered the registered holder thereof. Accordingly, to exercise any rights of a holder of Shares, each beneficial owner must rely on the procedures of: (i) DTC; (ii) DTC Participants, *i.e.*, securities brokers and dealers, banks, trust companies, clearing corporations and certain other organizations, some of whom (and/or their representatives) own DTC; and (iii) Indirect Participants, *i.e.*, brokers, dealers, banks and trust companies that clear through or maintain a custodial relationship with a DTC Participant, either directly or indirectly, through which such beneficial owner holds its

interests. The Trust understands that under existing industry practice, in the event the Trust requests any action of holders of Shares, or a beneficial owner desires to take any action that DTC, as the record owner of all outstanding Shares, is entitled to take, DTC would authorize the DTC Participants to take such action and that the DTC Participants would authorize the Indirect Participants and beneficial owners acting through such DTC Participants to take such action and would otherwise act upon the instructions of beneficial owners owning through them. As described above, the Trust recognizes DTC or its nominee as the owner of all Shares for all purposes. For more information, see the section entitled "Book Entry Only System" in the Funds' SAI.

The NYSE Arca is open for trading Monday through Friday and is closed on weekends and the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. Because non-U.S. exchanges may be open on days when a Fund does not price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell a Fund's Shares.

Market Timing and Related Matters. The Funds impose no restrictions on the frequency of purchases and redemptions. The Board of Trustees considered the nature of each Fund (*i.e.*, a fund whose shares are expected to trade intra-day), that the Adviser monitors the trading activity of authorized participants for patterns of abusive trading, and that the Funds reserve the right to reject orders that may be disruptive to the management of or otherwise not in the Funds' best interests, and that each Fund may fair value certain of its securities. Given this structure, the Board of Trustees determined that it is not necessary to impose restrictions on the frequency of purchases and redemptions for the Funds at the present time.

DISTRIBUTIONS

Net Investment Income and Capital Gains. As a shareholder of a Fund, you are entitled to your share of such Fund's distributions of net investment income and net realized capital gains on its investments. Each Fund pays out substantially all of its net earnings to its shareholders as distributions.

Each Fund typically earns income dividends from stocks and interest from debt securities. These amounts, net of expenses, are typically passed along to Fund shareholders as dividends from net investment income. Each Fund realizes capital gains or losses whenever it sells securities. Net capital gains are distributed to shareholders as capital gain distributions.

Net investment income, if any, and net capital gains, if any, are typically distributed to shareholders at least annually. Dividends may be declared and paid more frequently to improve index tracking or to comply with the distribution requirements of the Internal Revenue Code. In addition, a Fund may determine to distribute at least annually amounts representing the full dividend yield net of expenses on the underlying investment securities, as if the Fund owned the underlying investment securities for the entire dividend period, in which case some portion of each distribution may result in a return of capital, which, for tax purposes, is treated as a return of your investment in Shares. Record shareholders will be notified regarding the portion of the distribution which represents a return of capital.

Distributions in cash may be reinvested automatically in additional Shares of a Fund only if the broker through which you purchased Shares makes such option available.

TAX INFORMATION

As with any investment, you should consider how your Fund investment will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in a Fund, including the possible application of foreign, state and local taxes. Unless your investment in a Fund is through a tax-exempt entity or tax-deferred retirement account, such as a 401(k) plan,

you need to be aware of the possible tax consequences when: (i) the Fund makes distributions, (ii) you sell Shares in the secondary market or (iii) you create or redeem Creation Units.

Taxes on Distributions. As noted above, each Fund expects to distribute net investment income at least annually, and any net realized long-term or short-term capital gains annually. Each Fund may also pay a special distribution at any time to comply with U.S. federal tax requirements.

In general, your distributions are subject to U.S. federal income tax when they are paid, whether you take them in cash or reinvest them in a Fund. Distributions of net investment income, including any net short-term gains, if any, are generally taxable as ordinary income. Whether distributions of capital gains represent long-term or short-term capital gain is determined by how long a Fund owned the investments that generated them, rather than how long you have owned your Shares. Distributions of net short-term capital gains in excess of net long term capital losses, if any, are generally taxable as ordinary income. Distributions of net long-term capital gains in excess of net short-term capital losses, if any, that are reported as capital gain dividends are generally taxable as long-term capital gains. After 2012, long-term capital gains of non-corporate shareholders are taxable at a maximum rate of 15% or 20%, depending on whether the shareholders' income exceeds certain threshold amounts.

The Funds may receive dividends, the distribution of which the Fund may designate as qualified dividends. In the event that a Fund receives such a dividend and designates the distribution of such dividend as a qualified dividend, the dividend may be taxed

SHAREHOLDER INFORMATION (continued)

at the maximum capital gains rates, provided holding period and other requirements are met at both the shareholder and the Fund level.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of your investment to the extent of your basis in the Shares, and generally as capital gain thereafter. A return of capital, which for tax purposes is treated as a return of your investment, reduces your basis in Shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition of Shares. A distribution will reduce a Fund's NAV per Share and may be taxable to you as ordinary income or capital gain even though, from an economic standpoint, the distribution may constitute a return of capital.

Dividends, interest and gains from non-U.S. investments of a Fund may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may, in some cases, reduce or eliminate such taxes.

If more than 50% of a Fund's total assets at the end of its taxable year consist of foreign securities, the Fund may elect to pass through to its investors certain foreign income taxes paid by the Fund, with the result that each investor will (i) include in gross income, as an additional dividend, even though not actually received, the investor's pro rata share of the Fund's foreign income taxes, and (ii) either deduct (in calculating U.S. taxable income) or credit (in calculating U.S. federal income), subject to certain holding period and other limitations, the investor's pro rata share of the Fund's foreign income taxes. It is expected that more than 50% of each Fund's (except for Market Vectors Global Alternative Energy ETF's, Market Vectors Oil Services ETF's and Market Vectors Unconventional Oil & Gas ETF's) assets will consist of foreign securities.

Backup Withholding. Each Fund may be required to withhold a percentage of your distributions and proceeds if you have not provided a taxpayer identification number or social security number or otherwise established a basis for exemption from backup withholding. The backup withholding rate for individuals is currently 28%. This is not an additional tax and may be refunded, or credited against your U.S. federal income tax liability, provided certain required information is furnished to the Internal Revenue Service.

Taxes on the Sale or Cash Redemption of Exchange Listed Shares. Currently, any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as a short term capital gain or loss if held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such Shares. The ability to deduct capital losses may be limited. To the extent that a shareholder's Shares are redeemed for cash, this is normally treated as a sale for tax purposes.

Taxes on In-Kind Creations and In-Kind Redemptions of Creation Units. To the extent a person exchanges securities or securities and cash for Creation Units, such person generally will recognize a gain or loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of exchange and the sum of the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for such Creation Units. A person who exchanges Creation Units for securities or securities and cash will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received and the amount of any cash received for such Creation Units. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for Creation Units cannot be deducted currently under the rules governing wash sales, or on the basis that there has been no significant change in economic position. Persons exchanging primarily securities for Creation Units or redeeming Creation Units should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible and the tax treatment of any creation or redemption transaction.

Under current U.S. federal income tax laws, any capital gain or loss realized upon a redemption (or creation) of Creation Units is generally treated as long-term capital gain or loss if the Shares (or securities surrendered) have been held for more than one year and as a short-term capital gain or loss if the Shares (or securities surrendered) have been held for one year or less.

If you create or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you created or sold and at what price.

Medicare Tax. For taxable years beginning after December 31, 2012, an additional 3.8% Medicare tax will be imposed on certain net investment income (including ordinary dividends and capital gain distributions received from a Fund and net gains from redemptions or other taxable dispositions of a Fund's Shares) of U.S. individuals, estates and trusts to the extent that such person's modified adjusted gross income (in the case of an individual) or adjusted gross income (in the case of an estate or trust) exceeds certain threshold amounts.

Non-U.S. Shareholders. If you are not a citizen or resident alien of the United States or if you are a non-U.S. entity, the Funds' ordinary income dividends (which include distributions of net short-term capital gains) will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or unless such income is effectively connected with a U.S. trade or business.

Effective January 1, 2014, each Fund will be required to withhold U.S. tax (at a 30% rate) on payments of dividends and (effective January 1, 2017) redemption proceeds made to certain non-U.S. entities that fail to comply (or be deemed compliant) with extensive new reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. Shareholders may be requested to provide additional information to a Fund to enable the Fund to determine whether withholding is required.

Non-U.S. shareholders are advised to consult their tax advisors with respect to the particular tax consequences to them of an investment in the Funds, including the possible applicability of the U.S. estate tax.

The foregoing discussion summarizes some of the consequences under current U.S. federal income tax law of an investment in a Fund. It is not a substitute for personal tax advice. Consult your own tax advisor about the potential tax consequences of an investment in a Fund under all applicable tax laws.

INDEX PROVIDERS

The Nuclear Energy Index is published by Deutsche Börse AG. The Gold Miners Index and Steel Index are published by NYSE Euronext. The Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index are published by Market Vectors Index Solutions GmbH (*MVIS*), which is a wholly owned subsidiary of the Adviser. The Hard Assets Producers Index is published by S-Network Global Indexes, LLC (*S-Network*). The Ardour Global Index is published by Ardour Global Indexes LLC (*Ardour*).

Deutsche Börse AG, NYSE Euronext, *MVIS*, *S-Network* and *Ardour* are referred to herein as the Index Providers. The Index Providers do not sponsor, endorse, or promote the Funds and bear no liability with respect to the Funds or any security.

MARKET VECTORS® GLOBAL AGRIBUSINESS INDEX

The Agribusiness Index is a rules based index intended to give investors a means of tracking the overall performance of the companies in the global agribusiness industry that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to): (i) agri-chemicals and fertilizers, seeds and traits, (ii) farm/irrigation equipment and farm machinery and/or (iii) agricultural products (including grain, tobacco, meat, poultry and sugar), aquaculture and fishing, livestock, plantations and trading of agricultural products. Such companies may include medium-capitalization companies and foreign and emerging market issuers. Companies that produce the majority of their revenues from the distribution and/or sale of packaged food products or goods, biodiesel and ethanol or forestry are not included in the Agribusiness Index. The Agribusiness Index covers at least 90% of the free-float market capitalization of the investable universe with at least 25 components.

Constituent stocks of the Agribusiness Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Agribusiness Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Agribusiness Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Agribusiness Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized U.S. or international exchange may qualify (e.g., stocks must be reported securities under Rule 11Aa3-1 under the Securities Exchange Act of 1934, as amended (the Exchange Act)).

All companies that are included in the Agribusiness Index are ranked by their free-float market capitalization. The maximum weight for any single security in the Agribusiness Index is 8%. If a security exceeds the maximum weight, then the weight will be reduced to the maximum weight and the excess weight shall be re-distributed proportionally across all other Agribusiness Index constituents. This process is repeated until no securities have weights exceeding the respective maximum weight.

As of December 31, 2012, the Agribusiness Index included 53 securities of companies with a market capitalization range of between approximately \$382 million and \$50.6 billion and a weighted average market capitalization of \$20.4 billion. These amounts are subject to change.

The Agribusiness Index is calculated and maintained by Structured Solutions AG on behalf of the Index Provider. Agribusiness Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Agribusiness Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Agribusiness Index is reconstituted quarterly, at the close of business on the third Friday in March, June, September and December, and companies are added and/or deleted based upon the Agribusiness Index eligibility criteria. Companies with recent stock exchange listings (*i.e.*, recent initial public offerings) may be added to the Agribusiness Index on a quarterly basis, provided the companies meet all other eligibility criteria and have been trading for more than 30 trading days. The share weights of the Agribusiness Index components are adjusted on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's website prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Agribusiness Index is issued on the Friday prior to a rebalancing date. Target weights of the constituents remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® GLOBAL COAL INDEX

The Coal Index is a rules based index intended to give investors a means of tracking the overall performance of companies in the global coal industry that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to) coal operation (production and mining), coal transportation and storage and production of coal mining equipment as well as coal storage. The Coal Index covers at least 90% of the free-float market capitalization of the investable universe with at least 25 components.

Constituent stocks of the Coal Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Coal Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible to remain in the Coal Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Coal Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, stocks must be reported securities under Rule 11Aa3-1 under the Exchange Act).

All companies that are included in the Coal Index are ranked by their free-float market capitalization. The maximum weight for any single security in the Index is 8%. If a security exceeds the maximum weight, then the weight will be reduced to the maximum weight and the excess weight shall be re-distributed proportionally across all other Coal Index constituents. This process is repeated until no securities have weights exceeding the respective maximum weight.

As of December 31, 2012, the Coal Index included 33 securities of companies with a market capitalization range of between approximately \$269 million and \$87.1 billion and a weighted average market capitalization of \$11.7 billion. These amounts are subject to change.

The Coal Index is calculated and maintained by Structured Solutions AG on behalf of the Index Provider. Coal Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Coal Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Coal Index is reconstituted quarterly, at the close of business on the third Friday in March, June, September and December, and companies are added and/or deleted based upon the Coal Index eligibility criteria. Companies with recent stock exchange listings (*i.e.*, recent initial public offerings) may be added to the Coal Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Coal Index components are adjusted on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's website prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Coal Index is issued on the Friday prior to a rebalancing date. Target weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

ARDOUR GLOBAL INDEXSM (EXTRA LIQUID)

The Ardour Global Index is a rules based index intended to give investors a means of tracking the overall performance of a global universe of listed companies engaged in the alternative energy industry. The Ardour Global IndexSM (Composite) (the AGI Composite Index) is a modified capitalization weighted, float adjusted index comprised of publicly traded companies engaged in the production of alternative fuels and/or technologies related to the production of alternative energy power (the AGI Industry). The AGI Composite Index strives to be inclusive of all companies worldwide that are principally engaged in alternative energy. The Ardour Global Index was determined to yield a benchmark value of approximately 2000 at its inception date, which was the close of trading on December 31, 1999. The Ardour Global Index represents the 30 stocks in the AGI Composite Index with the highest average daily trading volume value and market capitalization. Stocks must have a market capitalization of greater than \$100 million on a rebalancing date to be included in the Ardour Global Index. Stocks whose market capitalizations fall below \$50 million as of any rebalancing date will be deleted from the Ardour Global Index. Stocks must have a three-month average daily trading volume greater than \$1 million to be included in the AGI Composite Index.

As of December 31, 2012, the Ardour Global Index included 30 securities of companies with a market capitalization range of between approximately \$347 million and \$18.3 billion and a weighted average market capitalization of \$4.8 billion. These amounts are subject to change.

The Ardour Global Index and AGI Composite Index are each calculated and maintained by Thomson Reuters PLC on behalf of Ardour. Index values are calculated daily, except Saturdays and Sundays, and are distributed over the Consolidated Tape Association's Network B between the hours of approximately 9:30 a.m. and 4:15 p.m. (New York time), under the symbol AGIXL. Index values are disseminated every 15 seconds. The Ardour Global Index includes stocks of companies engaged in the entire chain of alternative energy production, including alternative energy fuels and resources (solar, wind, bio-fuels, water and geothermal), environmental technologies, energy efficiency and enabling technologies. Only companies which are principally engaged in the business of alternative energy, *i.e.*, derive over 50% of their total revenues from the industry are eligible. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings.) Companies with R-Score (average three-month daily trading volume value (in thousands) divided by average three-month market capitalization (in millions)) of less than 25% of its total market capitalization, based on its average daily share volume for the three calendar months prior to inclusion, shall not be eligible for inclusion in the AGI Composite Index and therefore ineligible for inclusion in the Ardour Global Index.

The Ardour Global Index is calculated using a capitalization weighting methodology, adjusted for float. Ardour Global Index weightings may be modified so as to ensure compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Ardour Global Index (and the AGI Composite Index) is rebalanced quarterly, at the close of business on the third Friday of each calendar quarter. The share weights of Ardour Global Index components are adjusted on each rebalancing date, and new companies (IPOs) may be added to the Ardour Global Index on any rebalancing date, provided the companies meet all eligibility criteria and have been trading for more than 22 trading days. The Ardour Global Index is reconstituted quarterly on the dates of quarterly rebalancings and companies are added and/or deleted based upon the Ardour Global Index eligibility criteria.

