MARKET VECTORS CHINA ETF

Ticker: PEK®
 Principal U.S. Listing Exchange: NYSE Arca, Inc.
SUMMARY PROSPECTUS
 MAY 1, 2013, as revised on June 10, 2013

PEKSUM

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund online at <http://www.vaneck.com/library/etfs/>. You can also get this information at no cost by calling 888.MKT.VCTR, or by sending an email request to info@vaneck.com. The Fund's prospectus and statement of additional information, each dated May 1, 2013, as revised on June 10, 2013, are incorporated by reference into this summary prospectus.

INVESTMENT OBJECTIVE

Market Vectors China ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the CSI 300 Index (the Index).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

Shareholder Fees (*fees paid directly from your investment*) None

Annual Fund Operating Expenses

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50 %
Other Expenses	1.71 %
Total Annual Fund Operating Expenses ^(a)	2.21 %
Fee Waivers and Expense Reimbursement ^(a)	1.49 %
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(a)	0.72 %

(a) Van Eck Associates Corporation (the Adviser) has agreed to

waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.72% of the Fund's average daily net assets per year until at least May 1, 2014. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

EXPENSE EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$ 74
3	\$ 547
5	\$ 1,048
10	\$ 2,427

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example,

may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index and/or in investments that have economic characteristics that are substantially identical to the economic characteristics of the securities that comprise its benchmark index. The Index is comprised of the largest and most liquid stocks in the Chinese A-share market. As of December 31, 2012, the Index included 300 securities of companies with a market capitalization range of between approximately \$890 million and \$264.8 billion and a weighted average market capitalization of \$2.6 billion. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. The Adviser expects that, over time, the correlation between the Fund's performance before fees and expenses and that of the Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Index is comprised of China A-shares (A-shares). The Index is a modified free-float market capitalization weighted index composed of the largest and most liquid stocks in the Chinese A-share market. Constituent stocks for the Index must have been listed for more than three months (unless the stock's average daily A-share market capitalization since its initial listing ranks among the top 30 of all A-shares) and must not be experiencing obvious abnormal fluctuations or market manipulation.

A-shares are issued by companies incorporated in mainland China. A-shares are traded in renminbi (RMB) on the Shenzhen and Shanghai Stock Exchanges. The A-share market in the People's Republic of China (China or the PRC) is made available to domestic PRC investors and certain foreign investors, including principally those who have been approved as a Qualified Foreign Institutional Investor (QFII) and have obtained a QFII license or are appropriately licensed Hong Kong subsidiaries of certain domestic PRC financial institutions that have been approved as a Renminbi Qualified Foreign Institutional Investor (RQFII) and have obtained a RQFII license. A QFII or RQFII license may be obtained by application to the China Securities Regulatory Commission (CSRC). After obtaining a QFII or RQFII license, the QFII or RQFII would also apply to the China's State Administration of Foreign Exchange (SAFE) for a specific aggregate dollar amount investment quota (the A-share Quota) in which the QFII or RQFII can invest in A-shares. Investment companies are not currently within the types of entities that are eligible for a QFII or RQFII license.

In seeking to replicate the Index, the Fund will invest in swaps and other types of derivative instruments that have economic characteristics that are substantially identical to the economic characteristics of A-shares, including swaps on the Index and/or the A-shares which comprise the Index. The Adviser may obtain a QFII license and an A-share Quota and, subject to liquidity and repatriation issues, the Adviser, on behalf of the Fund, may invest in A-shares and other permitted China securities listed on the Shenzhen and Shanghai Stock Exchanges up to the specified A-share Quota. The Fund also may retain one or more sub-advisers that maintain RQFII licenses which allow such sub-advisers to invest in A-shares and not be subject to repatriation and liquidity constraints. See Additional Information About the Fund's Investment Strategies and Risks Risks of Investing in the Fund Investment and Repatriation Restrictions. Because the Fund does not satisfy the criteria to qualify as a QFII or RQFII itself, in order for the Fund to invest directly in A-shares, it must do so via the Adviser's or a sub-adviser's A-share Quota.

