

SOCKET COMMUNICATIONS INC
Form 10-K
March 21, 2007

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, DC 20549
FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2006

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934 For the transition period from _____ to _____

Commission file number 1-13810

SOCKET COMMUNICATIONS, INC.

(Exact name of registrant as specified in its charter)

Delaware

(State or other jurisdiction of incorporation or organization)

94-3155066

(IRS Employer Identification No.)

39700 Eureka Drive, Newark, CA 94560

(Address of principal executive offices including zip code)

(510) 933-3000

(Registrant's telephone number, including area code)

Securities registered under Section 12(b) of the Exchange Act:

Title of Each Class

Common Stock, \$0.001 Par Value per Share

Name of Exchange on Which Registered

The NASDAQ Stock Market LLC

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.
YES NO

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Exchange Act. YES NO

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Exchange Act during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. YES NO

Indicate by check mark if there is no disclosure of delinquent filers in response to Item 405 of Regulation S-K contained herein, and no disclosure will be contained, to the best of registrant's knowledge, in definitive proxy or

information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.
[X]

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer" and "large accelerated filer" in Rule 12b-2 of the Exchange Act. Large accelerated filer [] Accelerated filer [] Non-accelerated filer [X]

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).
YES [] NO [X]

As of June 30, 2006, the aggregate market value of the registrant's common stock (\$0.001 par value) held by non-affiliates of the registrant was \$35,844,005 based on the closing sale price as reported on the National Association of Securities Dealers Automated Quotation Global Market System.

Number of shares of common stock (\$0.001 par value) outstanding as of February 28, 2007: 31,883,886 shares

Documents Incorporated by Reference:

Items 10, 11, 12, 13, and 14 of Part III are incorporated by reference from the Registrant's Proxy Statement for the Annual Meeting of Stockholders to be held on April 18, 2007. Such Proxy Statement will be filed within 120 days after the end of the fiscal year covered by this Annual Report on Form 10-K.

PART I

This Annual Report contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. These statements include statements forecasting future financial results and operating activities, market acceptance of our products, expectations for general market growth of handheld computers and other mobile computing devices, growth in demand for our products, expansion of the markets that we serve, expansion of the distribution channels for our products, adoption of our embedded products by third-party manufacturers of electronic devices, and the timing of the introduction and availability of new products, as well as other forecasts discussed under "Management's Discussion and Analysis of Financial Condition and Results of Operations." Words such as "may," "will," "predicts," "anticipates," "expects," "intends," "plans," "believes," "seeks," "estimates," variations of such words, and similar expressions are intended to identify such forward-looking statements. Such forward-looking statements are based on current expectations, estimates, and projections about our industry, management's beliefs, and assumptions made by management. These forward-looking statements are not guarantees of future performance and are subject to certain risks, uncertainties, and assumptions that are difficult to predict; therefore, actual results and outcomes may differ materially from what is expressed or forecasted in any such forward looking statements. Factors that could cause actual results and outcomes to differ materially include, but are not limited to: the risk of delays in the availability of our products due to technological, market or financial factors including the availability of necessary working capital; our ability to successfully introduce and market future products; our ability to effectively manage and contain our operating costs; the availability of announced third-party handheld computer hardware and software that our products are intended to work with; product delays associated with new model introductions and product changeovers by the makers of products that our products are intended to work with; continued growth in demand for handheld computers; market acceptance of emerging standards such as Bluetooth and Wireless LAN and of our related connection and data collection products; the ability of our strategic relationships to benefit our business as expected;

our ability to enter into additional distribution relationships; or other factors described in this Form 10-K including "Item 1A. Risk Factors" and recent Form 8-K and Form 10-Q reports filed with the Securities and Exchange Commission. We assume no obligation to update such forward-looking statements or to update the reasons why actual results could differ materially from those anticipated in such forward-looking statements.

You should read the following discussion in conjunction with the consolidated financial statements and notes included elsewhere in this report, and other information contained in other reports and documents filed from time to time with the Securities and Exchange Commission.

Item 1. Business

The Company

We are a producer of mobile systems serving the business market. Mobile systems solutions typically consist of a handheld computer, data collection and connectivity peripherals, and third-party vertical applications software. We have historically offered a wide range of data collection and connectivity peripheral products and embedded products for use with mobile computing devices offered by third-parties. We have announced plans to offer a family of handheld computers with the first product scheduled to ship in the second quarter of 2007. See "Products" for a description of the products that we offer or plan to offer. We work with more than 100 software integration companies that are offering or developing vertical application software for use with handheld computers. Examples of these vertical applications include patient medication administration within the health care industry, retail merchandising such as managing inventory on retail store shelves, sales and field force automation involving the collection and processing of orders or service information from remote locations by sales and service personnel, asset management and inventory control for assets having bar codes or RFID tags, and mobile point of sale applications. These mobile solutions are designed to improve the productivity of business enterprises by automating manual tasks, improving the quality of information collected, and enhancing mobile productivity by processing and transferring information from remote locations and mobile devices to the business enterprise, and then if required, back to the remote locations and mobile devices.