The Ardour Global Index (and the AGI Composite Index) is reviewed quarterly to assure that all components continue to meet the eligibility requirements. New components (IPOs) that meet eligibility requirements may be added to the Ardour Global Index at the quarterly rebalancings. Components that fail to meet eligibility requirements are deleted quarterly. Rebalancing data, including constituent weights and related information, is posted on the Ardour Global Index web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Ardour Global Index is issued no later than the Wednesday prior to the second Friday in a rebalancing month. Share weights of the constituents remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock

splits. Share weights of the Ardour Global Index are not adjusted between rebalancing dates for shares issued or shares repurchased. However, in the event that a component company is deleted from the Index in the period between rebalancings due to a corporate action, a new company will be substituted in the Ardour Global Index in approximately the same weight as the removed company. The Ardour Global Index is calculated by Thomson Reuters PLC.

NYSE ARCA GOLD MINERS INDEX

The Gold Miners Index is a modified market capitalization weighted index primarily comprised of publicly traded companies involved in the mining for gold. The Gold Miners Index includes common stocks and ADRs of selected companies that are involved in mining for gold and that are listed for trading on the NYSE, NYSE Arca or quoted on the NASDAQ. Only companies with market capitalizations greater than \$100 million that have a daily average trading volume of at least 50,000 shares over the past six months are eligible for inclusion in the Gold Miners Index.

As of December 31, 2012, the Gold Miners Index included 29 securities of companies with a market capitalization range of between approximately \$209 million and \$35.0 billion and a weighted average market capitalization of \$14.5 billion. These amounts are subject to change.

The Gold Miners Index is calculated using a modified market capitalization weighting methodology. The Gold Miners Index is weighted based on the market capitalization of each of the component securities, modified to conform to the following asset diversification requirements, which are applied in conjunction with the scheduled quarterly adjustments to the Gold Miners Index:

- (1) the weight of any single component security may not account for more than 20% of the total value of the Gold Miners Index;
- (2) the component securities are split into two subgroups-large and small, which are ranked by market capitalization weight in the Gold Miners Index. Large stocks are defined as having a Gold Miners Index weight greater than or equal to 5%. Small securities are defined as having an index weight below

5%; and

- (3) the aggregate weight of those component securities which individually represent more than 4.5% of the total value of the Gold Miners Index may not account for more than 50% of the total Gold Miners Index value.

The Gold Miners Index is reviewed quarterly so that the Gold Miners Index components continue to represent the universe of companies involved in the gold mining industry. The NYSE Euronext may at any time and from time to time change the number of securities comprising the group by adding or deleting one or more securities, or replacing one or more securities contained in the group with one or more substitute securities of its choice, if in the NYSE Euronext's discretion such addition, deletion or substitution is necessary or appropriate to maintain the quality and/or character of the Gold Miners Index. Changes to the Gold Miners Index compositions and/or the component share weights in the Gold Miners Index typically take effect after the close of trading on the third Friday of each calendar quarter month in connection with the quarterly index rebalance.

MARKET VECTORS® GLOBAL JUNIOR GOLD MINERS INDEX

The Junior Gold Miners Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of small- and medium-capitalization companies that are involved primarily in the mining for gold and/or silver. To be eligible for the Junior Gold Miners Index, companies must generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their revenues related to) gold and/or silver mining or have mining projects with the potential to generate at least 50% of their revenues from gold and/or silver when developed. The target coverage for the Junior Gold Miners Index is 100% of the free-float market capitalization of the investable small-cap universe with at least 25 companies.

Constituent stocks of the Junior Gold Miners Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Junior Gold Miners Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Junior Gold Miners Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Junior Gold Miners Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (e.g., National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the Junior Gold Miners Index included 76 securities of companies with a market capitalization range of between approximately \$107 million and \$1.4 billion and a weighted average market capitalization of \$743 million. These amounts are subject to change.

The Junior Gold Miners Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Junior Gold Miners Index. Structured Solutions AG uses its best efforts to ensure that the Junior Gold Miners Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Junior Gold Miners Index to third parties. Market Vectors Junior Gold Miners ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in the Market Vectors Junior Gold Miners ETF. Junior Gold Miners Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Junior Gold Miners Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Junior Gold Miners Index is reconstituted quarterly, at the close of business on the third Friday in a quarter-end month (i.e., March, June, September and December) and companies are added and/or deleted based upon the Junior Gold Miners Index eligibility criteria. Companies with recent stock exchange listings, i.e., recent initial public offerings, may be added to the Junior Gold Miners Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Junior Gold Miners Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on MVIS web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Junior Gold Miners Index is issued on the Friday prior to a rebalancing date. Target weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® US LISTED OIL SERVICES 25 INDEX

The Oil Services Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of the largest and the most liquid common stocks and depositary receipts of U.S. exchange-listed companies that derive at least their revenues from (or, in certain circumstances, have at least 50% of their assets related to) oil services to the upstream oil sector, which includes companies engaged primarily in oil equipment, oil services or oil drilling. Of the largest 50 stocks in the oil services sector by full market capitalization, the top 25 by free-float market capitalization (*e.g.*, includes only shares that are readily available for trading in the market) and three month average daily trading volume are included in the Oil Services Index.

Constituent stocks of the Oil Services Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Oil Services Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Oil Services Index. Stocks must have a three month average daily trading volume value of at least \$1 million to be eligible for the Oil Services Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized U.S. exchange may qualify (*e.g.*, stocks must be reported securities under Rule 11Aa3-1 under the Exchange Act).

As of December 31, 2012, the Oil Services Index included 25 securities of companies with a market capitalization range of between approximately \$1.8 billion and \$92.0 billion and a weighted average market capitalization of \$30.6 billion. These amounts are subject to change.

The Oil Services Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Oil Services Index. Structured Solutions AG uses its best efforts to ensure that the Oil Services Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Oil Services Index to third parties. Market Vectors Oil Services ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in the Market Vectors Oil Services ETF. Oil Services Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Oil Services Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Oil Services Index is rebalanced semi-annually, at the close of business on the third Friday in March and September, and companies are added and/or deleted based upon the Oil Services Index eligibility criteria. Companies with recent stock exchange listings (*i.e.*, recent initial public offerings) may be added to the Oil Services Index on a semi-annual basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Oil Services Index components are adjusted on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the MVIS website prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Oil Services Index is issued on the Friday prior to a rebalancing date. Target weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

MARKET VECTORS® GLOBAL RARE EARTH/STRATEGIC METALS INDEX

The Rare Earth/Strategic Metals Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of companies involved in the rare earth and strategic metals segment. To be eligible for the Rare Earth/Strategic Metals Index, companies must (i) generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to) rare earth/strategic metals or (ii) with mining projects that have the potential to generate at least 50% of their revenues from rare earth/strategic metals.

Constituent stocks of the Rare Earth/Strategic Metals Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Rare Earth/Strategic Metals Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible for the Rare Earth/Strategic Metals Index. Stocks must have a three-month average daily trading volume value of at least \$1.0 million to be eligible for the Rare Earth/Strategic Metals Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (e.g., National Stock Market stocks must be NMS securities under Rule 600(b) of Regulation NMS. Similar criteria and standards apply to stocks with foreign listings).

As of December 31, 2012, the Rare Earth/Strategic Metals Index included 23 securities of companies with a market capitalization range of between approximately \$145 million and \$6.7 billion and a weighted average market capitalization of \$1.7 billion. These amounts are subject to change.

The Rare Earth/Strategic Metals Index is the exclusive property of MVIS (a wholly owned subsidiary of the Adviser), which has contracted with Structured Solutions AG to maintain and calculate the Rare Earth/Strategic Metals Index. Structured Solutions AG uses its best efforts to ensure that the Rare Earth/Strategic Metals Index is calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Rare Earth/Strategic Metals Index to third parties. Market Vectors Rare Earth/Strategic Metals ETF is not sponsored, endorsed, sold or promoted by MVIS and MVIS makes no representation regarding the advisability of investing in the Market Vectors Rare Earth/Strategic Metals ETF. Rare Earth/Strategic Metals Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Rare Earth/Strategic Metals Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Rare Earth/Strategic Metals Index is reconstituted quarterly, at the close of business on the third Friday in a quarter-end month (i.e., March, June, September and December) and companies are added and/or deleted based upon the Rare Earth/Strategic Metals Index eligibility criteria. Companies with recent stock exchange listings, i.e., recent initial public offerings, may be added to the Rare Earth/Strategic Metals Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Rare Earth/Strategic Metals Index components are adjusted also on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the MVIS web site prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Rare Earth/Strategic Metals Index is issued on the Friday prior to a rebalancing date. Target weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

THE ROGERS™ VAN ECK HARD ASSETS PRODUCERS INDEX

The Hard Assets Producers Index is a rules based index intended to give investors a means of tracking the overall performance of a global universe of listed companies engaged in the production and distribution of commodities and commodity-related products and services. The Hard Assets Producers Index is a modified capitalization weighted, float adjusted index comprising publicly traded companies engaged in the production and distribution of commodities and commodity-related products and services in the following sectors: 1) Agriculture; 2) Alternatives (Water & Alternative Energy); 3) Base and Industrial Metals; 4) Energy; 5) Forest Products; and 6) Precious Metals. Index constituents include certain companies that produce products and services directly related to the production of commodities, but not the commodities themselves.

As of December 31, 2012, the Hard Assets Producers Index included 336 securities of companies with a market capitalization range of between approximately \$464 million and \$389.6 billion and a weighted average market capitalization of \$66.7 billion. These amounts are subject to change.

The six sectors are weighted based on estimates of the global consumption of various commodities included in each of the sectors. Sector weights are set annually on the third Friday of the last month of the third calendar quarter and the Hard Assets Producers Index is rebalanced quarterly to the sector weights. The Hard Assets Producers Index includes companies worldwide that are principally engaged (derive greater than 50% of revenues from applicable sources) in the production and/or distribution of commodities and commodity-related products and services.

The Hard Assets Producers Index strives to capture at least 95% of the global investable market capitalization of its various sectors with the exception of the agriculture sector, where the Hard Assets Producers Index strives to capture 100% of its global investable market capitalization. Constituent stocks must have a market capitalization of greater than \$500 million on a rebalancing date to be added to the Hard Assets Producers Index. Stocks whose market capitalizations fall below \$250 million as of any rebalancing date will be deleted from the Hard Assets Producers Index. Stocks must have a three-month trading volume equal to or greater than \$1 million per day to be included in the Hard Assets Producers Index. Only shares that trade on a recognized domestic or international stock exchange that provides a last closing price may qualify (*e.g.*, National Stock Market stocks must be reported securities under Rule 11Aa3-1 of the Exchange Act. Similar criteria and standards apply to stocks with foreign listings).

The Hard Assets Producers Index is calculated and maintained by S&P on behalf of S-Network Global Indexes LLC. Index values are calculated daily, except Saturdays and Sundays, and are distributed over the Consolidated Tape Association's Network B between the hours of approximately 9:30 a.m. and 4:15 p.m. (New York time), under the symbol RVEI. Index values are disseminated every 15 seconds.

The Hard Assets Producers Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to ensure compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Hard Assets Producers Index is reconstituted quarterly, at the close of business on the third Friday of the last month of each calendar quarter, and companies are added and/or deleted based upon the Hard Assets Producers Index eligibility criteria. Companies with recent stock exchange listings, *i.e.*, recent initial public offerings, may be added to the Hard Assets Producers Index on any rebalancing date, provided the companies meet all eligibility criteria and have been trading for more than 22 trading days. The share weights of the Hard Assets Producers Index components are adjusted on each rebalancing date.

Rebalancing data, including constituent weights and related information, is posted on the Hard Assets Producers Index's web site prior to the start of trading on the first business day following the third Friday of the last month of each calendar quarter. A press announcement identifying additions and deletions to the Hard Assets Producers Index is issued no later than the Wednesday prior to the second Friday of the rebalancing month. Share weights of the constituents remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits. Share weights of the Hard Assets Producers Index are not adjusted between rebalancing

dates for shares issued or shares repurchased.

MARKET VECTORS® GLOBAL SOLAR ENERGY ETF

The Solar Energy Index is a rules based index intended to give investors a means of tracking the overall performance of companies involved in solar energy. The Solar Energy Index is comprised of securities of companies that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their revenues related to) photovoltaic and solar power, or the provision of solar power equipment/technologies and materials or services to solar power equipment/technologies producers.

Constituent stocks of the Solar Energy Index must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Solar Energy Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible to remain in the Solar Energy Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Solar Energy Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, stocks must be reported securities under Rule 11Aa3-1 under the Exchange Act).

All companies that are included in the Solar Energy Index are ranked by their free-float market capitalization. The maximum weight for any single security in the Index is 8%. If a security exceeds the maximum weight, then the weight will be reduced to the maximum weight and the excess weight shall be re-distributed proportionally across all other Solar Energy Index constituents. This process is repeated until no securities have weights exceeding the respective maximum weight.

As of December 31, 2012, the Solar Energy Index included 34 securities of companies with a market capitalization range of between approximately \$98 million and \$3.3 billion and a weighted average market capitalization of \$1.2 billion. These amounts are subject to change.

The Solar Energy Index is calculated and maintained by Structured Solutions AG on behalf of the Index Provider. Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Solar Energy Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to facilitate compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Solar Energy Index is reconstituted quarterly, at the close of business on the third Friday in March, June, September and December, and companies are added and/or deleted based upon the Solar Energy Index eligibility criteria. Companies with recent stock exchange listings (*i.e.*, recent initial public offerings) may be added to the Solar Energy Index on a quarterly basis, provided the companies meet all other eligibility criteria and have been trading for more than 30 trading days. The share weights of the Solar Energy Index components are adjusted on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's website prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Solar Energy Index is issued on the Friday prior to a rebalancing date. Target weights of the constituents normally remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

The Steel Index is a modified market capitalization weighted index comprised of common stocks and ADRs of selected companies that are primarily involved in a variety of activities that are related to steel production, including the operation of mills manufacturing steel, the fabrication of steel shapes or products, or the extraction and reduction of iron ore, and that are listed for trading on the NYSE, NYSE Arca or quoted on the NASDAQ. Only companies with market capitalizations greater than \$100 million that have a daily average trading volume of at least \$1 million over the past three months are eligible for inclusion in the Steel Index.

As of December 31, 2012, the Steel Index included 26 securities of companies with a market capitalization range of between approximately \$242 million and \$82.0 billion and a weighted average market capitalization of \$25.7 billion. These amounts are subject to change.

The Steel Index is weighted based on the market capitalization of each of the component securities, modified to conform to the following asset diversification requirements, which are applied in conjunction with the scheduled quarterly adjustments to the Steel Index:

- (1) the weight of any single component security may not account for more than 20% of the total value of the Steel Index; and
- (2) the aggregate weight of those component securities which individually represent more than 5% of the total value of the Steel Index may not account for more than 50% of the total Steel Index value.

The Steel Index is reviewed quarterly so that the Steel Index components continue to represent the universe of companies involved in the iron ore mining or steel production. NYSE Euronext may at any time and from time to time change the number of stocks comprising the group by adding or deleting one or more stocks, or replace one or more stocks contained in the group with one or more substitute stocks of its choice, if in the Exchange's discretion such addition, deletion or substitution is necessary or appropriate to maintain the quality and/or character of the index to which the group relates. Changes to the Steel Index compositions and/or the component share weights in the Steel Index typically take effect after the close of trading one business day prior to the last business day of each calendar quarter month in connection with the quarterly index rebalance.

MARKET VECTORS® GLOBAL UNCONVENTIONAL OIL & GAS INDEX

The Oil & Gas Index is a rules based, modified capitalization weighted, float adjusted index intended to give investors a means of tracking the overall performance of companies involved in the exploration, development, extraction and/or production of unconventional oil and natural gas. The Oil & Gas Index contains companies that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to) unconventional oil and gas or that own properties with the potential, in the Index Provider's view, to generate at least 50% of their revenues from this segment. Unconventional oil and gas includes: coal bed methane, coal seam gas, shale oil, shale gas, tight natural gas, tight oil and tight sands. Companies that generate at least 50% of their revenues from oil sands or from services to the unconventional oil and gas segment are not included in the Oil & Gas Index.