The Fund may also invest in swaps on funds that seek to replicate the performance of the Index or directly in securities of such funds. The notional values of these swaps and other derivative instruments will count towards the Fund's 80% investment policy and cash and cash equivalents related to the swaps and other derivative instruments will not be counted towards the calculation of total assets. Assets not invested in A-shares, swaps and other derivatives

will be invested primarily in money market instruments.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Index concentrates in an industry or group of industries. As of December 31, 2012, the Index was concentrated in the financial services sector and each of the industrials and basic materials sectors represented a significant portion of the Index.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of the Fund's Investment Strategy. The Index is comprised of A-shares. In seeking to replicate the Index, the Fund may gain exposure to the A-share market by investing in swaps that are linked to the performance of A-shares and may invest directly in A-shares through an A-share Quota to be obtained by the Adviser and/or through a sub-adviser's A-share Quota. The Adviser's ability to manage the Fund will depend upon the availability of A-shares and the willingness of swap counterparties to engage in swaps with the Fund linked to the performance of such A-shares. To the extent that the A-share Quota of a potential swap counterparty is reduced or eliminated due to actions by the Chinese government or as a result of transactions entered into by

the counterparty with other investors, the counterparty's ability to continue to enter into swaps or other derivative transactions with the Fund may be reduced or eliminated which could have a material adverse effect on the Fund. These risks are compounded by the fact that, at present, there are only a limited number of potential counterparties willing and able to enter into swap transactions linked to the performance of A-shares. Because the Fund would not be able to invest directly in A-shares in excess of an A-share Quota of the Adviser and/or a sub-adviser, the size of the Fund's investment in A-shares, if any, may be limited. In addition, the A-share Quota of the Adviser or a sub-adviser may be reduced or revoked by the Chinese regulators if, among other things, the Adviser or a sub-adviser fails to observe SAFE and other applicable Chinese regulations. The Fund cannot predict what would occur if the A-share Quota of the Adviser or a sub-adviser were reduced or eliminated, although such an occurrence would likely have a material adverse effect on the Fund.

If the Fund is unable to obtain sufficient exposure to the performance of the Index due to the limited availability of swaps linked to the performance of A-shares or the A-share Quota of the Adviser or a sub-adviser being reduced or revoked, the Fund could, among other things, as a defensive measure suspend creations until the Adviser determines that the requisite exposure to the Index is obtainable. During the period that creations are suspended, the Fund could trade at a significant premium or discount to its net asset value (NAV) and could experience substantial redemptions. To the extent that such events result in a termination event under the Fund's swap agreements, the risks related to the limited availability of swaps would be compounded and the Fund may be adversely affected. Alternatively, the Fund could change its investment objective and could thus track an alternative index focused on Chinese-related stocks other than A-shares or other appropriate investments.

Specific rules governing taxes on capital gains derived by QFIIs and RQFIIs from the trading of PRC securities have yet to be announced. In the absence of specific rules, the Fund's tax treatment should be governed by the general PRC tax provisions and provisions applicable to QFIIs in the event the Fund invests directly in A-shares through the Adviser's A-share Quota (if obtained). Under those provisions, the Fund is subject to a tax of 10% on any dividends, distributions and interest it receives from its investment in PRC securities if the Fund invests directly in A-shares through the Adviser's A-share Quota (if obtained) and may be subject to such a tax if the Fund invests directly in A-shares through a sub-adviser's A-share Quota. The current PRC tax laws and regulations may be revised or amended in the future, and may be applied retroactively. Any revision or amendment in tax laws and regulations may adversely affect the Fund.