(Table of Contents)

We believe that growth in the mobile workforce, technical advances and cost reductions in mobile devices and networking technologies, and the pervasive use of the Internet are driving broader adoption of mobile data communications. Our products are designed to address the growing need for mobile workforce connectivity by enabling the use of handheld computers to extend data communications capabilities beyond location-dependent wired networks or telephone lines, thereby enabling handheld computer users to enhance their productivity, exploit time sensitive opportunities and improve customer satisfaction. Overall, our products enable the integration of hardware, software and applications into complete mobile data collection and connectivity solutions.

Total employee headcount on December 31, 2006 was 83 people. We subcontract the manufacturing of substantially all of our products to independent third-party contract manufacturers who are located in the U.S., China and Taiwan and who have the equipment, know-how and capacity to manufacture products to our specifications. We market our products through a worldwide network of distributors and resellers, as well as through original equipment manufacturers (OEMs), Vertical Industry Partners and value added resellers. See "Personnel", "Sales and Marketing" and "Manufacturing" for additional information about our personnel, sales and marketing and manufacturing operations.

We have financed our operations since inception primarily from the sale of equity capital and have no long term debt. We also have a receivables based working capital line of credit with a bank that we use to generate additional cash, and we typically draw on this line of credit at the end of each quarter. Our data collection, connectivity and serial products are offered as standard products through general distribution channels and can be supplied within a few weeks of being ordered, so we do not have a large order backlog. Our order backlog at December 31, 2006 was \$1.2 million.

Socket Communications, Inc. was founded in March 1992 and reincorporated in Delaware in 1995. We began doing business as Socket Mobile, Inc. in January 2007 to better reflect our market focus on the mobile business market. Our common stock trades on the NASDAQ Global Market under the symbol "SCKT". Our principal executive offices are located at 39700 Eureka Drive, Newark, CA 94560, and our phone number is (510) 933-3000. Our Internet home page is located at <http://www.socketmobile.com>; however, the information on, or that can be accessed through our home page, is not part of this Annual Report. Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and any amendments to such reports are available free of charge on or through our Internet home page, as soon as reasonably practical after we electronically file such material with, or furnish it to, the Securities and Exchange Commission (SEC).

(Table of Contents)

Products

Our products may be classified into four broad product families:

- Mobile peripheral products;
- Handheld computer products;
- OEM embedded products; and
- Serial card products.

Our mobile peripheral products consist of data collection products and connectivity products, which together represented approximately 69 percent of our revenue for the year ended December 31, 2006.

Our *data collection products* enable the electronic collection of data from bar codes, RFID tags, or magnetic stripes and consist of:

- bar code scanning products that plug into or connect wirelessly to handheld computers, tablet computers, notebook computers and smartphones that use Windows Mobile, Windows XP, Windows Tablet, J2ME, or Symbian 60 or Symbian 80 operating systems, and turn these devices into portable bar code scanners that can be used in various retail and industrial workplaces;
- Radio Frequency Identification (RFID) plug-in products that read RFID tags;
- a combination plug-in bar code scanner and RFID reader; and
- a plug-in magnetic stripe reader.

We have developed extensive bar code scanning software called SocketScan that supports all of our data collection products, and have software developer kits that assist third-party developers in integrating our SocketScan software and our hardware products into their applications and solutions. Our bar code scanning products include

CompactFlash and SDIO plug-in bar code scanners for linear and two-dimensional bar code scanning, along with a cordless handheld bar code scanner and a ring scanner worn on the index finger, both of which connect to computing systems using the Bluetooth standard for short-range wireless connectivity. Data collection products represented approximately 42 percent, 39 percent, and 40 percent of our revenue for the years ended December 31, 2006, 2005 and 2004, respectively.

Our *connectivity products* are connection devices that can either be plugged into standard expansion slots in handheld computers, tablet computers, notebook computers and smartphones that use Windows Mobile, Windows XP, Windows Tablet, or Palm operating systems, or connect to these devices over wireless and wired connections. These products allow users to connect their devices to the Internet via mobile or wired phone services, or to private networks, or to communicate with other electronic devices such as desktop computers, other handheld, tablet and notebook computers, smartphones and printers. Our connectivity products include:

- plug-in cards using the Bluetooth standard for short-range wireless connectivity, along with extensive communications software enabling the use of these products;
- plug-in cards for connecting to local wireless networks using the Wireless LAN 802.11b/g (or Wi-Fi) standards along with extensive communications software enabling the use of these products.
- Modems for telephone connections that connect over a cable, and cordless modems that utilize Bluetooth wireless technology to connect a telephone to a Bluetooth-enabled computer or other device; and
- Ethernet cards for local area network connections that connect over a cable.

(Table of Contents)

Bluetooth and wireless LAN connection functions are being built into many third-party mobile devices, which may reduce the demand for these categories of our plug-in products but may increase the demand for our stand-alone Bluetooth products that work with other Bluetooth-enabled devices. Connectivity products represented approximately 27 percent, 34 percent and 32 percent of our revenue for the years ended December 31, 2006, 2005 and 2004, respectively.