Constituent stocks must have a market capitalization of greater than \$150 million as of the end of the month prior to the month in which a rebalancing date occurs to be eligible for the Oil & Gas Index. Stocks whose market capitalizations fall below \$75 million as of the end of the month prior to the month in which any rebalancing date occurs will no longer be eligible to remain in the Oil & Gas Index. Stocks must have a three-month average daily trading volume value of at least \$1 million to be eligible for the Oil & Gas Index and issuers of such stocks must have traded at least an average of 250,000 shares per month over the last six months. Only shares that trade on a recognized domestic or international stock exchange may qualify (*e.g.*, stocks must be reported securities under Rule 11Aa3-1 under the Exchange Act).

As of December 31, 2012, the Oil & Gas Index included 47 securities of companies with a market capitalization range of between approximately \$791 million and \$62.1 billion and a weighted average market capitalization of \$18.4 billion. These amounts are subject to change.

The Oil & Gas Index is calculated and maintained by Structured Solutions AG on behalf of the Index Provider. Oil & Gas Index values are calculated daily and are disseminated every 15 seconds between the hours of approximately 7:00 p.m. and 4:40 p.m. (Eastern time).

The Oil & Gas Index is calculated using a capitalization weighting methodology, adjusted for float, which is modified so as to ensure compliance with the diversification requirements of Subchapter M of the Internal Revenue Code. The Oil & Gas Index is reconstituted quarterly, at the close of business on the third Friday in March, June, September and December, and companies are added and/or deleted based upon the Oil & Gas Index eligibility criteria. Companies with recent stock exchange listings (*i.e.*, recent initial public offerings) may be added to the Oil & Gas Index on a quarterly basis, provided the companies meet all eligibility criteria and have been trading for more than 30 trading days. The share weights of the Oil & Gas Index components are adjusted on a quarterly basis (every third Friday in a quarter-end month).

Rebalancing data, including constituent weights and related information, is posted on the Index Provider's website prior to the start of trading on the first business day following the third Friday of the calendar quarter. A press announcement identifying additions and deletions to the Oil & Gas Index is issued on the Friday prior to a rebalancing date. Target weights of the constituents remain constant between quarters except in the event of certain types of corporate actions, including stock splits and reverse stock splits.

DAXGLOBAL® NUCLEAR ENERGY INDEX

The Nuclear Energy Index is intended to give investors an efficient, modified market capitalization weighted investment designed to track the movements of securities of companies engaged in the nuclear business that are traded on leading global exchanges. The Nuclear Energy Index covers seven major sub-sectors: uranium miners, uranium enrichment, uranium storage, equipment for use in the provision of nuclear energy, nuclear plant infrastructure, nuclear fuel transportation and nuclear energy generation. The Nuclear Energy Index is comprised of common stocks and depositary receipts that are listed for trading on major stock exchanges around the world. The Nuclear Energy Index divisor was initially determined to yield a benchmark value of 100.00 at the close of trading on December 28, 2001. The Nuclear Energy Index is calculated and maintained by Deutsche Börse AG. The value of the Nuclear Energy Index is disseminated every 15 seconds between the hours of approximately 9:00 a.m. and 10:15 p.m. (New York time). Only companies with market capitalizations greater than \$180 million that have a worldwide average daily trading value of at least \$1.2 million (over the past six months as well as over each of the past two months) and have maintained a monthly aggregated trading volume of 300,000 shares over each of the past six months are eligible for inclusion in the Nuclear Energy Index. For companies already included in the Nuclear Energy Index, the market capitalization need only be greater than \$90 million, while the average trading volume must be at least \$600,000. The average daily value traded criteria for each of the last two months is not applied for companies already included in the Nuclear Energy Index.

As of December 31, 2012, the Nuclear Energy Index included 19 securities of companies with a market capitalization range of between approximately \$66 million and \$34.1 billion and a weighted average market capitalization of \$8.4 billion. These amounts are subject to change.

The Nuclear Energy Index is calculated using a modified market capitalization weighting methodology. The Nuclear Energy Index is weighted based on the market capitalization of each of its component securities, modified to conform to the following asset diversification requirements, which are applied in conjunction with the scheduled quarterly adjustments to the Nuclear Energy Index:

- (1) the weight of any single component security may not account for more than 8% of the total value of the Nuclear Energy Index;
- (2) the aggregate weight of those component securities which individually represent

more than
5% of the
total value
of the
Nuclear
Energy
Index may
not account
for more
than 40% of
the total
Nuclear
Energy
Index value;
and

- (3) no other
component
securities
will
individually
represent
more than
4.5% of the
total value
of the
Nuclear
Energy
Index.

The universe of potential securities eligible for inclusion in the Nuclear Energy Index will be reviewed semiannually (generally, the third Friday of March and September) so that the Nuclear Energy Index components continue to represent the universe of all relevant sub-sectors. Deutsche Börse AG may at any time and from time to time change the number of securities comprising the group by adding or deleting one or more securities, or replace one or more securities contained in the group with one or more substitute securities of its choice, if in Deutsche Börse AG's discretion such addition, deletion or substitution is necessary or appropriate to maintain the quality and/or character of the Nuclear Energy Index. Changes to the component share weights of the Nuclear Energy Index will typically take effect on the third Friday of each calendar quarter month in connection with the quarterly index rebalance.

Although the Index Compilation Agent shall obtain information for inclusion in or for use in the calculation of each of the Gold Miners Index and Steel Index from sources which it considers reliable, the Index Compilation Agent does not guarantee the accuracy and/or the completeness of the component data of each of the Gold Miners Index and Steel Index obtained from independent sources. The Index Compilation Agent makes no warranty, express or implied, as to results to be obtained by the Trust as sub-licensee, licensee s customers and counterparties, owners of Shares of Market Vectors Gold Miners ETF and Market

Vectors Steel ETF, or any other person or entity from the use of each of the Gold Miners Index and Steel Index or any data included therein in connection with the rights licensed as described herein or for any other use. The Index Compilation Agent makes no express or implied warranties, and hereby expressly disclaims all warranties of merchantability or fitness for a particular purpose with respect to each of the Gold Miners Index and Steel Index or any data included therein. Without limiting any of the foregoing, in no event shall the Index Compilation Agent have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of an Index's possibility of such damages.

The Adviser has entered into a licensing agreement with MVIS to use the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index. The Adviser has also granted MVIS a license to use the phrase "Market Vectors" in connection with the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index. Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF are entitled to use the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index, respectively, pursuant to a sub-licensing arrangement with the Adviser.

Shares of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF are not sponsored, endorsed, sold or promoted by the MVIS. MVIS makes no representation or warranty, express or implied, to the owners of the Shares of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF or any member of the public regarding the advisability of investing in securities generally or in the Shares of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF particularly or the ability of the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index to track the performance of the securities markets. The Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index are determined and composed by MVIS without regard to the Adviser or the Shares of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF. MVIS has no obligation to take the needs of the Adviser or the owners of the Shares of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF into consideration in determining or composing the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index. MVIS is not responsible for and has not participated in the determination of the timing of, prices at, or quantities of the Shares of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF to be issued or in the determination or calculation of the equation by which the Shares of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF are to be converted into cash. MVIS has no obligation or liability in connection with the administration, marketing or trading of the Shares of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF.

MVIS DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE AGRIBUSINESS INDEX, COAL INDEX, JUNIOR GOLD MINERS INDEX, OIL & GAS INDEX, OIL SERVICES INDEX, RARE EARTH/STRATEGIC METALS INDEX AND SOLAR ENERGY INDEX OR ANY DATA INCLUDED THEREIN AND MVIS SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS THEREIN. MVIS MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ADVISER, OWNERS OF THE SHARES OF MARKET VECTORS AGRIBUSINESS ETF, MARKET VECTORS COAL ETF, MARKET VECTORS JUNIOR GOLD MINERS ETF, MARKET VECTORS UNCONVENTIONAL OIL & GAS ETF, MARKET VECTORS OIL SERVICES ETF, MARKET VECTORS RARE EARTH/STRATEGIC METALS ETF AND MARKET VECTORS SOLAR ENERGY ETF, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE AGRIBUSINESS INDEX, COAL INDEX, JUNIOR GOLD MINERS INDEX, OIL & GAS INDEX, OIL SERVICES INDEX, RARE EARTH/STRATEGIC METALS INDEX AND SOLAR ENERGY INDEX OR ANY DATA INCLUDED THEREIN. MVIS MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE AGRIBUSINESS INDEX, COAL INDEX, JUNIOR GOLD MINERS INDEX, OIL & GAS INDEX, OIL SERVICES INDEX, RARE EARTH/STRATEGIC METALS INDEX AND SOLAR ENERGY INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL

LICENSE AGREEMENTS AND DISCLAIMERS (continued)

MVIS HAVE ANY LIABILITY FOR ANY SPECIAL, PUNITIVE, INDIRECT OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS), EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF are not sponsored, promoted, sold or supported in any other manner by Structured Solutions AG nor does Structured Solutions AG offer any express or implicit guarantee or assurance either with regard to the results of using the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index and/or their trademarks or their prices at any time or in any other respect. The Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index are calculated and maintained by Structured Solutions AG. Structured Solutions AG uses its best efforts to ensure that the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index are calculated correctly. Irrespective of its obligations towards MVIS, Structured Solutions AG has no obligation to point out errors in the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index to third parties including but not limited to investors and/or financial intermediaries of Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF. Neither the publication of the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index by Structured Solutions AG nor the licensing of the Agribusiness Index, Coal Index, Junior Gold Miners Index, Oil & Gas Index, Oil Services Index, Rare Earth/Strategic Metals Index and Solar Energy Index or their trademarks for the purpose of use in connection with Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF constitutes a recommendation by Structured Solutions AG to invest capital in Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF nor does it in any way represent an assurance or opinion of Structured Solutions AG with regard to any investment in Market Vectors Agribusiness ETF, Market Vectors Coal ETF, Market Vectors Junior Gold Miners ETF, Market Vectors Unconventional Oil & Gas ETF, Market Vectors Oil Services ETF, Market Vectors Rare Earth/Strategic Metals ETF and Market Vectors Solar Energy ETF. Structured Solutions AG is not responsible for fulfilling the legal requirements concerning the accuracy and completeness of the Prospectus.

THE INDICATIVE VALUE CALCULATION AGENT SHALL NOT BE LIABLE TO THE ADVISER, ANY INVESTOR IN MARKET VECTORS URANIUM+NUCLEAR ENERGY ETF OR OTHER THIRD PARTIES FOR ANY DAMAGES, INCLUDING, WITHOUT LIMITATION, LOSS OF BUSINESS REVENUES, LOST PROFITS OR ANY INDIRECT, CONSEQUENTIAL, SPECIAL OR SIMILAR DAMAGES WHATSOEVER, WHETHER IN CONTRACT, TORT OR OTHERWISE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

FINANCIAL HIGHLIGHTS

The financial highlights tables which follow are intended to help you understand the Funds' financial performance since each Fund's inception. Certain information reflects financial results for a single Fund share. The total returns in the table represent that rate that an investor would have earned (or lost) on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information has been audited by Ernst & Young LLP, the Trust's independent registered public accounting firm, whose report, along with the Funds' financial statements, are included in the Funds' Annual Report, which is available upon request.

For a share outstanding throughout each period:

PREMIUM/DISCOUNT INFORMATION

Information regarding how often the Shares of each Fund traded on NYSE Arca at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund during the past four calendar quarters, as applicable, can be found at www.marketvectorsetfs.com.

GENERAL INFORMATION

CONTINUOUS OFFERING

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Trust on an ongoing basis, a distribution, as such term is used in the Securities Act, may occur at any point. Broker dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker dealers who are not underwriters but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an unsold allotment within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on NYSE Arca is satisfied by the fact that the prospectus is available at NYSE Arca upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

OTHER INFORMATION

The Trust was organized as a Delaware statutory trust on March 15, 2001. Its Declaration of Trust currently permits the Trust to issue an unlimited number of Shares of beneficial interest. If shareholders are required to vote on any matters, each Share outstanding would be entitled to one vote. Annual meetings of shareholders will not be held except as required by the 1940 Act and other applicable law. See the Funds' SAI for more information concerning the Trust's form of organization. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of a Fund. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into an agreement with the Funds.

Dechert LLP serves as counsel to the Trust, including the Funds. Ernst & Young LLP serves as the Trust's independent registered public accounting firm and will audit the Fund's financial statements annually.

MAY 1, 2013
as revised on
June 10, 2013

Principal U.S. Listing Exchange: NYSE Arca, Inc.

The Fund's investment objective is to replicate as closely as possible, before fees and expenses, the price and yield performance of the CSI 300 Index.* The Fund may gain exposure to the China A-share market by investing in swaps that are linked to the performance of China A-shares and directly investing in China A-shares. *An investment in the Fund involves a significant degree of risk, including, but not limited to, the following:*

The Adviser's ability to manage the Fund depends upon the availability of China A-shares and the willingness of swap counterparties to engage in swaps with the Fund linked to the performance of China A-shares. A counterparty's inability or unwillingness to continue to enter into swaps with the Fund could have a material adverse effect on the Fund.

The Fund may suffer significant losses if a swap

counterparty fails to perform its obligations under the swap as a result of bankruptcy or otherwise.

Given that, at present, there are only a limited number of potential counterparties willing and able to enter into swap transactions linked to the performance of China A-shares, the Fund may enter into swap transactions with as few as one counterparty at any time.

Swaps in which the Fund invests may need to be reset on a regular basis which may increase the likelihood that the Fund will generate short-term capital gains and/or ordinary income.

See Summary Information Principal Risks of Investing in the Fund Special Risk Considerations of Investing in China and A-Shares, Risk of Investing in Swaps, Additional Information About the Fund's Investment Strategies and

Risks Risks of Investing in the Fund and Shareholder Information Tax Information for a further discussion of these and other risks of investing in the Fund.

MARKET VECTORS CHINA ETF**SUMMARY INFORMATION****INVESTMENT OBJECTIVE**

Market Vectors China ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the CSI 300 Index (the Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	1.71 %
Total Annual Fund Operating Expenses ^(a)	2.21 %
Fee Waivers and Expense Reimbursement ^(a)	1.49 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.72 %

^(a) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense,

offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.72% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 74
3	\$ 547
5	\$ 1,048
10	\$ 2,427

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index and/or in investments that have economic characteristics that are substantially identical to the economic characteristics of the securities that comprise its benchmark index. The Index is comprised of the largest and most liquid stocks in the Chinese A-share market. As of December 31, 2012, the Index included 300 securities of companies with a market capitalization range of between approximately \$890 million and \$264.8 billion and a weighted average market capitalization of \$2.6 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

MARKET VECTORS CHINA ETF (continued)

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Index is comprised of China A-shares (A-shares). The Index is a modified free-float market capitalization weighted index composed of the largest and most liquid stocks in the Chinese A-share market. Constituent stocks for the Index must have been listed for more than three months (unless the stock's average daily A-share market capitalization since its initial listing ranks among the top 30 of all A-shares) and must not be experiencing obvious abnormal fluctuations or market manipulation.

A-shares are issued by companies incorporated in mainland China. A-shares are traded in renminbi (RMB) on the Shenzhen and Shanghai Stock Exchanges. The A-share market in the People's Republic of China (China or the PRC) is made available to domestic PRC investors and certain foreign investors, including principally those who have been approved as a Qualified Foreign Institutional Investor (QFII) and have obtained a QFII license or are appropriately licensed Hong Kong subsidiaries of certain domestic PRC financial institutions that have been approved as a Renminbi Qualified Foreign Institutional Investor (RQFII) and have obtained a RQFII license. A QFII or RQFII license may be obtained by application to the China Securities Regulatory Commission (CSRC). After obtaining a QFII or RQFII license, the QFII or RQFII would also apply to the China's State Administration of Foreign Exchange (SAFE) for a specific aggregate dollar amount investment quota (the A-share Quota) in which the QFII or RQFII can invest in A-shares. Investment companies are not currently within the types of entities that are eligible for a QFII or RQFII license.