In addition, the Fund's investments in swaps and other derivative instruments may be less tax-efficient than direct investment in A-shares and may be subject to special U.S. federal income tax rules that could negatively affect the Fund. Also, the Fund may be required to periodically adjust its positions in its swaps and derivatives to comply with certain regulatory requirements which may further cause these investments to be less efficient than a direct investment in A-shares. In addition, because the application of these special rules may be uncertain, it is possible that the manner in which they are applied by the Fund may be determined to be incorrect and, as a result the Fund may be found to have failed to maintain its qualification as a regulated investment company (RIC) or to be subject to additional U.S. tax liability.

Special Risk Considerations of Investing in China and A-shares. Investing in securities of Chinese companies, including A-shares, involves certain risks and considerations not typically associated with investing in securities of U.S. issuers, including, among others, (i) the small size of the market for Chinese securities and the low volume of trading, resulting in lack of liquidity and in price volatility, (ii) currency devaluations and other currency exchange rate fluctuations or blockage, (iii) the nature and extent of intervention by the Chinese government in the Chinese securities markets, whether such intervention will continue and the impact of such intervention or its discontinuation, (iv) the risk of nationalization or expropriation of assets, (v) the risk that the Chinese government may decide not to continue to support economic reform programs; (vi) limitations on the use of brokers, (vii) higher rates of inflation, (viii) greater political, economic and social uncertainty and (ix) custody risks associated with investing through a QFII.

The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, interest rates, allocation of resources and capital reinvestment, among others; the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership; and actions of the Chinese central and local government authorities continue to have a substantial effect on economic conditions in China. In addition, previously the Chinese government has from time to time taken actions that influence the prices at which certain goods may be sold, encourage companies to invest or concentrate in particular industries, induce mergers between companies in certain industries and induce private companies to publicly offer their securities to increase or continue the rate of economic growth, control the rate of inflation or otherwise regulate economic expansion. It may do so in the future as well, potentially having a significant adverse effect on economic conditions in China.

The Adviser's A-share Quota, if obtained, will be subject to repatriation restrictions that may adversely affect the Fund's ability to satisfy redemption requests. To the extent the Fund invests in A-shares through a sub-adviser with a RQFII license, such RQFIIs are currently permitted to repatriate daily and are not subject to repatriation restrictions or prior approval. However, there is no assurance that RQFIIs may not be subject to restrictions or prior approval requirements in the future, and any changes may be applied retroactively. Any additional restrictions imposed on RQFIIs may have an adverse effect on the Fund's ability to invest directly in A-shares if a sub-adviser is used.

The Chinese securities markets are emerging markets characterized by relatively low trading volume, resulting in substantially less liquidity and greater price volatility. These risks may be more pronounced for the A-share market than for Chinese securities markets generally because the A-share market is subject to greater government restrictions and control. In addition, there is less regulation and monitoring of Chinese securities markets and the activities of investors, brokers and other participants than in the United States. Accounting, auditing and financial reporting standards in China are different from U.S. standards and, therefore, disclosure of certain material information may not be made. In addition, less information may be available to the Fund and other investors than would be the case if the Fund's investments were restricted to securities of U.S. issuers. There is also generally less governmental regulation of the securities industry in China, and less enforcement of regulatory provisions relating thereto, than in the United States. Moreover, it may be more difficult to obtain a judgment in a court outside the United States.

The Chinese government strictly regulates the payment of foreign currency denominated obligations and sets monetary policy. In addition, the Chinese economy is export-driven and highly reliant on trade. Adverse changes to the economic conditions of its primary trading partners, such as the United States, Japan and South Korea, would adversely impact the Chinese economy and the Fund's investments. Moreover, the current major slowdown in other significant economies of the world, such as the United States, the European Union and certain Asian countries, may adversely affect economic growth in China. An economic downturn in China would adversely impact the Fund's investments.

Emerging markets such as China can experience high rates of inflation, deflation and currency devaluation. The value of the RMB may be subject to a high degree of fluctuation. The Fund's assets will be invested primarily in securities of Chinese issuers and the income received by the Fund will be partially in RMB. The Fund's exposure to the RMB and changes in value of the RMB versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in connection with conversions between U.S. dollars and the RMB.