Our *handheld computer* has been designed to address the market for a handheld computer that is neither a consumer-oriented PDA nor a heavy duty industrial device. It features the Microsoft Windows Mobile 5.0 professional operating system to ensure a high level of mobile application compatibility and to give workers a familiar computing environment. The computer is easy to customize and integrate with peripherals and information systems and has an expected product life cycle of three to five years to align with the needs of businesses for longer deployments than have been available with consumer-oriented PDAs. The handheld computer's features include Wireless LAN and Bluetooth, a fast processor, a large, bright screen display, large amounts of SDRAM and flash memory, extended battery life, programmable action buttons to activate peripheral devices, reinforced CompactFlash and SDIO card slots, and a durable case. The first customer shipments are expected to start during the quarter ended June 30, 2007, and additional versions are planned for later in the year and beyond.

Our *OEM embedded products* consist of Bluetooth and Wireless LAN modules and plug-in cards used by Original Equipment Manufacturers (OEMs) of handheld computers and other devices to build wireless connection functions into their products using the Bluetooth and Wireless LAN standards for wireless connectivity. OEM embedded products represented approximately 21 percent, 14 percent and 14 percent of our revenue for the years ended December 31, 2006, 2005 and 2004, respectively.

Our *serial card products* enable the connection of a mobile computer to another electronic device either as a plug-in card connecting over cables or wirelessly over a Bluetooth network. Serial card products represented approximately 10 percent, 13 percent and 14 percent of our revenue for the years ended December 31, 2006, 2005 and 2004, respectively.

We target business customers and markets with our products. Most of our products, except our embedded products, are sold through distributors and resellers that service enterprises. Our embedded products are sold directly to the manufacturers of products in which our products are embedded. The geographic regions we serve include the Americas, Europe, the Middle East, Africa and Asia Pacific.

Market Dynamics

Handheld computers have evolved over the past several years from simple devices used mainly to hold personal information into small portable units with functionality similar to desktop PCs. Many handheld computers, such as the Pocket PC and Palm Treo, have built-in expansion capabilities in standard form factors, typically CompactFlash, Secure Digital Input/Output or Bluetooth, to allow for transfer of data in and out of the handheld computer. Many handheld computers, such as the Palm Treo, Research-In-Motion's Blackberry and Pocket PC phone editions, also include an integrated phone to facilitate the transfer of data over mobile phone networks. Notebooks and tablet computers also have expansion capabilities to enable their use in mobile environments. Certain models of mobile phones called smartphones, which use the Windows Mobile and Symbian System 60 and 80 operating systems and have limited physical size and computing capabilities, are designed to process and store personal information and facilitate messaging over the mobile phone networks. The addition of Bluetooth wireless technology to these smartphones and to the Blackberry handheld computer from Research-In-Motion facilitates the transfer of data between these devices and networks or other devices.

(Table of Contents)

Advances in mobile network access and transfer speeds are enabling mobile computing device users to access the Internet, send and receive email, access corporate data files, and exchange instant messages anywhere and at any time through wireless local area networks, mobile phone networks or phone land lines, and to transfer data directly with other nearby mobile devices using Bluetooth wireless technology, cables or wireless local area networks. Our connectivity products and our serial products are designed to enable these connections by adding connections to devices that do not have them built-in, or by connecting to devices that have one or more of the wireless connection technologies built in. In addition, mobile devices with standard expansion capabilities are effective at collecting data. Our data collection products are designed to facilitate the collection of bar code and RFID information on these devices.

Handheld computers have traditionally been classified into consumer and industrial. Consumer devices such as those offered by Hewlett-Packard, Dell, Siemens or Acer are designed for personal use and fit in a pocket or purse. Industrial devices such as those offered by Symbol Technologies (now part of Motorola), Intermec and Hand Held Products are designed for rugged environments such as outdoors or warehouses and are much larger, heavier and more expensive. Businesses have had to choose from these two categories in designing mobile solutions, and we believe neither solution was an ideal fit for business needs. Our first handheld computer model, scheduled for introduction in the quarter ending June 30, 2007, is a standard Windows Mobile handheld device without telephony technology and is designed specifically to address essential business requirements to improve mobile worker productivity. Compared to consumer devices, it is similar in size and weight but is more durable, has programmable buttons to activate functions such as SocketScan, our data collection software, adds features such as seamless roaming to improve the worker

experience in using wireless LAN, incorporates Socket's Connect!Agent to improve users short range cordless Bluetooth technology, has faster processors, larger memory and extended battery life. Compared to industrial devices, it is smaller in size and weight, less rugged, and less expensive. Pricing is set at the high end of the consumer class of handheld computers. We plan to introduce additional models over the next several years to provide more choices to businesses that are deploying mobile computing solutions.

Growth in the mobile workforce and increasing reliance on the Internet and on access to corporate databases and email are increasing the demand for mobile data communications. The capability of a mobile workforce to enter data in the field and to transfer it electronically generally improves the timeliness and accuracy of information such as order entry, process management or transaction reporting. Advances in connection technologies, local area networking and wide area networking are being commercialized to allow handheld computers to interact with nearby computers and with a wide array of electronic appliances, including mobile phones, printers, digital cameras, local area network access points, Global Positioning System receivers, automobile communications systems, bar code scanners, radio frequency identification tags, home entertainment and security systems, public kiosks, public Internet access locations and vending machines.