In seeking to replicate the Index, the Fund will invest in swaps and other types of derivative instruments that have economic characteristics that are substantially identical to the economic characteristics of A-shares, including swaps on the Index and/or the A-shares which comprise the Index. The Adviser may obtain a QFII license and an A-share Quota and, subject to liquidity and repatriation issues, the Adviser, on behalf of the Fund, may invest in A-shares and other permitted China securities listed on the Shenzhen and Shanghai Stock Exchanges up to the specified A-share Quota. The Fund also may retain one or more sub-advisers that maintain RQFII licenses which allow such sub-advisers to invest in A-shares and not be subject to repatriation and liquidity constraints. See Additional Information About the Fund's Investment Strategies and Risks Risks of Investing in the Fund Investment and Repatriation Restrictions. Because the Fund does not satisfy the criteria to qualify as a QFII or RQFII itself, in order for the Fund to invest directly in A-shares, it must do so via the Adviser's or a sub-adviser's A-share Quota.

The Fund may also invest in swaps on funds that seek to replicate the performance of the Index or directly in securities of such funds. The notional values of these swaps and other derivative instruments will count towards the Fund's 80% investment policy and cash and cash equivalents related to the swaps and other derivative instruments will not be counted towards the calculation of total assets. Assets not invested in A-shares, swaps and other derivatives will be invested primarily in money market instruments.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Index concentrates in an industry or group of industries. As of December 31, 2012, the Index was concentrated in the financial services sector and each of the industrials and basic materials sectors represented a significant portion of the Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the

Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of the Fund's Investment Strategy. The Index is comprised of A-shares. In seeking to replicate the Index, the Fund may gain exposure to the A-share market by investing in swaps that are linked to the performance of A-shares and may invest directly in A-shares through an A-share Quota to be obtained by the Adviser and/or through a sub-adviser's A-share Quota. The Adviser's ability to manage the Fund will depend upon the availability of A-shares and the willingness of swap counterparties to engage in swaps with the Fund linked to the performance of such A-shares. To the extent that the A-share Quota of a potential swap counterparty is reduced or eliminated due to actions by the Chinese government or as a result of transactions entered into by the counterparty with other investors, the counterparty's ability to continue to enter into swaps or other derivative transactions with the Fund may be reduced or eliminated which could have a material adverse effect on the Fund. These risks are compounded by the fact that, at present, there are only a limited number of potential counterparties willing and able to enter into swap transactions linked to the performance of A-shares. Because the Fund would not be able to invest directly in A-shares in excess of an A-share Quota of the Adviser and/or a sub-adviser, the size of the Fund's investment in A-shares, if any, may be limited. In addition, the A-share Quota of the Adviser or a sub-adviser may be reduced or revoked by the Chinese regulators if, among other things, the Adviser or a sub-adviser fails to observe SAFE and other applicable Chinese regulations. The Fund

cannot predict what would occur if the A-share Quota of the Adviser or a sub-adviser were reduced or eliminated, although such an occurrence would likely have a material adverse effect on the Fund.

If the Fund is unable to obtain sufficient exposure to the performance of the Index due to the limited availability of swaps linked to the performance of A-shares or the A-share Quota of the Adviser or a sub-adviser being reduced or revoked, the Fund could, among other things, as a defensive measure suspend creations until the Adviser determines that the requisite exposure to the Index is obtainable. During the period that creations are suspended, the Fund could trade at a significant premium or discount to its net asset value (NAV) and could experience substantial redemptions. To the extent that such events result in a termination event under the Fund's swap agreements, the risks related to the limited availability of swaps would be compounded and the Fund may be adversely affected. Alternatively, the Fund could change its investment objective and could thus track an alternative index focused on Chinese-related stocks other than A-shares or other appropriate investments.

Specific rules governing taxes on capital gains derived by QFIIs and RQFIIs from the trading of PRC securities have yet to be announced. In the absence of specific rules, the Fund's tax treatment should be governed by the general PRC tax provisions and provisions applicable to QFIIs in the event the Fund invests directly in A-shares through the Adviser's A-share Quota (if obtained). Under those provisions, the Fund is subject to a tax of 10% on any dividends, distributions and interest it receives from its investment in PRC securities if the Fund invests directly in A-shares through the Adviser's A-share Quota (if obtained) and may be subject to such a tax if the Fund invests directly in A-shares through a sub-adviser's A-share Quota. The current PRC tax laws and regulations may be revised or amended in the future, and may be applied retroactively. Any revision or amendment in tax laws and regulations may adversely affect the Fund.

In addition, the Fund's investments in swaps and other derivative instruments may be less tax-efficient than direct investment in A-shares and may be subject to special U.S. federal income tax rules that could negatively affect the Fund. Also, the Fund may be required to periodically adjust its positions in its swaps and derivatives to comply with certain regulatory requirements which may further cause these investments to be less efficient than a direct investment in A-shares. In addition, because the application of these special rules may be uncertain, it is possible that the manner in which they are applied by the Fund may be determined to be incorrect and, as a result the Fund may be found to have failed to maintain its qualification as a regulated investment company (RIC) or to be subject to additional U.S. tax liability.

Special Risk Considerations of Investing in China and A-shares. Investing in securities of Chinese companies, including A-shares, involves certain risks and considerations not typically associated with investing in securities of U.S. issuers, including, among others, (i) the small size of the market for Chinese securities and the low volume of trading, resulting in lack of liquidity and in price volatility, (ii) currency devaluations and other currency exchange rate fluctuations or blockage, (iii) the nature and extent of intervention by the Chinese government in the Chinese securities markets, whether such intervention will continue and the impact of such intervention or its discontinuation, (iv) the risk of nationalization or expropriation of assets, (v) the risk that the Chinese government may decide not to continue to support economic reform programs; (vi) limitations on the use of brokers, (vii) higher rates of inflation, (viii) greater political, economic and social uncertainty and (ix) custody risks associated with investing through a QFII.

The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, interest rates, allocation of resources and capital reinvestment, among others; the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership; and actions of the Chinese central and local government authorities continue to have a substantial effect on economic conditions in China. In addition, previously the Chinese government has from time to time taken actions that influence the prices at which certain goods may be sold, encourage companies to invest or concentrate in particular industries,

induce mergers between companies in certain industries and induce private companies to publicly offer their securities to increase or continue the rate of economic growth, control the rate of inflation or otherwise regulate economic expansion. It may do so in the future as well, potentially having a significant adverse effect on economic conditions in China.

The Adviser's A-share Quota, if obtained, will be subject to repatriation restrictions that may adversely affect the Fund's ability to satisfy redemption requests. To the extent the Fund invests in A-shares through a sub-adviser with a RQFII license, such RQFIIs are currently permitted to repatriate daily and are not subject to repatriation restrictions or prior approval. However, there is no assurance that RQFIIs may not be subject to restrictions or prior approval requirements in the future, and any changes may be applied retroactively. Any additional restrictions imposed on RQFIIs may have an adverse effect on the Fund's ability to invest directly in A-shares if a sub-adviser is used.

The Chinese securities markets are emerging markets characterized by relatively low trading volume, resulting in substantially less liquidity and greater price volatility. These risks may be more pronounced for the A-share market than for Chinese securities markets generally because the A-share market is subject to greater government restrictions and control. In addition, there is less

MARKET VECTORS CHINA ETF (continued)

regulation and monitoring of Chinese securities markets and the activities of investors, brokers and other participants than in the United States. Accounting, auditing and financial reporting standards in China are different from U.S. standards and, therefore, disclosure of certain material information may not be made. In addition, less information may be available to the Fund and other investors than would be the case if the Fund's investments were restricted to securities of U.S. issuers. There is also generally less governmental regulation of the securities industry in China, and less enforcement of regulatory provisions relating thereto, than in the United States. Moreover, it may be more difficult to obtain a judgment in a court outside the United States.

The Chinese government strictly regulates the payment of foreign currency denominated obligations and sets monetary policy. In addition, the Chinese economy is export-driven and highly reliant on trade. Adverse changes to the economic conditions of its primary trading partners, such as the United States, Japan and South Korea, would adversely impact the Chinese economy and the Fund's investments. Moreover, the current major slowdown in other significant economies of the world, such as the United States, the European Union and certain Asian countries, may adversely affect economic growth in China. An economic downturn in China would adversely impact the Fund's investments.

Emerging markets such as China can experience high rates of inflation, deflation and currency devaluation. The value of the RMB may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in securities of Chinese issuers and the income received by the Fund will be partially in RMB. The Fund's exposure to the RMB and changes in value of the RMB versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the RMB.

Risk of Investing in Swaps. The Fund may invest in swaps on the Index or on securities comprising the Index. The Fund may also invest in swaps on other funds that track the Index or invest directly in the shares of such funds. The use of swap agreements entails certain risks, which may be different from, and possibly greater than, the risks associated with investing directly in the underlying asset for the swap agreement. Investments in swaps linked to the performance of A-shares are subject to general risks associated with A-shares and the QFII/RQFII system. It is not possible to predict the future development of the QFII/RQFII system and the CSRC may even impose restrictions on QFIIs or RQFIIs' operations. Such restrictions may adversely affect the ability of potential counterparties to enter into swaps linked to the performance of A-shares. In addition, the existence of a liquid trading market for the A-shares may depend on whether there is supply of, and demand for, such A-shares.

Because a swap is an obligation of the counterparty rather than a direct investment in A-shares, the Fund may suffer losses potentially equal to, or greater than, the full value of the swap if the counterparty fails to perform its obligations under the swap as a result of bankruptcy or otherwise. Any loss would result in a reduction in the NAV of the Fund and may impair the Fund's ability to achieve its investment objective. The counterparty risk associated with the Fund's investments is expected to be greater than most other funds because there are only a limited number of counterparties that are willing and able to enter into swaps on A-shares and the Fund expects to use swaps as the principal means to gain exposure to the Index. In fact, because there are so few potential counterparties, the Fund, subject to applicable law, may enter into swap transactions with as few as one counterparty at any time.

The swaps market is subject to extensive regulation under the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) and certain SEC and CFTC rules promulgated thereunder. It is possible that developments in the swaps market, including new and additional government regulation, could result in higher Fund costs and expenses and could adversely affect the Fund's ability, among other things, to enter into or to terminate existing swap agreements or to realize amounts to be received under such agreements.

Risk of Investing in Other Funds. The Fund may invest in shares of other funds, including exchange-traded funds (ETFs). As a result, the Fund will indirectly be exposed to the risks of an investment in the underlying funds. As a

shareholder in a fund (as with ETFs), the Fund would bear its ratable share of that entity's expenses. At the same time, the Fund would continue to pay its own investment management fees and other expenses. As a result, the Fund and its shareholders will be absorbing duplicate levels of fees with respect to investments in other funds, including ETFs.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may

negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in the Financial Services Sector. The financial services sector includes engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of

medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the stock market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). Because the Fund bears

MARKET VECTORS CHINA ETF (continued)

the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Index, the Fund's return may deviate significantly from the return of the Index. In addition, the Fund may not be able to invest in certain securities included in the Index or invest in them in the exact proportions they represent of the Index, due to legal restrictions or limitations imposed by the Chinese Government or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its NAV based on fair value prices and the value of the Index is based on securities' closing prices on local foreign markets (i.e., the value of the Index is not based on fair value prices), the Fund's ability to track the Index may be adversely affected. Because swaps on A-shares are denominated in U.S. dollars and the underlying A-shares represented by the swaps are denominated in Chinese RMB, the ability of the Fund to track the Index is in part subject to foreign exchange fluctuations as between the U.S. dollar and the RMB. The terms of the swaps require the payment of the U.S. dollar equivalent of the RMB distributions and dividends received by the QFII, meaning that the Fund is exposed to foreign exchange risk and fluctuations in value between the U.S. dollar and the RMB.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most other ETFs, the Fund expects to effect all of its creations and redemptions for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Index, the Fund's assets are concentrated in the financial services sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's

average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 11.35% 4Q 12

Worst Quarter: -15.10% 3Q 11

Average Annual Total Returns for the Periods Ended December 31, 2012. The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (10/13/2010)
Market Vectors China ETF (return before taxes)	9.54 %	-7.69 %
Market Vectors China ETF (return after taxes on distributions)	9.54 %	-8.10 %
Market Vectors China ETF (return after taxes on distributions and sale of Fund Shares)	6.20 %	-6.70 %
CSI 300 Index (reflects no deduction for fees, expenses or taxes)	10.92 %	-6.22 %
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	16.00 %	11.38 %

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	October 2010
George Cao	Portfolio Manager	October 2010

PURCHASE AND SALE OF FUND SHARES

The Fund issues and redeems Shares at NAV only in a large specified number of Shares each called a Creation Unit, or multiples thereof. A Creation Unit consists of 50,000 Shares.

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Fund are listed on NYSE Arca, Inc. (NYSE Arca) and because Shares trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than or less than NAV.

TAX INFORMATION

The Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.

ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT STRATEGIES AND RISKS

PRINCIPAL INVESTMENT STRATEGIES

The Adviser anticipates that, generally, the Fund will hold or gain exposure to all of the securities that comprise the Index in proportion to their weightings in the Index. However, under various circumstances, it may not be possible or practicable to purchase all of those securities in those weightings. In these circumstances, the Fund may purchase a sample of securities in the Index. There also may be instances in which the Adviser may choose to underweight or overweight a security in the Index, purchase securities not in the Index that the Adviser believes are appropriate to substitute for certain securities in the Index or utilize various combinations of other available investment techniques in seeking to replicate as closely as possible, before fees and expenses, the price and yield performance of the Index. The Fund may sell securities that are represented in the Index in anticipation of their removal from the Index or purchase securities not represented in the Index in anticipation of their addition to the Index. The Fund may also, in order to comply with the tax diversification requirements of the Internal Revenue Code of 1986, as amended (Internal Revenue Code), temporarily invest in securities not included in the Index that are expected to be highly correlated with the securities included in the Index. The Fund may also invest, to the extent permitted by the 1940 Act, in other affiliated and unaffiliated funds, such as open-end or closed-end management investment companies, including other ETFs.

ADDITIONAL INVESTMENT STRATEGIES

The Fund may invest in securities not included in the Index, money market instruments, including repurchase agreements or other funds which invest exclusively in money market instruments, convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index), and certain derivatives. In addition, the Fund may invest in B-shares, which are shares of companies incorporated in mainland China that are traded in the mainland B-share markets; China H-shares, which are shares of companies incorporated in mainland China and listed on the Hong Kong Stock Exchange; securities of Red Chip Companies, which are companies with certain minimum proportions of mainland Chinese entity shareholders that are incorporated outside mainland China and listed on the Hong Kong Stock Exchange; and securities of Chinese-related companies, which are companies listed on the Hong Kong Stock Exchange, the Singapore Stock Exchange or other exchanges. Convertible securities, depositary receipts and derivative instruments such as swaps, options, warrants, futures contracts, currency forwards, structured notes and participation notes may be used by the Fund in seeking performance that corresponds to the Index, and in managing cash flows, and may count towards compliance with the Fund's 80% policy. The Fund will not invest in money market instruments as part of a temporary defensive strategy to protect against potential stock market declines.

An authorized participant (i.e., a person eligible to place orders with the Distributor (defined below) to create or redeem Creation Units of the Fund) that is not a qualified institutional buyer, as such term is defined under Rule 144A of the Securities Act of 1933, as amended (Securities Act), will not be able to receive, as part of a redemption, restricted securities eligible for resale under Rule 144A.

BORROWING MONEY

The Fund may borrow money from a bank up to a limit of one-third of the market value of its assets. To the extent that the Fund borrows money, it will be leveraged; at such times, the Fund will appreciate or depreciate in value more rapidly than the Index.

FUNDAMENTAL AND NON-FUNDAMENTAL POLICIES

The Fund's investment objective and each of its other investment policies are non-fundamental policies that may be changed by the Board of Trustees without shareholder approval, except as noted in this Prospectus or in the Statement of Additional Information (SAI) under the section entitled Investment Policies and Restrictions Investment

Restrictions.

LENDING PORTFOLIO SECURITIES

The Fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the Fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being loaned. This collateral is marked-to-market on a daily basis. Although the Fund will receive collateral in connection with all loans of its securities holdings, the Fund would be exposed to a risk of loss should a borrower fail to return the borrowed securities (e.g., the Fund would have to buy replacement securities and the loaned securities may have appreciated beyond the value of the collateral held by the Fund) or become insolvent. The Fund may pay fees to the party arranging the loan of securities. In addition, the Fund will bear the risk of loss of any cash collateral that it invests.

RISKS OF INVESTING IN THE FUND

The following section provides additional information regarding the principal risks identified under **Principal Risks of Investing in the Fund** in the Fund's **Summary Information** section followed by additional risk information.