Risk of Investing in Swaps. The Fund may invest in swaps on the Index or on securities comprising the Index. The Fund may also invest in swaps on other funds that track the Index or invest directly in the shares of such funds. The use of swap agreements entails certain risks, which may be different from, and possibly greater than, the risks associated with investing directly in the underlying asset for the swap agreement. Investments in swaps linked to the performance of A-shares are subject to general risks associated with A-shares and the QFII/RQFII system. It is not possible to predict the future development of the QFII/RQFII system and the CSRC may even impose restrictions on QFIIs or RQFIIs' operations. Such restrictions may adversely affect the ability of potential counterparties to enter into swaps linked to the performance of A-shares. In addition, the existence of a liquid trading market for the A-shares may depend on whether there is supply of, and demand for, such A-shares.

Because a swap is an obligation of the counterparty rather than a direct investment in A-shares, the Fund may suffer losses potentially equal to, or greater than, the full value of the swap if the counterparty fails to perform its obligations under the swap as a result of bankruptcy or otherwise. Any loss would result in a reduction in the NAV of the Fund and may impair the Fund's ability to achieve its investment objective. The counterparty risk associated with the Fund's investments is expected to be greater than most other funds because there are only a limited number of counterparties that are willing and able to enter into swaps on A-shares and the Fund expects to use swaps as the principal means to gain exposure to the Index. In fact, because there are so few potential counterparties, the Fund, subject to applicable law, may enter into swap transactions with as few as one counterparty at any time.

The swaps market is subject to extensive regulation under the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) and certain SEC and CFTC rules promulgated thereunder. It is possible that developments in the swaps market, including new and additional government regulation, could result in higher Fund costs and expenses and could adversely affect the Fund's ability, among other things, to enter into or to terminate existing swap agreements or to realize amounts to be received under such agreements.

Risk of Investing in Other Funds. The Fund may invest in shares of other funds, including exchange-traded funds (ETFs). As a result, the Fund will indirectly be exposed to the risks of an investment in the underlying funds. As a shareholder in a fund (as with ETFs), the Fund would bear its ratable share of that entity's expenses. At the same time, the Fund would continue to pay its own investment management fees and other expenses. As a result, the Fund and its shareholders will be absorbing duplicate levels of fees with respect to investments in other funds, including ETFs.

Risk of Investing in Foreign Securities. Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because many foreign securities markets may be limited in size, the prices of securities that trade in such markets may be influenced by large traders. Certain foreign markets that have historically been considered relatively stable may become volatile in response to changed conditions or new developments. Increased interconnectivity of world economies and financial markets increases the possibility that adverse developments and conditions in one country or region will affect the stability of economies and financial markets in other countries or regions. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore, not all material information may be available or reliable. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. The

Fund may invest in depositary receipts which involve similar risks to those associated with investments in foreign securities. In addition, the Fund may not receive shareholder communications or be permitted to vote the securities that it holds, as the issuers may be under no legal obligation to distribute shareholder communications.

Risk of Investing in Emerging Market Issuers. Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade. Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

Risk of Investing in the Financial Services Sector. The financial services sector includes engaged in banking, commercial and consumer finance, investment banking, brokerage, asset management, custody or insurance. Because as currently constituted the Index is concentrated in the financial services sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the financial services sector. Companies in the financial services sector may be subject to extensive government regulation that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain. The profitability of companies in the financial services sector may be adversely affected by increases in interest rates and by loan losses, which usually increase in economic downturns. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Furthermore, increased government involvement in the financial services sector, including measures such as taking ownership positions in financial institutions, could result in a dilution of the Fund's investments in financial institutions. Recent developments in the credit markets have caused companies operating in the financial services sector to incur large losses, experience declines in the value of their assets and even cease operations.