(Table of Contents)

Current market dynamics driving adoption of mobile data communications include:

Functionality of today's mobile computing devices is extensive and improving. Unlike early models, most mobile computing devices now offer bright outdoor color screens and longer battery life, have software allowing their use as business messaging devices with capacity to store personal information, and have standard expansion capabilities or use Bluetooth or wireless local or wide area network connections to transfer data in and out of the device. Popular desktop programs such as Word and Excel are available for today's handheld, tablet and notebook computers, enabling users to send and receive emails with full attachments, run popular personal information management and business programs, run entertainment and education software for games, music or books, view and interact with the Internet with enhanced and feature-rich graphics, have direct access to corporate data files (subject to business security arrangements), and use instant messaging over mobile networks. Mobile devices also can become lightweight mobile bar code and RFID scanning devices when used with our bar code scanning or RFID products, enabling the capture and processing of bar code or RFID information in a mobile environment.

Manufacturers continue to develop and expand product lines of mobile computing devices. Marketing efforts by mobile computing device manufactures will assist in educating the market on the capabilities of these devices using our connection products. One of the largest manufacturers of handheld computers using the Microsoft Windows Mobile operating system is Hewlett-Packard. Some models integrate phones into the handheld computer and others do not. Hewlett-Packard along with other computer manufacturers such as Siemens, Toshiba and Fujitsu offer tablet or notebook computers with standard expansion capabilities. Manufacturers of industrial versions of Pocket PCs include Symbol Technologies, Intermec, Hand Held Products, Casio, Itronix, TopCon and Tripod Data Systems. Palm's Tungsten series of handheld computer and its Treo, a smartphone, have expansion slots and Bluetooth connectivity to facilitate data transfer. Palm also introduced in early 2006 a version of their Treo smartphone that uses the Windows Mobile operating system. Smartphones are also becoming widely available from mobile phone manufacturers using the Symbian 60 and Symbian 80 operating systems, including Nokia, LG, Lenova, Panasonic, Samsung, Sendo and Siemens, or the Windows Mobile operating system, such as Motorola. These phones use Bluetooth and, in some Windows Mobile smartphones, SDIO slots to facilitate the transfer or the collection of data. Increased competition among manufacturers is expected to result in increased availability and greater promotion of mobile computing devices that can be used with our products during 2007 and beyond.

Mobile phone networks continue to be upgraded to provide faster data speeds and connections at reduced cost. Mobile phone service providers are making substantial investments to upgrade their networks to support high-speed data transfer applications. The introduction of new networking equipment and technologies has substantially increased data transfer speeds over regular digital cellular phone networks. Available data rates today can exceed the speeds experienced on a desktop computer connected over a phone line with a dial-up modem. These higher speeds are making mobile data applications more attractive to users and driving demand for connection products to facilitate data transfer over digital cellular mobile phone networks.

(Table of Contents)

The mobile workforce is growing and is increasingly reliant on email and the Internet. The worldwide mobile workforce has been estimated at more than 20 percent of the global workforce. Before recent advancements in handheld computers and wireless networks over mobile phones and through wireless local area network access points, the mobile workforce had been unable to effectively stay connected with email, the Internet or corporate data except through telephone lines. With the growth in the use of the Internet and email for business and personal applications, workers and consumers are increasingly dependent on access to the Internet and email for managing their business and personal lives. Recent improvements in mobile phone and wireless LAN connectivity and deployment of mobile computers by corporations to their mobile workforce are expected to be major factors driving growth in mobile data applications over the next several years.

Third-party applications for enterprises are becoming available in increasing numbers. Third-party software applications are becoming available for the collection, processing and transfer of information by a mobile workforce. Mobile computing devices are being used for such diverse applications as checking patient medications when administering them in a hospital, capturing lot numbers of drug samples given to a doctor, managing the stocking of shelves in retail establishments, or entering sales orders from the field. Larger enterprise software companies such as Oracle Corporation have written applications for the Pocket PC that use our bar code scanning products. SAP has enabled our SDIO form factor scanning card in all mobile applications developed by SAP and by other vendors that interface with SAP solutions through SAP's NetWeaver Mobile program. We have supported the development and deployment of our products in third-party applications through our Vertical Industry Partners (VIP) Program and more than 100 companies are participants in this program. Our VIP Program is described more fully under "Sales and Marketing." The availability of productivity-enhancing application software is a major driver of enterprise deployment of mobile computing devices.

Marketing Strategy

Our marketing strategy has been to capitalize on our strategic relationships, expand and improve our product offerings to differentiate our products, build a stronger brand name, support the development of third-party software applications and integrator solutions, introduce our products into new markets by increasing the number of mobile device platforms that our products support, and encourage device manufacturers to build our technology directly into their products. With the introduction of our mobile handheld computer, we will also offer a complete hardware solution consisting of a mobile handheld computer and peripherals which will allow value added resellers and integrators to offer a one-stop solution in combination with their own or third-party vertical software applications for the mobile workforce.