8

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in China. If the Fund is able to invest in A-shares in reliance on the A-share Quota of the Adviser or a sub-adviser, the size of the Fund's investment in A-shares, if any, may be significantly limited by the size or availability of such A-share Quota. In addition, there are significant restrictions on the repatriation of gains and income related to an A-share Quota obtained by the Adviser that may affect the Fund's ability to satisfy redemption requests. See **Additional Information About the Fund's Investment Strategies and Risks** **Risks of Investing in the Fund** **Investment and Repatriation Restrictions**.

Whether the Fund invests indirectly in China through swaps or other means described in this Prospectus or by investing directly in A-shares, investments in China involve certain risks and special considerations, including the following:

Political and Economic Risk. The economy of China, which has been in a state of transition from a planned economy to a more market oriented economy, differs from the economies of most developed countries in many respects, including the level of government involvement, its state of development, its growth rate, control of foreign exchange, and allocation of resources. Although the majority of productive assets in China are still owned by the PRC government at various levels, in recent years, the PRC government has implemented economic reform measures emphasizing utilization of market forces in the development of the economy of China and a high level of management autonomy. The economy of China has experienced significant growth in the past 30 years, but growth has been uneven both geographically and among various sectors of the economy. Economic growth has also been accompanied by periods of high inflation. The PRC government has implemented various measures from time to time to control inflation and restrain the rate of economic growth.

For more than 30 years, the PRC government has carried out economic reforms to achieve decentralization and utilization of market forces to develop the economy of the PRC. These reforms have resulted in significant economic growth and social progress. There can, however, be no assurance that the PRC government will continue to pursue such economic policies or, if it does, that those policies will continue to be successful. Any such adjustment and modification of those economic policies may have an adverse impact on the securities market in the PRC as well as the underlying securities of the Index. Further, the PRC government may from time to time adopt corrective measures to control the growth of the PRC economy which may also have an adverse impact on the capital growth and performance of the Fund.

Political changes, social instability and adverse diplomatic developments in the PRC could result in the imposition of additional government restrictions including expropriation of assets, confiscatory taxes or nationalization of some or all of the property held by the underlying issuers of the A-shares in the Index.

The laws, regulations, including the investment regulations allowing QFIIs and RQFIIs to invest in A-shares, government policies and political and economic climate in China may change with little or no advance notice. Any such change could adversely affect market conditions and the performance of the Chinese economy and, thus, the value of securities in the Fund's portfolio.

Since 1949, the PRC has been a socialist state controlled by the Communist party. China has only recently opened up to foreign investment and has only begun to permit private economic activity. There is no guarantee that the Chinese government will not revert from its current open-market economy to the economic policy of central planning that it implemented prior to 1978.

The Chinese government continues to be an active participant in many economic sectors through ownership positions and regulation. The allocation of resources in China is subject to a high level of government control. The Chinese government strictly regulates the payment of foreign currency denominated obligations and sets monetary policy. Through its policies, the government may provide preferential treatment to particular industries or companies. The policies set by the government could have a substantial effect on the Chinese economy and the Fund's investments.

The Chinese economy is export-driven and highly reliant on trade. The performance of the Chinese economy may differ favorably or unfavorably from the U.S. economy in such respects as growth of gross domestic product, rate of inflation, currency depreciation, capital reinvestment, resource self-sufficiency and balance of payments position. Adverse changes to the economic conditions of its primary trading partners, such as the United States, Japan and South Korea, would adversely impact the Chinese economy and the Fund's investments.

China has been transitioning to a market economy since the late seventies, reaffirming its economic policy reforms through five-year programs, the latest of which (for 2011 through 2015) was approved in March 2011. Under the economic reforms implemented by the Chinese government, the Chinese economy has experienced tremendous growth, developing into one of

**ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT STRATEGIES AND RISKS
(continued)**

the largest and fastest growing economies in the world. There is no assurance, however, that such growth will be sustained in the future.

Moreover, the current major slowdown in other significant economies of the world, such as the United States, the European Union and certain Asian countries, may adversely affect economic growth in China. An economic downturn in China would adversely impact the Fund's investments.

Inflation. Economic growth in China has also historically been accompanied by periods of high inflation. Beginning in 2004, the Chinese government commenced the implementation of various measures to control inflation, which included the tightening of the money supply, the raising of interest rates and more stringent control over certain industries. If these measures are not successful, and if inflation were to steadily increase, the performance of the Chinese economy and the Fund's investments could be negatively impacted.

Tax Changes. The Chinese system of taxation is not as well settled as that of the United States. In addition, changes in the Chinese tax system may have retroactive effects.

Nationalization and Expropriation. After the formation of the Chinese socialist state in 1949, the Chinese government renounced various debt obligations and nationalized private assets without providing any form of compensation. There can be no assurance that the Chinese government will not take similar actions in the future. Accordingly, an investment in the Fund involves a risk of a total loss.

Hong Kong Policy. As part of Hong Kong's transition from British to Chinese sovereignty in 1997, China agreed to allow Hong Kong to maintain a high degree of autonomy with regard to its political, legal and economic systems for a period of at least 50 years. China controls matters that relate to defense and foreign affairs. Under the agreement, China does not tax Hong Kong, does not limit the exchange of the Hong Kong dollar for foreign currencies and does not place restrictions on free trade in Hong Kong. However, there is no guarantee that China will continue to honor the agreement, and China may change its policies regarding Hong Kong at any time. Any such change could adversely affect market conditions and the performance of the Chinese economy and, thus, the value of securities in the Fund's portfolio.

Chinese Securities Markets. The securities markets in China have a limited operating history and are not as developed as those in the United States. These markets tend to be smaller in size, have less liquidity and historically have had greater volatility than markets in the United States and some other countries. In addition, there is less regulation and monitoring of Chinese securities markets and the activities of investors, brokers and other participants than in the United States. Accordingly, issuers of securities in China are not subject to the same degree of regulation as are U.S. issuers with respect to such matters as insider trading rules, tender offer regulation, stockholder proxy requirements and the requirements mandating timely disclosure of information. Stock markets in China are in the process of change and further development. This may lead to trading volatility, difficulty in the settlement and recording of transactions and difficulty in interpreting and applying the relevant regulations.

Available Disclosure About Chinese Companies. Disclosure and regulatory standards in emerging market countries, such as China, are in many respects less stringent than U.S. standards. There is substantially less publicly available information about Chinese issuers than there is about U.S. issuers. Therefore, disclosure of certain material information may not be made, and less information may be available to the Fund and other investors than would be the case if the Fund's investments were restricted to securities of U.S. issuers. Chinese issuers are subject to accounting, auditing and financial standards and requirements that differ, in some cases significantly, from those applicable to U.S. issuers. In particular, the assets and profits appearing on the financial statements of a Chinese issuer may not reflect its financial position or results of operations in the way they would be reflected had such financial

statements been prepared in accordance with U.S. Generally Accepted Accounting Principles.

Chinese Corporate and Securities Law. The regulations on investments and repatriation of capital by QFIIs and RQFIIs are relatively new. As a result, the application and interpretation of such investment regulations are therefore relatively untested. In addition, PRC authorities have broad discretion in this regard. The Fund's rights with respect to its investments in A-shares, if any, generally will not be governed by U.S. law, and instead will generally be governed by Chinese law. China operates under a civil law system, in which court precedent is not binding. Because there is no binding precedent to interpret existing statutes, there is uncertainty regarding the implementation of existing law.

Legal principles relating to corporate affairs and the validity of corporate procedures, directors' fiduciary duties and liabilities and stockholders' rights often differ from those that may apply in the United States and other countries. Chinese laws providing protection to investors, such as laws regarding the fiduciary duties of officers and directors, are undeveloped and will not provide investors, such as the Fund, with protection in all situations where protection would be provided by comparable law in the United States. China lacks a national set of laws that address all issues that may arise with regard to a foreign investor such as the Fund.

It may therefore be difficult for the Fund to enforce its rights as an investor under Chinese corporate and securities laws, and it may be difficult or impossible for the Fund to obtain a judgment in court. Moreover, as Chinese corporate and securities laws continue to develop, these developments may adversely affect foreign investors, such as the Fund.

Investments in A-shares. Currently, there are two stock exchanges in mainland China, the Shanghai and Shenzhen Stock Exchanges, and there is one stock exchange in Hong Kong. The Shanghai and Shenzhen Stock Exchanges are supervised by the CSRC and are highly automated with trading and settlement executed electronically. The Shanghai and Shenzhen Stock Exchanges are substantially smaller, less liquid and more volatile than the major securities markets in the United States. In comparison to the mainland Chinese securities markets, the securities markets in Hong Kong are relatively well developed and active.

The Shanghai Stock Exchange commenced trading on December 19, 1990, the Shenzhen Stock Exchange commenced trading on July 3, 1991 and the Hong Kong Stock Exchange commenced trading on April 2, 1986. The Shanghai and Shenzhen Stock Exchanges divide listed shares into two classes: A-shares and B-shares. Companies whose shares are traded on the Shanghai and Shenzhen Stock Exchanges that are incorporated in mainland China may issue both A-shares and B-shares. In China, the A-shares and B-shares of an issuer may only trade on one exchange. A-shares and B-shares may both be listed on either the Shanghai or Shenzhen Stock Exchanges. Both classes represent an ownership interest comparable to a share of common stock and all shares are entitled to substantially the same rights and benefits associated with ownership. A-shares are traded on the Shanghai and Shenzhen Stock Exchanges in RMB. Most repatriations of gains and income on A-shares require the approval of SAFE. Further, no single underlying foreign investor investing through a QFII (*e.g.*, the Fund) may hold more than 10% of the total outstanding shares in one listed company and all foreign investors investing through QFIIs (*e.g.*, the Fund) may not hold, in aggregate, more than 30% of the total outstanding shares in one listed company. Such limits may not apply where foreign investors make strategic investment in listed companies in accordance with the Measures for the Administration of Strategic Investments in Listed Companies by Foreign Investors. In September 2009, SAFE issued the Measures on the Foreign Exchange Administration of the Securities Investments of Qualified Foreign Institutional Investors in the PRC, which regulates the foreign exchange activities of QFIIs, which was recently updated.

As of February 28, 2013, the CSRC had granted licenses to 186 QFIIs bringing total investment quotas to US\$40.835 billion in A-shares and other permitted securities. Because restrictions continue to exist and capital therefore cannot flow freely into the A-share market, it is possible that in the event of a market disruption, the liquidity of the A-share market and trading prices of A-shares could be more severely affected than the liquidity and trading prices of markets where securities are freely tradable and capital therefore flows more freely. The Fund cannot predict the nature or duration of such a market disruption or the impact that it may have on the A-share market and the short-term and long-term prospects of its investments in the A-share market.

The Chinese government has in the past taken actions that benefited holders of A-shares. As A-shares become more available to foreign investors, such as the Fund, the Chinese government may be less likely to take action that would benefit holders of A-shares. In addition, there is no guarantee that the Adviser or a sub-adviser will continue to benefit from the A-share Quota if the A-share Quota is reduced or eliminated by SAFE or if an Adviser's or a sub-adviser's QFII or RQFII license, respectively, is revoked at some point in the future. The Fund cannot predict what would occur if an A-share Quota of the Adviser or a sub-adviser were reduced or eliminated, although such an occurrence would likely have a material adverse effect on the Fund.

From time to time, certain of the companies in which the Fund expects to invest may operate in, or have dealings with, countries subject to sanctions or embargoes imposed by the U.S. Government and the United Nations and/or countries identified by the U.S. Government as state sponsors of terrorism. A company may suffer damage to its reputation if it is identified as a company which operates in, or has dealings with, countries subject to sanctions or embargoes imposed by the U.S. Government and the United Nations and/or countries identified by the U.S. Government as state sponsors of terrorism. As an investor in such companies, the Fund will be indirectly subject to those risks.

Investment and Repatriation Restrictions. Investments by the Fund in A-shares (through an A-share Quota obtained by the Adviser) and, whether the Fund invests through the Adviser or a sub-adviser, other Chinese financial instruments regulated by the CSRC, including Chinese government bonds, convertible bonds, corporate bonds, warrants and open- and closed-end investment companies, are subject to governmental pre-approval limitations on the quantity that the Fund may purchase or limits on the classes of securities in which the Fund may invest.

When and if the Fund invests directly in the A-share market (through an A-share Quota obtained by the Adviser), the Adviser would be required to transfer the entire investment principal for its A-share Quota into a local sub-custodian account within such time period as specified by SAFE (up to six months). Following this, investment capital will be subject to an initial lock-

**ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT STRATEGIES AND RISKS
(continued)**

up period (currently three months), during which the assets may not be repatriated to the United States, even if they are never invested in A-shares. Following that time, investment principal and earnings may generally only be repatriated with the approval of SAFE, although repatriation may be conducted on a monthly basis where it does not exceed 20% of the QFII's total investment in the PRC at the end of the last year. These limitations on repatriation of the Fund's assets may adversely affect the Fund's ability to meet redemption requests and/or may cause the Fund to borrow money in order to meet its obligations. See Additional Information About the Fund's Investment Strategies and Risks-Borrowing Money. These limitations may also prevent the Fund from making certain distributions to stockholders. Repatriations by RQFIIs are permitted daily and are not subject to any lock-up periods or prior approval. There is no assurance, however, that PRC rules and regulations will not change or that repatriation restrictions will not be imposed in the future. Any restrictions on repatriation of the Fund's assets may adversely affect the Fund's ability to meet redemptions requests.

The Chinese government limits foreign investment in the securities of certain Chinese issuers entirely if foreign investment is banned in respect of the industry in which the relevant Chinese issuers are conducting their business. These restrictions or limitations may have adverse effects on the liquidity and performance of the Fund holdings as compared to the performance of the Index. This may increase the risk of tracking error.

To the extent the Fund does not distribute to stockholders all of its investment company taxable income and net capital gain in a given year, it will be required to pay U.S. federal income tax on the retained income and gains, thereby reducing the Fund's return. The Fund may elect to treat its net capital gain as having been distributed to stockholders. In that case, stockholders of record on the last day of the Fund's taxable year will be required to include their attributable share of the retained gain in income for the year as a long-term capital gain despite not actually receiving the dividend, and will be entitled to a tax credit or refund for the tax deemed paid on their behalf by the Fund as well as an increase in the basis of their shares to reflect the difference between their attributable share of the gain and the related credit or refund.

Risk of Loss of Favorable U.S. Tax Treatment. The Fund intends to distribute annually all or substantially all of its investment company taxable income and net capital gain. However, if the Fund does not receive approval from SAFE to repatriate funds associated with direct investment in A-shares on a timely basis, it may be unable to satisfy the distribution requirements required to qualify for the favorable tax treatment otherwise generally afforded to RICs under the Internal Revenue Code. If the Fund fails to qualify for any taxable year as a RIC, the Fund would be treated as a corporation subject to U.S. federal income tax, thereby subjecting any income earned by the Fund to tax at the corporate level currently at a 35% U.S. federal tax rate and, when such income is distributed, to a further tax at the stockholder level to the extent of the Fund's current or accumulated earnings and profits. In addition, the Fund would not be eligible for a deduction for dividends paid to shareholders.

Foreign Exchange Control. The Chinese government heavily regulates the domestic exchange of foreign currencies within China. Chinese law requires that all domestic transactions must be settled in RMB, places significant restrictions on the remittance of foreign currency and strictly regulates currency exchange from RMB. Under SAFE regulations, Chinese corporations may only purchase foreign currencies through government approved banks. In general, Chinese companies must receive approval from or register with the Chinese government before investing in certain capital account items, including direct investments and loans, and must thereafter maintain separate foreign exchange accounts for the capital items. Foreign investors may only exchange foreign currencies at specially authorized banks after complying with documentation requirements. These restrictions may adversely affect the Fund and its investments. The international community has requested that China ease its restrictions on currency exchange, but it is unclear whether the Chinese government will change its policy.