Risk of Investing in the Industrials Sector. The industrials sector includes companies engaged in the manufacture and distribution of capital goods, such as those used in defense, construction and engineering, companies that manufacture and distribute electrical equipment and industrial machinery and those that provide commercial and transportation services and supplies. Because as currently constituted the industrials sector represents a significant portion of the Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the industrials sector. Companies in the industrials sector may be adversely affected by changes in government regulation, world events and economic conditions. In addition, companies in the industrials sector may be adversely affected by environmental damages, product liability claims and exchange rates.

Risk of Investing in the Basic Materials Sector. The basic materials sector includes companies that manufacture chemicals, construction materials, glass and paper products, as well as metals, minerals and mining companies. Because as currently constituted the basic materials sector represents a significant portion of the Index, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, the overall condition of the basic materials sector. Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Risk of Investing in Medium-Capitalization Companies. Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risks associated with investing in the stock market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units (defined herein). Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Index, the Fund's return may deviate significantly from the return of the Index. In addition, the Fund may not be able to invest in certain securities included in the Index or invest in them in the exact proportions they represent of the Index, due to

legal restrictions or limitations imposed by the Chinese Government or a lack of liquidity on stock exchanges in which such securities trade. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its NAV based on fair value prices and the value of the Index is based on securities' closing prices on local foreign markets (i.e., the value of the Index is not based on fair value prices), the Fund's ability to track the Index may be adversely affected. Because swaps on A-shares are denominated in U.S. dollars and the underlying A-shares represented by the swaps are denominated in Chinese RMB, the ability of the Fund to track the Index is in part subject to foreign exchange fluctuations as between the U.S. dollar and the RMB. The terms of the swaps require the payment of the U.S. dollar equivalent of the RMB distributions and dividends received by the QFII, meaning that the Fund is exposed to foreign exchange risk and fluctuations in value between the U.S. dollar and the RMB.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Cash Transactions. Unlike most other ETFs, the Fund expects to effect all of its creations and redemptions for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF.

Non-Diversified Risk. The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the "1940 Act"). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Concentration Risk. The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Index concentrates in a particular sector or sectors or industry or group of industries. Based on the current composition of the Index, the Fund's assets are concentrated in the financial services sector; therefore, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

PERFORMANCE

The bar chart that follows shows how the Fund performed for the calendar years shown. The table below the bar chart shows the Fund's average annual returns (before and after taxes). The bar chart and table provide an indication of the risks of investing in the Fund by showing the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compared with the Fund's benchmark index and a broad measure of market performance. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after income taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.marketvectorsetfs.com.

Annual Total Returns Calendar Years

Best Quarter: 11.35% 4Q 12
Worst Quarter: -15.10% 3Q 11

Edgar Filing: MARKET VECTORS ETF TRUST - Form 497K

Average Annual Total Returns for the Periods Ended December 31, 2012. The after-tax returns presented in the table below are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown below. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

	Past One Year	Since Inception (10/13/2010)
Market Vectors China ETF (return before taxes)	9.54 %	-7.69 %
Market Vectors China ETF (return after taxes on distributions)	9.54 %	-8.10 %
Market Vectors China ETF (return after taxes on distributions and sale of Fund Shares)	6.20 %	-6.70 %
CSI 300 Index (reflects no deduction for fees, expenses or taxes)	10.92 %	-6.22 %
S&P 500® Index (reflects no deduction for fees, expenses or taxes)	16.00 %	11.38 %

PORTFOLIO MANAGEMENT

Investment Adviser. Van Eck Associates Corporation.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Hao-Hung (Peter) Liao	Portfolio Manager	October 2010
George Cao	Portfolio Manager	October 2010

PURCHASE AND SALE OF FUND SHARES

The Fund issues and redeems Shares at NAV only in a large specified number of Shares each called a Creation Unit, or multiples thereof. A Creation Unit consists of 50,000 Shares.

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Fund are listed on NYSE Arca, Inc. (NYSE Arca) and because Shares trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than or less than NAV.

TAX INFORMATION

The Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.