Capitalize on Strategic Relationships. We support and encourage direct endorsements and referrals for our products from our strategic relationships, including operating system providers, device manufacturers, third-party software developers, Vertical Industry Partners (VIP), distributors, and end-user customers. We actively promote third-parties

to integrate our products into their solutions through our VIP Program. We have a team of employees that manages each strategic relationship, and we provide software developer kits and technical support to our software and hardware developers. We have built close working relationships with a number of companies that help us expand and market our products, as new standards, technologies and markets emerge, including Microsoft, the general purpose Windows Mobile handheld device manufacturers (Hewlett-Packard being one of the largest) and Symbol Technologies, recently acquired by Motorola. We coordinate our product development efforts with Microsoft on an ongoing basis, with the goal of ensuring that our current and future products are compatible with new releases of Microsoft's operating systems. We spend extensive engineering time and resources to ensure compatibility with a wide variety of handheld computers including Pocket PCs, the Palm Treo, the Blackberry from Research-In-Motion, and smartphones using the Symbian 60 and 80 operating system. Dell is a direct reseller of our products. We work closely with the sales teams of Dell and Hewlett-Packard to assist them in offering mobile device solutions that include our products.

(Table of Contents)

Expand and improve our product offerings to differentiate our products. We offer a wide range of data collection and connectivity products that are used with mobile devices, and we encourage our distributors to carry the full range of our products. The goal is for customers to view Socket as a single source for their connection needs, instead of having to rely on individual product offerings from a number of different companies. During the past three years, we have introduced a number of hardware and software products, including a Cordless Hand Scanner using Bluetooth wireless technology, a cordless 56K modem using Bluetooth wireless technology, a 56K plug-in modem in SDIO form factor, an RFID reader, a combination RFID reader and laser bar code scanner, a cordless ring bar code scanner designed to be worn on the index finger for use in package handling, an 802.11g upgrade to our CompactFlash 802.11b wireless LAN card, a wireless LAN module to add embedded Wireless LAN to our OEM product offerings and a mobile power pack. We continue to add features to our Bluetooth software for Windows notebooks and tablets, our wireless local area network software and SocketScan, our bar code scanning and RFID software. During 2006, we upgraded our products to comply with the Reduction of Hazardous Substances (RoHS) rules being implemented in Europe and around the world by changing the solder used in our products to be lead-free, which increased our engineering expense during the first half of the year. The addition of a mobile handheld computer to our product line in 2007 will, we believe, make it easier for our customers to build mobile computing solutions, both because our handheld computer has been designed specifically for business use, and because it will enable the purchase of the entire hardware solution from one vendor, simplifying the processes of integration and support.

Build a Stronger Brand Name. We are building a brand image of "Increasing Mobile Productivity." This image emphasizes quality and standards-based connectivity and data collection products that are "Mobility Friendly," which means products that are compact, low power, and easy to use. Our focus is to work with our partners to develop productivity enhancing solutions for the mobile workforce. In January 2007, we began doing business as Socket Mobile, Inc. to emphasize our commitment to mobile computing. Our overall company, brand identity and positioning, is to become "the leading provider of easy-to-deploy business mobility systems and peripherals."

Support the development of third-party software applications and integrator solutions. We have created software developer kits for many of our products, including bar code scanning, RFID, Bluetooth and Wireless LAN. In addition, we have several employees dedicated to assisting developers and integrators with integrating our products into their solutions. Our VIP Program includes over 100 companies that offer or are developing software solutions which incorporate Socket products. These solutions primarily involve data collection and address improving productivity of the mobile workforce in a number of categories including field force automation, asset management, retail merchandising, automotive/transportation and health care.

(Table of Contents)

Introduce our products into new markets by increasing the number of mobile device platforms that our products support. Our focus during the past several years has been to develop connectivity and data collection products for handheld computers, with an emphasis on the Pocket PC. We support mobile devices that have the following characteristics: truly portable devices that are easily carried and used while mobile; open software architectures such as Windows, Palm and Symbian; and a standard expansion mechanism such as CompactFlash, Secure Digital Input/Output or Bluetooth. We enable the use of our cordless and SDIO data collection products to work with smartphones that use the Symbian 60 and Symbian 80 operating systems and enable our Cordless data collection products to work with Bluetooth-enabled Blackberry handheld computers from Research-In-Motion.

Encourage device manufacturers to build our technology directly into their products. To capture embedded connection business, we have built relationships with certain mobile device manufacturers and work with them to integrate our Bluetooth software and modules into their own product designs. The majority of these manufacturers are building vertical application devices for special purpose markets. We have recently added to our OEM products Wireless LAN software and modules to enable our customers to embed our Wireless LAN technology into their devices. We have an internal team of employees that manages our embedded products business. We also provide developer support to our mobile device manufacturer customers to assist them as needed to integrate our embedded products into their mobile devices.