Custody Risks of Investing in A-shares. A PRC sub-custodian, which is approved by CSRC and SAFE as a qualified QFII or RQFII custodian (the PRC sub-custodian), may be appointed to provide custody services to the Fund's assets and investments in the PRC. A-shares that are traded on the Shanghai or Shenzhen Stock Exchange are dealt and held in book-entry form through the China Securities Depository and Clearing Corporation Limited (CSDCC). To the extent the Fund invests directly in A-shares, securities purchased by the Adviser, in its capacity as a QFII or a sub-adviser, in its capacity as a RQFII, on behalf of the Fund, may be received by the CSDCC as credited to a securities trading account maintained by the PRC sub-custodian in the joint names of the Fund and the Adviser as a QFII or a sub-adviser as a RQFII, respectively, the Fund will pay the cost of the account. The Adviser or sub-adviser may not use the account for any other purpose than for maintaining the Fund's assets. However, given that the securities trading account will be maintained in the joint names of the Adviser or a sub-adviser and the Fund, the Fund's assets may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Fund. In particular, there is a risk that creditors of the Adviser or a sub-adviser may assert that the securities are owned by the Adviser or a sub-adviser and not the Fund, and that a court would uphold such an assertion, in which case creditors of the Adviser or a sub-adviser could seize assets of the Fund.

Because the Adviser's or a sub-adviser's A-share Quota would be in the name of the Adviser or sub-adviser rather than the Fund, there is a risk that regulatory actions taken against the Adviser or sub-adviser by PRC government authorities may affect the Fund.

Use of Brokers. To the extent the Fund invests directly in A-shares, regulations adopted by the CSRC and SAFE specify that all securities traded by the Adviser and/or a sub-adviser, if licensed as a QFII and/or a RQFII, respectively, on behalf of the Fund must be executed through one of three specified brokers per exchange. Prior to the adoption of these regulations, QFIIs and RQFIIs were required to execute trades of securities through a single specified broker for each of the Shanghai Stock Exchange and Shenzhen Stock Exchange. However, the recently adopted measures may not have been implemented by either the Shanghai Stock Exchange or the Shenzhen Stock Exchange and it is uncertain when these measures will be implemented or whether they will be effectuated in an efficient manner. As a result, the Adviser and/or a sub-adviser will have less flexibility to choose among brokers on behalf of the Fund than is typically the case for investment managers.

Foreign Currency Considerations. To the extent the Fund invests directly in A-shares, the Fund's assets will be invested primarily in the equity securities of issuers in China and the income received by the Fund will be partially in RMB. Meanwhile, the Fund will compute and expects to distribute its income in U.S. dollars, and the computation of income will be made on the date that the income is earned by the Fund at the foreign exchange rate in effect on that date. Therefore, if the value of the RMB falls relative to the U.S. dollar between the earning of the income and the time at which the Fund converts the RMB to U.S. dollars, the Fund may be required to liquidate certain positions in order to make distributions if the Fund has insufficient cash in U.S. dollars to meet distribution requirements under the Internal Revenue Code. The liquidation of investments, if required, may also have an adverse impact on the Fund's performance.

Furthermore, the Fund may incur costs in connection with conversions between U.S. dollars and RMB. Foreign exchange dealers realize a profit based on the difference between the prices at which they are buying and selling various currencies. Thus, a dealer normally will offer to sell a foreign currency to the Fund at one rate, while offering a lesser rate of exchange should the Fund desire immediately to resell that currency to the dealer. The Fund will conduct its foreign currency exchange transactions either on a spot (*i.e.*, cash) basis at the spot rate prevailing in the foreign currency exchange market, or through entering into forward, futures or options contracts to purchase or sell foreign currencies.

Currently, there is no market in China in which the Fund may engage in hedging transactions to minimize RMB foreign exchange risk, and there can be no guarantee that instruments suitable for hedging currency will be available to the Fund in China at any time in the future. In the event that in the future it becomes possible to hedge RMB currency risk in China, the Fund may seek to protect the value of some portion or all of its portfolio holdings against currency risks by engaging in hedging transactions. In that case, the Fund may enter into forward currency exchange contracts and currency futures contracts and options on such futures contracts, as well as purchase put or call options on currencies, in China. Currency hedging would involve special risks, including possible default by the other party to the transaction, illiquidity and, to the extent the Adviser's view as to certain market movements is incorrect, the risk that the use of hedging could result in losses greater than if they had not been used. The use of currency transactions could result in the Fund's incurring losses as a result of the imposition of exchange controls, exchange rate regulation, suspension of settlements or the inability to deliver or receive a specified currency.

Disclosure of Interests and Short Swing Profit Rule. The Fund may be subject to shareholder disclosure of interest regulations promulgated by the CSRC. These regulations currently require the Fund to make certain public disclosures when the Fund and parties acting in concert with the Fund acquire 5% or more of the issued securities of a listed company (which include A-shares and B-shares of the listed company). If the reporting requirement is triggered, the Fund will be required to report information which includes, but is not limited to: (a) information about the Fund and the type and extent of its holdings in the company; (b) a statement of the Fund's purposes for the investment and

whether the Fund intends to increase its holdings over the following 12-month period; (c) a statement of the Fund's historical investments in the company over the previous six months; (d) the time of, and other information relating to, the transaction that triggered the Fund's holding in the listed company reaching the 5% reporting threshold; and (e) other information that may be required by the CSRC or the stock exchange. Additional information may be required if the Fund and its concerted parties constitute the largest shareholder or actual controlling shareholder of the listed company. The report must be made to the CSRC, the stock exchange, the invested company, and the CSRC local representative office where the listed company is located. The Fund would also be required to make a public announcement through a media outlet designated by the CSRC. The public announcement must contain the same content as the official report.

The relevant PRC regulations presumptively treat all affiliated investors and investors under common control as parties acting in concert. As such, under a conservative interpretation of these regulations, the Fund may be deemed as a concerted party of other funds managed by the Adviser or its affiliates and therefore may be subject to the risk that the Fund's

ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT STRATEGIES AND RISKS
(continued)

holdings may be required to be reported in the aggregate with the holdings of such other funds should the aggregate holdings trigger the reporting threshold under the PRC law.

If the 5% shareholding threshold is triggered by the Fund and parties acting in concert with the Fund, the Fund would be required to file its report within three days of the date the threshold is reached. During the time limit for filing the report, a trading freeze applies and the Fund would not be permitted to make subsequent trades in the invested company's securities. Any such trading freeze may undermine the Fund's performance, if the Fund would otherwise make trades during that period but is prevented from doing so by the regulation.

Once the Fund and parties acting in concert reach the 5% trading threshold as to any listed company, any subsequent incremental increase or decrease of 5% or more will trigger a further reporting requirement and an additional three-day trading freeze, and also an additional freeze on trading within two days of the Fund's report and announcement of the incremental change. These trading freezes may undermine the Fund's performance as described above. Also, Shanghai Stock Exchange requirements currently require the Fund and parties acting in concert, once they have reached the 5% threshold, to disclose whenever their shareholding drops below this threshold (even as a result of trading which is less than the 5% incremental change that would trigger a reporting requirement under the relevant CSRC regulation).

CSRC regulations also contain additional disclosure (and tender offer) requirements that apply when an investor and parties acting in concert reach thresholds of 20% and greater than 30% shareholding in a company. Because no single underlying foreign investor investing through a QFII (e.g., the Fund) may currently hold more than 10% of the total outstanding shares in one listed company, it is currently unlikely that the Fund's trading would trigger the more detailed reporting or tender offer requirements at the higher thresholds.

Subject to the interpretation of PRC courts and PRC regulators, the operation of the PRC short swing profit rule may be applicable to the trading of the Fund with the result that where the holdings of the Fund (possibly with the holdings of other investors deemed as concert parties of the Fund) exceed 5% of the total issued shares of a listed company, the Fund may not reduce its holdings in the company within six months of the last purchase of shares of the company. If the Fund violates the rule, it may be required by the listed company to return any profits realized from such trading to the listed company. In addition, the rule limits the ability of the Fund to repurchase securities of the listed company within six months of such sale. Moreover, under PRC civil procedures, the Fund's assets may be frozen to the extent of the claims made by the company in question. These risks may greatly impair the performance of the Fund.

Risk of Investing in Swaps. The Fund may invest in swaps on the Index or on securities comprising the Index. The Fund may also invest in swaps on other funds that track the Index or invest directly in the shares of such funds. The use of swap agreements entails certain risks, which may be different from, and possibly greater than, the risks associated with investing directly in the underlying asset for the swap agreement. These risks include:

Limited Availability of Swaps. The Adviser's ability to manage the Fund in accordance with its stated investment objective will depend upon the continuing availability of A-shares and the willingness and ability of potential swap counterparties to engage in swaps with the Fund linked to the performance of A-shares. To the extent that the A-share Quota of a potential swap counterparty is reduced or eliminated due to actions by the Chinese government or as a result of transactions entered into by the counterparty with other investors, the counterparty's ability to continue to enter into swaps or other derivative transactions with the Fund may be reduced or eliminated, which could have a material adverse effect on the Fund. These risks are compounded by the fact that at present there are only a limited number of potential counterparties willing and able to enter into swap transactions linked to the performance of A-shares. Furthermore, swaps are of limited duration and there is no guarantee that swaps entered into with a counterparty will continue indefinitely. Accordingly, the duration of a swap depends on, among other things, the

ability of the Fund to renew the expiration period of the relevant swap at agreed upon terms. In addition, under the current regulations regarding A-share Quotas of QFIIs or RQFIIs administered by SAFE, QFIIs and RQFIIs are prohibited from transferring or selling their quotas to any third party. However, there is uncertainty over how this prohibition is implemented. Therefore, subject to interpretation by SAFE, QFIIs or RQFIIs may be limited or prohibited from providing the Fund access to A-share Quotas by entering into swap or other derivative transactions, which, in turn, could adversely affect the Fund.

Counterparty Risk. Because a swap is an obligation of the counterparty rather than a direct investment in A-shares, the Fund may suffer losses potentially equal to, or greater than, the full value of the swap if the counterparty fails to perform its obligations under the swap as a result of bankruptcy or otherwise. Any loss would result in a reduction in the NAV of the Fund and will likely impair the Fund's ability to achieve its investment objective. The counterparty risk associated with the Fund's investments is expected to be greater than most other funds because there are only a limited number of counterparties that are willing and able to enter into swaps on A-shares and the Fund expects to use swaps as the

principal means to gain exposure to the Index. In fact, because there are so few potential counterparties, the Fund, subject to applicable law, may enter into swap transactions with as few as one counterparty at any time.

Liquidity Risk. Swap agreements may be subject to liquidity risk, which exists when a particular swap is difficult to purchase or sell. If a swap transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses to the Fund. This is especially true given the limited number of potential counterparties willing and able to enter into swap transactions on A-shares. In addition, a swap transaction may be subject to the Fund's limitation on investments in illiquid securities. Swap agreements may be subject to pricing risk, which exists when a particular swap agreement becomes extraordinarily expensive (or inexpensive) relative to historical prices or the prices of corresponding cash market instruments. The swaps market is subject to extensive regulation under the Dodd-Frank Act and certain SEC and CFTC rules promulgated thereunder. It is possible that developments in the swaps market, including new and additional government regulation, could result in higher Fund costs and expenses and could adversely affect the Fund's ability, among other things, to enter into or to terminate existing swap agreements or to realize amounts to be received under such agreements.

Tax Risk. Specific rules governing taxes on capital gains derived by QFIIs and RQFIIs from the trading of PRC securities have yet to be announced. In the absence of specific rules, the Fund's tax treatment should be governed by the general PRC tax provisions and provisions applicable to QFIIs in the event the Fund invests directly in A-shares through the Adviser's A-share Quota (if obtained). Under those provisions, the Fund is subject to a tax of 10% on any dividends, distributions and interest it receives from its investment in PRC securities if the Fund invests directly in A-shares through the Adviser's A-share Quota (if obtained), and may be subject to such a tax if the Fund invests directly in A-shares through a sub-adviser's A-share Quota. The current PRC tax laws and regulations may be revised or amended in the future, and may be applied retroactively. Any revision or amendment in tax laws and regulations may adversely affect the Fund.

In addition, when the Fund sells a swap on A-shares, the sale price may take account of the QFII's tax liability. Unlike some other funds which also have direct or indirect access to A-shares, the Fund does not make any provision for the PRC capital gain tax. Accordingly, in the event that such tax is, in fact, levied and the Fund's swap counterparties have also not made any provision for such tax, the Fund may suffer more of an impact than if the Fund had made such provision and may also adversely affect the Fund's ability to track the Index.

The Fund's investments in swaps and other derivative instruments may be less tax-efficient than a direct investment in A-shares. Investments in swaps and other derivatives may be subject to special U.S. federal income tax rules that could negatively affect the character, timing and amount of income earned by the Fund (*e.g.*, by causing amounts that would be capital gain to be taxed as ordinary income or to be taken into income earlier than would otherwise be necessary). Also, the Fund may be required to periodically adjust its positions in its swaps and derivatives to comply with certain regulatory requirements which may further cause these investments to be less efficient than a direct investment in A-shares. For example, swaps in which the Fund will invest may need to be reset on a regular basis in order to maintain compliance with the 1940 Act, which may increase the likelihood that the Fund will generate short-term capital gains. In addition, because the application of these special rules may be uncertain, it is possible that the manner in which they are applied by the Fund may be determined to be incorrect. In that event, the Fund may be found to have failed to maintain its qualification as a regulated investment company (RIC) or to be subject to additional U.S. tax liability. Moreover, the Fund may make investments, both directly and through swaps or other derivative positions, in companies classified as passive foreign investment companies for U.S. federal income tax purposes (PFICs). Investments in PFICs are subject to special tax rules which may result in adverse tax consequences to the Fund and its shareholders.

Risk of Investing in Other Funds. The Fund may invest in shares of other funds, including ETFs that track the Index. As a result, the Fund will indirectly be exposed to the risks of an investment in the underlying funds. Shares of other

funds have many of the same risks as direct investments in common stocks or bonds. In addition, the market value of such funds' shares is expected to rise and fall as the value of the underlying index or bond rises and falls. The market value of such funds' shares may differ from the net asset value of the particular fund. As a shareholder in a fund (as with ETFs), the Fund would bear its ratable share of that entity's expenses. At the same time, the Fund would continue to pay its own investment management fees and other expenses. As a result, the Fund and its shareholders will be absorbing duplicate levels of fees with respect to investments in other funds, including ETFs. Such fees will not, however, be counted towards the Fund's expense cap.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become

**ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT STRATEGIES AND RISKS
(continued)**

volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

To the extent the Fund invests directly in A-shares, the Fund will invest in securities denominated in RMB and the income received by the Fund in respect of such investments will be in RMB. In such circumstances, changes in currency exchange rates may negatively impact the Fund's returns. The value of the RMB may be subject to a high degree of fluctuation due to changes in interest rates, the effects of monetary policies issued by the PRC, the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. Therefore, the Fund's exposure to RMB may result in reduced returns to the Fund. The Fund does not expect to hedge its currency risk. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and RMB and, as noted below, will bear the risk of any inability to convert the RMB.

In addition, various PRC companies derive their revenues in RMB but have requirements for foreign currency, including for the import of materials, debt service on foreign currency denominated debt, purchases of imported equipment and payment of any cash dividends declared. The existing PRC foreign exchange regulations have significantly reduced government foreign exchange controls for certain transactions, including trade and service related foreign exchange transactions and payment of dividends. However, it is impossible to predict whether the PRC government will continue its existing foreign exchange policy and when the PRC government will allow free conversion of the RMB to foreign currency. Certain foreign exchange transactions, including principal payments in respect of foreign currency-denominated obligations, currently continue to be subject to significant foreign exchange controls and require the approval of SAFE. Since 1994, the conversion of RMB into U.S. dollars has been based on rates set by the People's Bank of China, which are set daily based on the previous day's PRC interbank foreign exchange market rate. It is not possible to predict nor give any assurance of any future stability of the RMB to U.S. dollar exchange rate. Fluctuations in exchange rates may adversely affect the Fund's NAV. Furthermore, because dividends are declared in U.S. dollars and underlying payments are made in RMB, fluctuations in exchange rates may adversely affect dividends paid by the Fund.

In addition, the Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. The issuers of certain depositary receipts are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities.

Risk of Investing in the Financial Services Sector. The financial services sector includes companies involved in such activities as banking, commercial and consumer finance, investment banking, brokerage, asset management, custody and insurance. Because as currently constituted the Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector in certain

countries is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework, which may have an impact on the issuers included in the Index. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates. The success of these companies is affected by supply and demand both for their specific product or service and for industrial sector products in general. The products of manufacturing companies may face product obsolescence

due to rapid technological developments and frequent new product introduction. In addition, the industrials sector may also be adversely affected by changes or trends in commodity prices, which may be influenced or characterized by unpredictable factors.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in Medium-Capitalization Companies. The Fund may invest in medium-capitalization companies and, therefore will be subject to certain risks associated with medium-capitalization companies. These companies are often subject to less analyst coverage and may be in early and less predictable periods of their corporate existences, with little or no record of profitability. In addition, these companies often have greater price volatility, lower trading volume and less liquidity than larger more established companies. These companies tend to have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of larger companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. For example, an adverse event, such as an unfavorable earnings report, may result in a decline in the value of equity securities of an issuer held by the Fund; the price of the equity securities of an issuer may be particularly sensitive to general movements in the securities markets; or a drop in the securities markets may depress the price of most or all of the equities securities held by the Fund. In addition, the equity securities of an issuer in the Fund's portfolio may decline in price if the issuer fails to make anticipated dividend payments. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. Overall securities values could decline generally or could underperform other investments. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units. The Fund's return may also deviate significantly from the return of the Index because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Index. The Fund may not be fully invested at times, either as a result of cash flows into the Fund or reserves of cash held by the Fund to meet redemptions and pay expenses. To the extent the Fund is unable to enter into swaps or other derivatives linked to the performance of the Index or securities comprising the Index, it may enter into swaps or other derivatives linked to the performance of other funds that seek to track the performance of the Index. These funds may trade at a premium or discount to NAV, which may result in additional tracking error for the Fund.

In addition, the Fund may not be able to invest in certain securities included in the Index, or invest in them in the exact proportions they represent of the Index, due to legal restrictions or limitations imposed by the Chinese government or a lack of liquidity on stock exchanges in which such securities trade. Moreover, the Fund may be delayed in purchasing or selling securities included in the Index. Any issues the Fund encounters with regard to currency convertibility (including the cost of borrowing funds, if any) and repatriation may also increase the index tracking risk.

Relevant PRC laws and regulations may limit the ability of the Adviser and/or potential swap counterparties to acquire A-shares in certain PRC issuers from time to time. In addition, a potential swap counterparty may not be able to acquire A-shares to hedge the swaps in which the Fund invests. In such cases, this may restrict the Fund's ability to invest in certain A-shares and also may restrict the issuance, and therefore the purchase, of swaps linked to these A-shares by the Fund. This may occur in a number of circumstances, such as (i) where the QFII or RQFII holds in the aggregate 10% of the total share capital of a listed PRC issuer (regardless of the fact that the QFII or RQFII may hold its interest on behalf of a number of different ultimate clients),

**ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT STRATEGIES AND RISKS
(continued)**

and (ii) where the aggregated holdings in A-shares of all QFIIs or RQFIIs (whether or not connected in any way to the Fund) already equal 30% of the total share capital of a listed PRC issuer. In the event that these limits are exceeded, the relevant QFIIs or RQFIIs will be required to dispose of the A-shares in order to comply with the relevant requirements and, in respect of (ii), each QFII or RQFII will dispose of the relevant A-shares on a last in first out basis. As a consequence, in such circumstances, the Fund may need to adopt a representative sampling strategy in order to achieve its investment objective which may cause increased tracking error. Furthermore, the tracking error of the Fund may be increased by the overall costs of maintaining the swaps. As a result of such costs the value of the swaps may differ from the price of the A-shares to which such swaps are linked, leading to an increased tracking error.

The Fund is expected to fair value certain of the foreign securities it holds. See Shareholder Information Determination of NAV. To the extent the Fund calculates its NAV based on fair value prices and the value of the Index is based on securities closing prices on local foreign markets (*i.e.*, the value of the Index is not based on fair value prices), the Fund's ability to track the Index may be adversely affected. The need to comply with the tax diversification and other requirements of the Internal Revenue Code of 1986, as amended (Internal Revenue Code) may also impact the Fund's ability to replicate the performance of the Index. In addition, to the extent the Fund utilizes swaps and other derivative instruments, which it currently intends to use as its principal means to replicate the Index, its return may not correlate as well with the Index as would be the case if the Fund purchased all the securities in the Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Replication Management Risk. Unlike many investment companies, the Fund is not actively managed. Therefore, unless a specific security is removed from the Index, the Fund generally would not sell a security because the security's issuer is in financial trouble. If a specific security is removed from the Index, the Fund may be forced to sell such security at an inopportune time or for prices other than at current market values. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. The Fund's Index may not contain the appropriate or a diversified mix of securities for any particular economic cycle. The timing of changes in the securities of the Fund's portfolio in seeking to replicate the Index could have a negative effect on the Fund. Unlike with an actively managed fund, the Adviser does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. The NAV of the Shares will fluctuate with changes in the market value of the Fund's securities holdings. The market prices of Shares will fluctuate in accordance with changes in NAV and supply and demand on NYSE Arca. The Adviser cannot predict whether Shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the securities of the Index trading individually or in the aggregate at any point in time. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most other ETFs, the Fund expects to effect all of its creations and redemptions for cash, rather than in-kind securities. As a result, an investment in the Fund may be less tax-efficient than an investment in a more conventional ETF. Other ETFs generally are able to make in-kind redemptions and avoid realizing gains in connection with transactions designed to meet redemption requests. Because the Fund currently intends to effect all

redemptions for cash, rather than in-kind distributions, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds, which involves transaction costs. If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized if it were to distribute portfolio securities in-kind or to recognize such gain sooner than would otherwise be required. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF.

Non-Diversified Risk. The Fund is a separate investment portfolio of Market Vectors ETF Trust (the Trust), which is an open-end investment company registered under the 1940 Act. The Fund is classified as a non-diversified investment company under the 1940 Act. As a result, the Fund is subject to the risk that it will be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the

gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent that the Index concentrates in a particular sector or sectors or industry or group of industries. The securities of many or all of the companies in the same sector or industry may decline in value due to developments adversely affecting such sector or industry. By concentrating its assets in a particular sector or sectors or industry or group of industries, the Fund is subject to the risk that economic, political or other conditions that have a negative effect on that sector or industry will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries. Based on the current composition of the Index, the Fund's assets are concentrated in the financial services sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

ADDITIONAL RISKS

Leverage Risk. To the extent that the Fund borrows money or utilizes certain derivatives, it will be leveraged. Leveraging generally exaggerates the effect on NAV of any increase or decrease in the market value of the Fund's portfolio securities.

No Guarantee of Active Trading Market. While the Fund's Shares are listed on NYSE Arca, there can be no assurance that active trading markets for the Shares will be maintained. Van Eck Securities Corporation, the distributor of the Shares (the Distributor), does not maintain a secondary market in the Shares.

Trading Issues. Trading in Shares on NYSE Arca may be halted due to market conditions or for reasons that, in the view of NYSE Arca, make trading in Shares inadvisable. In addition, trading in Shares on NYSE Arca is subject to trading halts caused by extraordinary market volatility pursuant to NYSE Arca's circuit breaker rules. There can be no assurance that the requirements of NYSE Arca necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

PORTFOLIO HOLDINGS

A description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's SAI.

MANAGEMENT OF THE FUND

Board of Trustees. The Board of Trustees of the Trust has responsibility for the general oversight of the management of the Fund, including general supervision of the Adviser and other service providers, but is not involved in the day-to-day management of the Trust. A list of the Trustees and the Trust officers, and their present positions and principal occupations, is provided in the Fund's SAI.

Investment Adviser. Under the terms of an investment management agreement between the Trust and Van Eck Associates Corporation with respect to the Fund (the Investment Management Agreement), Van Eck Associates Corporation serves as the adviser to the Fund and, subject to the supervision of the Board of Trustees, will be responsible for the day-to-day investment management of the Fund. As of March 31, 2013, the Adviser managed approximately \$35.0 billion in assets. The Adviser has been an investment adviser since 1955 and also acts as adviser or sub-adviser to other mutual funds, exchange-traded funds, other pooled investment vehicles and separate accounts. The Adviser's principal business address is 335 Madison Avenue, 19th Floor, New York, New York 10017.

A discussion regarding the Board of Trustees' approval of the Investment Management Agreement is available in the Trust's semi-annual report for the period ended June 30, 2012.

For the services provided to the Fund under the Investment Management Agreement, the Fund will pay the Adviser monthly fees based on a percentage of the Fund's average daily net assets at the annual rate of 0.50%. From time to time, the Adviser may waive all or a portion of its fee. Until at least May 1, 2014, the Adviser has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.72% of its average daily net assets per year. Offering costs excluded from the expense cap are: (a) legal fees pertaining to the Fund's Shares offered for sale; (b) SEC and state registration fees; and (c) initial fees paid for Shares of the Fund to be listed on an exchange.

The Fund is responsible for all of its expenses, including the investment advisory fees, costs of transfer agency, custody, legal, audit and other services, interest, taxes, any distribution fees or expenses, offering fees or expenses and extraordinary expenses.

Manager of Managers Structure. The Adviser and the Trust may rely on an exemptive order (the Order) from the SEC that permits the Adviser to enter into investment sub-advisory agreements with unaffiliated sub-advisers without obtaining further shareholder approval. The Adviser, subject to the review and approval of the Board of Trustees, may select sub-advisers for the Fund and supervise, monitor and evaluate the performance of each sub-adviser.

**ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT STRATEGIES AND RISKS
(continued)**

The Order also permits the Adviser, subject to the approval of the Board of Trustees, to replace sub-advisers and amend investment sub-advisory agreements, including fees, without shareholder approval whenever the Adviser and the Board of Trustees believe such action will benefit the Fund and its shareholders. The Adviser thus would have the responsibility (subject to the oversight of the Board of Trustees) to recommend the hiring and replacement of sub-advisers as well as the discretion to terminate any sub-adviser and reallocate the Fund's assets for management among any other sub-adviser(s) and itself. This means that the Adviser would be able to reduce the sub-advisory fees and retain a larger portion of the management fee, or increase the sub-advisory fees and retain a smaller portion of the management fee. The Adviser would compensate each sub-adviser out of its management fee.

Administrator, Custodian and Transfer Agent. Van Eck Associates Corporation is the administrator for the Fund (the Administrator), and The Bank of New York Mellon is the custodian of the Fund's assets and provides transfer agency and fund accounting services to the Fund. The Administrator is responsible for certain clerical, recordkeeping and/or bookkeeping services which are provided pursuant to the Investment Management Agreement.

Distributor. Van Eck Securities Corporation is the distributor of the Shares. The Distributor will not distribute Shares in less than Creation Units, and does not maintain a secondary market in the Shares. As noted in the section entitled Shareholder Information Buying and Selling Exchange-Traded Shares, the Shares are traded in the secondary market.

PORTFOLIO MANAGERS

The portfolio managers who currently share joint responsibility for the day-to-day management of the Fund's portfolio are Hao-Hung (Peter) Liao and George Cao. Mr. Liao has been employed by the Adviser since the summer of 2004 as an Analyst. Mr. Liao also serves as a portfolio manager for certain other investment companies advised by the Adviser. Mr. Cao has been employed by the Adviser since December 2007 as a Senior Analyst. Prior to joining the Adviser, he served as Controller of Operations Administrations Division and Corporate Safety (September 2006 December 2007) for United Airlines. See the Fund's SAI for additional information about the portfolio managers compensation, other accounts managed by the portfolio managers and their respective ownership of Shares.

SHAREHOLDER INFORMATION

DETERMINATION OF NAV

The NAV per Share for the Fund is computed by dividing the value of the net assets of the Fund (*i.e.*, the value of its total assets less total liabilities) by the total number of Shares outstanding. Expenses and fees, including the management fee, are accrued daily and taken into account for purposes of determining NAV. The NAV of the Fund is determined each business day as of the close of trading (ordinarily 4:00 p.m. Eastern time) on the New York Stock Exchange (NYSE). Any assets or liabilities denominated in currencies other than the U.S. dollar are converted into U.S. dollars at the current market rates on the date of valuation as quoted by one or more sources.

The values of the Fund's portfolio securities are based on the securities' closing prices on their local principal markets, where available. Due to the time difference between the United States and certain countries in which the Fund invests, securities on these exchanges may not trade at times when Shares of the Fund will trade. In the absence of a last reported sales price, or if no sales were reported, and for other assets for which market quotes are not readily available, values may be based on quotes obtained from a quotation reporting system, established market makers or by an outside independent pricing service. Prices obtained by an outside independent pricing service may use information provided by market makers or estimates of market values obtained from yield data related to investments or securities with similar characteristics and may use a computerized grid matrix of securities and its evaluations in determining what it believes is the fair value of the portfolio securities. If a market quotation for a security is not readily available or the Adviser believes it does not otherwise accurately reflect the market value of the security at the time the Fund calculates its NAV, the security will be fair valued by the Adviser in accordance with the Trust's valuation policies and procedures approved by the Board of Trustees. The Fund may also use fair value pricing in a variety of circumstances, including but not limited to, situations where the value of a security in the Fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded (such as a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. In addition, the Fund currently expects that it will fair value certain of the foreign equity securities held by the Fund each day the Fund calculates its NAV. Accordingly, the Fund's NAV is expected to reflect certain portfolio securities fair values rather than their market prices. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate the Fund's NAV and the prices used by the Index. This may adversely affect the Fund's ability to track the Index. With respect to securities traded in foreign markets, the value of the Fund's portfolio securities may change on days when you will not be able to purchase or sell your Shares.

BUYING AND SELLING EXCHANGE-TRADED SHARES

The Shares of the Fund are listed on NYSE Arca. If you buy or sell Shares in the secondary market, you will incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. In times of severe market disruption or low trading volume in the Fund's Shares, this spread can increase significantly. It is anticipated that the Shares will trade in the secondary market at prices that may differ to varying degrees from the NAV of the Shares. During periods of disruptions to creations and redemptions or the existence of extreme market volatility, the market prices of Shares are more likely to differ significantly from the Shares' NAV.

The Depository Trust Company (DTC) serves as securities depository for the Shares. (The Shares may be held only in book-entry form; stock certificates will not be issued.) DTC, or its nominee, is the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or its participants (described below). Beneficial owners of Shares are not entitled to have Shares registered in their names, will not receive or be

entitled to receive physical delivery of certificates in definitive form and are not considered the registered holder thereof. Accordingly, to exercise any rights of a holder of Shares, each beneficial owner must rely on the procedures of: (i) DTC; (ii) DTC Participants, *i.e.*, securities brokers and dealers, banks, trust companies, clearing corporations and certain other organizations, some of whom (and/or their representatives) own DTC; and (iii) Indirect Participants, *i.e.*, brokers, dealers, banks and trust companies that clear through or maintain a custodial relationship with a DTC Participant, either directly or indirectly, through which such beneficial owner holds its interests. The Trust understands that under existing industry practice, in the event the Trust requests any action of holders of Shares, or a beneficial owner desires to take any action that DTC, as the record owner of all outstanding Shares, is entitled to take, DTC would authorize the DTC Participants to take such action and that the DTC Participants would authorize the Indirect Participants and beneficial owners acting through such DTC Participants to take such action and would otherwise act upon the instructions of beneficial owners owning through them. As described above, the Trust recognizes DTC or its nominee as the owner of all Shares for all purposes. For more information, see the section entitled "Book Entry Only System" in the Fund's SAI.

The NYSE Arca is open for trading Monday through Friday and is closed on weekends and the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. Because non-U.S. exchanges may be open on days when the Fund does not price its Shares, the value of

SHAREHOLDER INFORMATION (continued)

the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

Market Timing and Related Matters. The Fund imposes no restrictions on the frequency of purchases and redemptions. The Board of Trustees considered the nature of the Fund (*i.e.*, a fund whose shares are expected to trade intra-day), that the Adviser monitors the trading activity of authorized participants for patterns of abusive trading, that the Fund reserves the right to reject orders that may be disruptive to the management of or otherwise not in the Fund's best interests, and that the Fund fair values certain of its securities. Given this structure, the Board of Trustees determined that it is not necessary to impose restrictions on the frequency of purchases and redemptions for the Fund at the present time.