Competition and Competitive Risks

The overall market for data collection and connectivity products is both complex and competitive, and we expect competition in our market areas to intensify, particularly for our connectivity products, which compete with similar products that are manufactured by companies in Asia and offered to the market at lower costs. However, our longtime focus on creating data collection and connectivity products for mobile devices has resulted in good brand name recognition and reputation. In addition, we continue to innovate and intend to be early to market in a number of product categories. We also believe that our brand name identifies our products as robust, dependable, small form factor, low power and easy to use, and the breadth of our product offerings, including the extensive features of our software, will continue to differentiate us relative to our competitors. Finally, the addition of a handheld computer in 2007 will enable us to better control the handheld computing environment for our peripheral products and offer one-stop shopping for the hardware portion of mobile business solutions. The competition in each of our product families is discussed in more detail below.

Data Collection Products. Our laser and CMOS imager bar code scanning products face competition from ruggedized integrated bar code scanning devices from Symbol Technologies (recently acquired by Motorola), Intermec, Hand Held Products, Casio, Itronix and others. Many of these companies have been expanding their product lines to offer less expensive devices designed for enterprise use, which is narrowing the gap between the cost of consumer devices using our peripheral data collection products and industrial devices. We purchase laser engines from Motorola (formerly Symbol Technologies) and are licensed by Motorola to use these engines in our bar code scanning products. We also purchase imagers from Motorola and from other companies for use in our products. We face competition outside of the United States from a product similar to our In-Hand Scan Card from BeInteractive, from products similar to our Cordless Hand Scanner from Baracoda, and from other competitive laser scanning products from Grabba (Australia) and Opticon (Japan).

(Table of Contents)

Motorola's patent position for laser bar code scanning tends to limit the sale of laser scanning bar code products by competitors in the United States, but a number of the Motorola patents will expire over the next several years, and we may face increasing competition from competitors both inside and outside the United States. In addition, companies such as Intermec have improved imager technology making it a more viable alternative to laser scanning, and we expect to face more competition over time from devices deploying imaging technology. Our laser scanning products are targeted to address specific market segments, such as patient medication administration within the health care industry, retail merchandising such as managing inventory on retail store shelves, sales and field force automation involving the collection and processing of orders or service information from remote locations by sales and service personnel, asset management and inventory control for assets having bar codes or RFID tags, and mobile point of sale applications. We produce our laser bar code scanning products under a license from Motorola (Symbol), which, to date, has not licensed these technologies to potential competitors. Motorola (Symbol) has historically been selective in licensing their technologies to third-parties, and we have no reason to anticipate that their practices will change. Nonetheless, the continued availability of our licenses from Motorola and the continued absence of other licensees are dependent upon future licensing decisions by Motorola.

Connectivity Products - Wireless Connections. Our Wireless LAN cards face competition in the market today principally from other manufacturers of low power Wireless LAN 802.11g cards, including Ambicom and Linksys for CF cards, and AmbiCom, Spectec and Mobis for SDIO cards. We compete based on our brand name, distribution and customer support infrastructure, as well as software enhancements that provide ease-of-use, security features, and monitoring and troubleshooting tools. Our Wireless LAN cards also support Wi-Fi Protected Access (WPA) on Windows Mobile 2003/5.0. WPA is an industry standard method for securing wireless LANs for corporate and small office/home office environments established by the Wi-Fi Alliance, an industry trade association and standards setting body. The market for Bluetooth wireless communications technology is highly competitive. A number of companies offer competing CompactFlash Bluetooth cards including Ambicom, Brainboxes and Billionton. Our Bluetooth CompactFlash plug-in card is the only card in the market that has an integrated antenna, allowing it to fit completely within a CompactFlash Type 1 slot. Our Bluetooth software, which continues to be improved, provides a functional, easy-to-use Bluetooth solution and has been enabled to work on Windows Mobile 5.0 devices, on selected handheld computers from Motorola (formerly Symbol Technologies) and on devices manufactured by our OEM customers. There are also a number of competitors that offer Bluetooth modems. These companies include Billionton Systems, ENR Technologies, Motorola, PSI, SiteCom, Sony, Typhoon, Trust, X Micro and Zoom.

Connectivity Products - Cable Connections. We are one of two principal manufacturers of low power Ethernet cards, the other being OvisLink. Our CompactFlash modem cards face competition from a number of manufacturers including Ambicom, Billionton Systems, Hawking, Zonet, OvisLink, Pharos, Trendware and Xircom.

Handheld computer. Historically we have worked closely with handheld computer manufacturers to allow our peripheral products to work with their handheld computers, and we will continue to do so following the introduction of our own handheld computer scheduled for the quarter ending June 30, 2007. Our handheld computer's features and pricing are positioned between the consumer grade handheld computers offered by Hewlett-Packard, Dell, Acer, Siemens and others and the industrial ruggedized grade of handheld computers offered by Symbol Technologies (acquired by Motorola), Intermec and Hand Held Products with features designed specifically for business use and our peripheral products are used with many of these handheld computers. These companies have offered handheld computers for many years and have an established market presence, and although we differentiate our product, their handheld computers are likely to be competitive alternatives to our handheld computer.