DISTRIBUTIONS

Net Investment Income and Capital Gains. As a shareholder of the Fund, you are entitled to your share of the Fund's distributions of net investment income and net realized capital gains on its investments. The Fund pays out substantially all of its net earnings to its shareholders as distributions.

The Fund typically earns income dividends from stocks and interest from debt securities. These amounts, net of expenses, are typically passed along to Fund shareholders as dividends from net investment income. The Fund realizes capital gains or losses whenever it sells securities. Net capital gains are distributed to shareholders as capital gain distributions.

Net investment income, if any, and net capital gains, if any, are typically distributed to shareholders at least annually. Dividends may be declared and paid more frequently to improve index tracking or to comply with the distribution requirements of the Internal Revenue Code. In addition, the Fund may determine to distribute at least annually amounts representing the full dividend yield net of expenses on the underlying investment securities, as if the Fund owned the underlying investment securities for the entire dividend period, in which case some portion of each distribution may result in a return of capital, which, for tax purposes, is treated as a return of your investment in Shares. Record shareholders will be notified regarding the portion of the distribution which represents a return of capital.

Distributions in cash may be reinvested automatically in additional Shares of the Fund only if the broker through which you purchased Shares makes such option available.

TAX INFORMATION

As with any investment, you should consider how your Fund investment will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in the Fund, including the possible application of foreign, state and local taxes. Unless your investment in the Fund is through a tax-exempt entity or tax-deferred retirement account, such as a 401(k) plan, you need to be aware of the possible tax consequences when: (i) the Fund makes distributions, (ii) you sell Shares in the secondary market or (iii) you create or redeem Creation Units.

Taxes on Distributions. As noted above, the Fund expects to distribute net investment income at least annually, and any net realized long-term or short-term capital gains annually. The Fund may also pay a special distribution at any time to comply with U.S. federal tax requirements.

In general, your distributions are subject to U.S. federal income tax when they are paid, whether you take them in cash or reinvest them in the Fund. Distributions of net investment income, including any net short-term gains, if any, are

generally taxable as ordinary income. Whether distributions of capital gains represent long-term or short-term capital gains is determined by how long the Fund owned the investments that generated them, rather than how long you have owned your Shares. Distributions of net short-term capital gains in excess of net long term capital losses, if any, are generally taxable as ordinary income. Distributions of net long-term capital gains in excess of net short-term capital losses, if any, that are reported as capital gain dividends are generally taxable as long-term capital gains. After 2012, long-term capital gains of non-corporate shareholders are generally taxable at a maximum rate of 15% or 20%, depending on whether the shareholder's income exceeds certain threshold amounts.

The Fund may receive dividends, the distribution of which the Fund may designate as qualified dividends. In the event that the Fund receives such a dividend and designates the distribution of such dividend as a qualified dividend, the dividend may be taxed at the maximum capital gains rates, provided holding period and other requirements are met at both the shareholder and the Fund level.

Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of your investment to the extent of your basis in the Shares, and generally as capital gain thereafter. A return of capital, which for tax purposes is treated as a return of your investment, reduces your basis in Shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition of Shares. A distribution will reduce the Fund's NAV per Share and may be taxable to you as ordinary income or capital gain even though, from an economic standpoint, the distribution may constitute a return of capital.

Special tax rules may change the normal treatment of gains and losses recognized by the Fund if the Fund makes certain investments such as investments in structured notes, swaps, options and futures transactions. Those special tax rules can negatively affect the character, timing and amount of income earned by the Fund (*e.g.*, by causing amounts that would be capital gain to be taxed as ordinary income or to be taken into income earlier than would otherwise be necessary). The Fund intends to invest in swaps and other derivative instruments that are linked to the performance of A-shares. The U.S. tax treatment of such investments may generally be less efficient than a direct investment in A-shares. Furthermore, the Fund may be required to periodically adjust its positions in these swaps or derivatives to comply with certain regulatory requirements which may further cause these investments to be less efficient than a direct investment in A-shares. In addition, because the application of these special rules may be uncertain, it is possible that the manner in which they are applied by the Fund may be determined to be incorrect. In that event, the Fund may be found to have failed to maintain its qualification as a RIC or to be subject to additional U.S. tax liability.

The Fund may make investments, both directly and through swaps or other derivative positions, in companies classified as PFICs for U.S. federal income tax purposes. Investments in PFICs are subject to special tax rules which may result in adverse tax consequences to the Fund and its shareholders. The Fund generally intends to elect to mark to market these investments at the end of each taxable year. By making this election, the Fund will recognize as ordinary income any increase in the value of such shares as of the close of the taxable year over their adjusted basis and as ordinary loss any decrease in such investment (but only to the extent of prior income from such investment under the mark to market rules). Gains realized with respect to a disposition of a PFIC that the Fund has elected to mark to market will be ordinary income. By making the mark to market election, the Fund may recognize income in excess of the distributions that it receives from its investments. Accordingly, the Fund may need to borrow money or dispose of some of its investments in order to meet its distribution requirements. If the Fund does not make the mark to market election with respect to an investment in a PFIC, the Fund could become subject to U.S. federal income tax with respect to certain distributions from, and gain on the dispositions of, the PFIC which cannot be avoided by distributing such amounts to the Fund's shareholders.

Dividends, interest and gains from non-U.S. investments of the Fund may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may, in some cases, reduce or eliminate such taxes.

If more than 50% of the Fund's total assets at the end of its taxable year consist of foreign securities, the Fund may elect to pass through to its investors certain foreign income taxes paid by the Fund, with the result that each investor will (i) include in gross income, as an additional dividend, even though not actually received, the investor's pro rata share of the Fund's foreign income taxes, and (ii) either deduct (in calculating U.S. taxable income) or credit (in calculating U.S. federal income), subject to certain holding period and other limitations, the investor's pro rata share of the Fund's foreign income taxes. It is expected that more than 50% of the Fund's assets will consist of foreign securities.

Backup Withholding. The Fund may be required to withhold a percentage of your distributions and proceeds if you have not provided a taxpayer identification number or social security number or otherwise established a basis for exemption from backup withholding. The backup withholding rate for individuals is currently 28%. This is not an additional tax and may be refunded, or credited against your U.S. federal income tax liability, provided certain required information is furnished to the Internal Revenue Service.

Taxes on the Sale or Cash Redemption of Exchange Listed Shares. Currently, any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as a short term capital gain or loss if held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such Shares. The ability to deduct capital losses may be limited. A redemption of a shareholder's Fund Shares for cash is normally treated as a sale for tax purposes.

Taxes on In-Kind Creations and In-Kind Redemptions of Creation Units. To the extent a person exchanges securities or securities and cash for Creation Units, such person generally will recognize a gain or loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of exchange and the sum of the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for such Creation Units. A person who exchanges Creation Units for securities or securities and cash will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received and the amount of any cash received for such Creation Units. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for Creation Units cannot be deducted currently under the rules governing wash sales, or on the basis that there has been no significant change in economic position. Persons exchanging primarily securities for Creation Units or redeeming Creation Units should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible and the tax treatment of any creation or redemption transaction.

SHAREHOLDER INFORMATION (continued)

Under current U.S. federal income tax laws, any capital gain or loss realized upon a redemption (or creation) of Creation Units is generally treated as long-term capital gain or loss if the Shares (or securities surrendered) have been held for more than one year and as a short-term capital gain or loss if the Shares (or securities surrendered) have been held for one year or less.

If you create or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you created or sold and at what price.

Medicare Tax. For taxable years beginning after December 31, 2012, an additional 3.8% Medicare tax will be imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Fund Shares) of U.S. individuals, estates and trusts to the extent that such person's modified adjusted gross income (in the case of an individual) or adjusted gross income (in the case of an estate or trust) exceeds certain threshold amounts.

Non-U.S. Shareholders. If you are not a citizen or resident alien of the United States, the Fund's ordinary income dividends (which include distributions of net short-term capital gains) will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or unless such income is effectively connected with a U.S. trade or business.

Effective January 1, 2014, each Fund will be required to withhold U.S. tax (at a 30% rate) on payments of dividends and (effective January 1, 2017) redemption proceeds made to certain non-U.S. entities that fail to comply (or be deemed compliant) with extensive new reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. Shareholders may be requested to provide additional information to a Fund to enable the Fund to determine whether withholding is required.

Non-U.S. shareholders are advised to consult their tax advisors with respect to the particular tax consequences to them of an investment in the Funds, including the possible applicability of the U.S. estate tax.

The foregoing discussion summarizes some of the consequences under current U.S. federal income tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your own tax advisor about the potential tax consequences of an investment in the Fund under all applicable tax laws.

INDEX PROVIDER

The Index is published by China Securities Index Co., Ltd. (the Index Provider). The Index Provider does not sponsor, endorse, or promote the Fund and bears no liability with respect to the Fund or any security.

The Index is a modified free-float market capitalization weighted index comprised of the largest and most liquid stocks in the Chinese A-share market. Constituent stocks for the Index must have been listed for more than three months (unless the stock's average daily A-share market capitalization since its initial listing ranks among the top 30 of all A-shares) and must not be experiencing what the Index Provider believes to be obvious abnormal fluctuations or market manipulation.

As of December 31, 2012, the Index included 300 securities of companies with a market capitalization range of \$890 million to \$264.8 billion and a weighted average market capitalization of \$2.6 billion. These amounts are subject to change.

When selecting constituent stocks for the Index, the Index Provider: (1) calculates the daily average trading value and daily average total market capitalization during the most recent year (or in case of new issue, during the time since its initial listing) for all the stocks in the stock universe; (2) ranks the stocks in the stock universe in descending order according to their average daily trading values, and excludes the bottom 50%; and (3) ranks the remaining stocks in descending order according to their average daily market capitalization and selects those which rank in the top 300 according to their average daily market capitalization as constituent stocks of the Index.

The weighting of a company in the Index is intended to be a reflection of the current importance of that company in the market as a whole. Stocks are selected and weighted according to market capitalization. A company is heavily weighted in the Index if it has a relatively larger free-float market capitalization than the rest of the constituents in the Index. The constituents of the Index are frequently reviewed by the Index Provider to ensure that the Index continues to reflect the state and structure of the underlying market it measures. The Index is calculated in real time and is published every six seconds in RMB. The composition of the Index is reviewed semi-annually every January and July.

LICENSE AGREEMENT AND DISCLAIMERS

The Adviser has entered into a licensing agreement with the Index Provider to use the Index. The Fund is entitled to use the Index pursuant to a sub-licensing arrangement with the Adviser.

The Fund is neither sponsored nor promoted, distributed or in any other manner supported by the Index Provider. The Index is compiled and calculated by the Index Provider. The Index Provider will apply all necessary means to ensure the accuracy of the Index. However, neither the Index Provider nor the Shanghai Stock Exchange nor the Shenzhen Stock Exchange shall be liable (whether in negligence or otherwise) to any person for any error in the Index and neither the Index Provider nor the Shanghai Stock Exchange nor the Shenzhen Stock Exchange shall be under any obligation to advise any person of any error therein. All copyright in Index values and constituent list vests in the Index Provider. Neither the publication of the Index by the Index Provider nor the granting of a license regarding the Index as well as the Index Trademark for the utilization in connection with the Fund, which derived from the Index, represents a recommendation by the Index Provider for a capital investment or contains in any manner a warranty or opinion by the Index Provider with respect to the attractiveness on an investment in the Fund.

FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the Fund's financial performance since the Fund's inception. Certain information reflects financial results for a single Fund share. The total returns in the table represent that rate that an investor would have earned (or lost) on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information has been audited by Ernst & Young LLP, the Fund's independent registered public accounting firm, whose report, along with the Fund's financial statements, are included in the Fund's Annual Report, which is available upon request.

FINANCIAL HIGHLIGHTS (continued)**For a share outstanding throughout the period:**

	For the Year Ended December 31,		For the Period October 13, 2010(a) Through December 31, 2010
	2012	2011	
Net asset value, beginning of period	\$ 30.28	\$ 38.81	\$ 40.75
Income from investment operations:			
Net investment loss	(e)	(0.27)	(0.07)
Net realized and unrealized gain (loss) on investments	2.89	(8.26)	(0.77)
Total from investment operations	2.89	(8.53)	(0.84)
Less:			
Dividends from net investment income			(1.08)
Return of capital			(0.02)
Total dividends			(1.10)
Net asset value, end of period	\$ 33.17	\$ 30.28	\$ 38.81
Total return (b)	9.54 %	(21.98)%	(2.00)%(c)

Ratios/Supplemental Data

Net assets, end of period (000 s)	\$ 33,169	\$ 15,139	\$ 19,404
Ratio of gross expenses to average net assets	2.21 %	1.71 %	1.11 %(d)
Ratio of net expenses to average net assets	0.72 %	0.72 %	0.72 %(d)
Ratio of net expenses, excluding interest expense, to average net assets	0.72 %	0.72 %	0.72 %(d)
Ratio of net investment loss to average net assets	(0.69)%	(0.71)%	(0.70)%(d)
Portfolio turnover rate	0 %	0 %	0 %(c)

(a) Commencement of operations

- (b) Total return is calculated assuming an initial investment made at the net asset value at the beginning of the period, reinvestment of any dividends and distributions at net asset value on the dividend/distributions payment date and a redemption on the last day of the period. The return does not reflect the deduction of taxes that a shareholder would pay on Fund dividends/distributions or the redemption of Fund shares.
 - (c) Not annualized
 - (d) Annualized
 - (e) Amount represents less than \$0.005 per share
-

PREMIUM/DISCOUNT INFORMATION

Information regarding how often the Shares of the Fund traded on NYSE Arca at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund during the past four calendar quarters, as applicable, can be found at www.marketvectorsetfs.com.

GENERAL INFORMATION

CONTINUOUS OFFERING

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Trust on an ongoing basis, a distribution, as such term is used in the Securities Act, may occur at any point. Broker dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker dealers who are not underwriters but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an unsold allotment within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on NYSE Arca is satisfied by the fact that the prospectus is available at NYSE Arca upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

OTHER INFORMATION

The Trust was organized as a Delaware statutory trust on March 15, 2001. Its Declaration of Trust currently permits the Trust to issue an unlimited number of Shares of beneficial interest. If shareholders are required to vote on any matters, each Share outstanding would be entitled to one vote. Annual meetings of shareholders will not be held except as required by the 1940 Act and other applicable law. See the Fund's SAI for more information concerning the Trust's form of organization. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of the Fund. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into an agreement with the Fund.

Dechert LLP serves as counsel to the Trust, including the Fund. Ernst & Young LLP serves as the Trust's independent registered public accounting firm and will audit the Fund's financial statements annually.

ADDITIONAL INFORMATION

This Prospectus does not contain all the information included in the Registration Statement filed with the SEC with respect to the Fund's Shares. Information about the Fund can be reviewed and copied at the SEC's Public Reference Room and information on the operation of the Public Reference Room may be obtained by calling the SEC at 1.202.551.8090. The Fund's Registration Statement, including this Prospectus, the Fund's SAI and the exhibits may be examined at the offices of the SEC (100 F Street, NE, Washington, DC 20549) or on the EDGAR database at the SEC's website (<http://www.sec.gov>), and copies may be obtained, after paying a duplicating fee, by electronic request at the following email address: publicinfo@sec.gov, or by writing the SEC's Public Reference Section, Washington, DC 20549-1520. These documents and other information concerning the Trust also may be inspected at the offices of NYSE Arca (20 Broad Street, New York, New York 10005).

The SAI for the Fund, which has been filed with the SEC, provides more information about the Fund. The SAI for the Fund is incorporated herein by reference and is legally part of this Prospectus. Additional information about the Fund's investments is available in the Fund's annual and semi-annual reports to shareholders. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year. The SAI and the Fund's annual and semi-annual reports may be obtained without charge by writing to the Fund at Van Eck Securities Corporation, the Fund's distributor, at 335 Madison Avenue, New York, New York 10017 or by calling the distributor at the following number: Investor Information: 1.888.MKT.VCTR (658-8287).

Shareholder inquiries may be directed to the Fund in writing to 335 Madison Avenue, 19th Floor, New York, New York 10017 or by calling 1.888.MKT.VCTR (658-8287).

The Fund's SAI will be available at www.marketvectorsetfs.com.