(Table of Contents)

Embedded Products. Competition for our embedded products is primarily the same competition we face for the applicable plug-in product in one or more of our other product families, as plug-in connection cards are an alternative to embedded connections. Our Bluetooth and WLAN software works well with our hardware, providing us a complete solution for embedding Bluetooth and WLAN wireless connections into third-party devices. However, manufacturers in Asia selling primarily hardware, such as Alps, Murata, and TaiyoYuden, along with integrators such as Bluesoft and Stonestreet One, are able to produce all or part of embedded solutions which may compete with our products and services.

Serial Products. Our serial products compete from time to time with similar products from small manufacturers including BeInteractive, Brainboxes, B&B Electronics, Elan Digital Systems, Quatech (now part of DPAC Technologies), and Ratoc Systems. We also offer a cordless serial adapter with Bluetooth wireless technology. Companies that offer competing Bluetooth serial products include AIRcable, Brainboxes, ConnectBlue, Digi International, Ezurio, Free 2 Move, Initium and Wavespeed.

Proprietary Technology

We have developed a number of technological building blocks that enhance our ability to design new hardware and software products, to offer products which run on multiple software and hardware platforms, and to manufacture and package products efficiently.

One of our most important chip hardware building blocks is our proprietary mobility integrated circuit, which is a highly flexible interface for PC Cards and CompactFlash cards that enables our products to work with all major handheld and notebook computers that have PC Card or CompactFlash slots, regardless of their design. We have incorporated our mobility integrated circuit into a broad range of our peripheral products to control signal transmission between these products and the handheld or notebook computer's PC Card or CompactFlash slot.

Another area of intellectual property is our expertise in embedded radio-dependent firmware. Within our Bluetooth cordless products are software and firmware that include a wide variety of functions to enable efficient radio control and overall systems functionality. For cordless bar code scanning and RFID reading, this includes our patented Error Proof Protocol, which is designed to ensure that scanned data is correctly received by the mobile computing device and allow for real-time validation of data and error notification to the user.

We have developed a library of software drivers and control modules that allow our products to operate in handheld computers running the Windows Mobile operating systems and in notebooks running various Windows and third-party operating systems. We have been awarded eight U.S. Patents and one UK patent covering our design for cards combining connectivity and removable memory. In July 2004 we also acquired from Khyber Technologies a U.S. patent entitled Card Shaped Computer Peripheral Device. The patent is a basic patent covering the design and functioning of plug-in bar code scanners, bar code imagers and RFID products. We have additional patents covering our proprietary technology pending with the U.S. Patent and Trademark Office.

(Table of Contents)

We have developed a number of software programs that provide unique functions and features for our connection and

data collection products. For example, our SocketScan software enables all of our bar code scanning products to scan a variety of bar codes and to route the scanned data to many different types of data files. Our Bluetooth software used in conjunction with our Bluetooth hardware provides a completely functional Bluetooth solution enabling connections and data transfers between Bluetooth-enabled devices. Our wireless local area network software that is integrated with our wireless local area network management software (which we call Wi-Fi Companion) and used in conjunction with our wireless local area network hardware, provides a completely functional wireless local area network solution, enabling connections and data transfers from mobile computing devices over wireless local area networks. Our Wi-Fi Companion software is also designed to work with built-in wireless local area network hardware from other manufacturers.

We have registered trademarks with the U.S. Patent and Trademark Office for "Socket", our logo, and the term "Battery Friendly" and we have applied for trademarks for more recent products including "Go-WiFi" for our Wireless LAN products and "SoMo" for our handheld computer.

We rely on a combination of patent, copyright, trademark and trade secret laws, and confidentiality procedures to protect our proprietary rights. As part of our confidentiality procedures, we generally enter into non-disclosure agreements with our employees, distributors and strategic partners, and limit access to our software, documentation and other proprietary information. Despite these precautions, it may be possible for a third-party to copy or otherwise obtain and use our products or technology without authorization, or to develop similar technology independently. In addition, we may not be able to effectively protect our intellectual property rights in certain foreign countries. From time to time we receive communications from third-parties asserting that our products infringe, or may infringe, their proprietary rights. In connection with any such claims, litigation could be brought against us that could result in significant additional expenses or compel us to discontinue or redesign some of our products.

Personnel

Our future success will depend in significant part upon the continued service of certain of our key technical and senior management personnel, and our continuing ability to attract, assimilate and retain highly qualified technical, managerial and sales and marketing personnel. Our total employee headcount as of December 31, 2006 was 83 people. Our employees are not represented by a union, and we consider our employee relationships to be good.

Sales and Marketing

During the year ended December 31, 2006, 68 percent of our sales were in North America, 24 percent in Europe, and 8 percent in Asia and Pacific Rim countries. During the year ended December 31, 2005, 65 percent of our sales were in North America, 24 percent in Europe and 11 percent in Asia and Pacific Rim countries. Export sales are subject to the complications of complying with laws of various countries and the risk of import/export restrictions and tariff regulations.

(Table of Contents)

We market our products through a worldwide network of distributors and resellers, as well as through original equipment manufacturers (OEMs) and value added resellers. In addition, we have more than 100 companies that are participants in our Vertical Industry Partners (VIP) program. Participants offer or intend to offer third-party software applications that utilize our products in their software solutions. Vertical market segments addressed by participants include field force automation, retail merchandising, healthcare, government, automotive/transportation, and asset management. Applications include checking patient medications when administering them in a hospital, capturing lot

numbers of drug samples given to a doctor, managing the stocking of shelves in retail establishments, entering sales orders from the field, taking inventory of bar coded items, and entering and updating information in an enterprise data base. We support our distributors, resellers and integrators with software developer kits and by providing education, training and customer assistance through our sales, marketing, and technical support staff in the U.S., Europe and Asia-Pacific regions. As of December 31, 2006, we had 32 people in sales, marketing and customer and developer services support.

Our United States distributor Tech Data Corp. accounted for 26 percent of our revenue in 2006 and 28 percent of our revenue in each of 2005 and 2004. Our United States distributor Ingram Micro, Inc. accounted for 14 percent of our revenue in each of 2006 and 2005 and 15 percent of our revenue in 2004. We intend to increase our sales and marketing effort during 2007 by adding personnel and increasing promotional activities, particularly in support of our distributors and Vertical Industry Partners.

Consistent with industry practice, we provide our distributors with stock balancing and price protection rights which permit these distributors to return slow-moving products to us for credit, and to receive price adjustments for inventories of our products held by the distributors if we lower the price of those products. The immediate effect of returns and adjustments on our quarterly operating results is limited, since we recognize revenues on products shipped to distributors only at the time the merchandise is sold by the distributor. To date, we have not experienced any significant returns or price protection adjustments.

We rely significantly on our OEMs, distributors, and resellers for marketing and distribution of our products. Our agreements with OEMs, distributors, and resellers generally are nonexclusive and may be terminated on short notice by either party without cause. Furthermore, our OEMs, distributors and resellers are not within our control, are not obligated to purchase products from us, and may represent other lines of products, including those of our competitors. If any OEMs, distributors, or resellers reduce or discontinue efforts to sell our products, our revenues and operating results could be materially adversely affected.

Manufacturing

We subcontract the manufacturing of substantially all of our products to independent third-party contract manufacturers who are located in the U.S., China, and Taiwan and who have the equipment, know-how and capacity to manufacture products to our specifications. We perform final product testing and package our products at our Newark, California facility for most of our sales. As of December 31, 2006, we had 28 people employed in manufacturing operations, including planning, buying, manufacturing engineering, quality control, product assembly, shipping and receiving, MIS and customer support. We augment this workforce with temporary employees on an as-needed basis.

(Table of Contents)

Certain of our product components are available from only one vendor. These sole sourced components include the interface chip that controls the signal transmission between all of our plug-in CompactFlash products (except our Ethernet and Wireless LAN cards) and the card slot on the mobile computer, our Ethernet and Wireless LAN chips, our laser scanning engines, our SDIO plug-in cards, certain cable and connector components and, beginning in 2007, our handheld computer. Although to date we have generally been able to obtain adequate supplies of these components, these components are generally purchased on a purchase order basis under standard commercial terms and conditions, and we do not have long-term supply contracts for these components. Accordingly, the manufacturers could stop providing these components to us at any time. Alternatively, although our suppliers are generally large,

well-financed organizations, they could encounter financial difficulties that interfere with our product supplies. In such an event, we could experience a decline in revenues until we establish sufficient manufacturing supply through an alternative source. Locating and qualifying alternative suppliers, and commencing new manufacturing operations, could take a significant period of time, although we believe that we can relocate manufacturing or find alternative suppliers for sole sourced components should it become necessary. We generally stock higher inventory quantities of sole sourced components as safety stocks to mitigate the risk of supply disruption.

Research and Development

Since our inception, we have made substantial investments in research and development. Research and development expenditures were \$5.1 million in 2006 compared to \$3.5 million and \$3.6 million in 2005 and 2004, respectively. The increased expenditures in 2006 were in part due to an increase in the number of development projects including the removal of lead from our products as required by the Reduction in Hazardous Substances Act and new product development costs for our cordless ring scanner and our handheld computer. We believe that our future performance will depend in large part on our ability to develop significant enhancements to our existing products and to develop successful new products for emerging and existing markets.

As of December 31, 2006, we had fourteen people on our product development staff, and we hire engineering consultants to perform additional engineering services as required. We anticipate that we will continue to commit substantial resources to research and development in the future.

General and Administration

As of December 31, 2006, we had nine people responsible for our financial and administrative activities including accounting and finance, personnel, and administrative support.

(Table of Contents)

Item 1A. Risk Factors

We have a history of operating losses and may not achieve ongoing profitability.

We were unprofitable in each of the quarters in fiscal 2006. We were profitable in two quarters in 2005, but unprofitable for fiscal year 2005. Fiscal year 2004 was the first profitable year in our history, but only to the extent of \$288,000. Prior to 2004, we incurred significant operating losses in each financial period since our inception. To achieve ongoing profitability, we must accomplish numerous objectives, including growth in our business and the development of successful new products. We cannot foresee with any certainty whether we will be able to achieve these objectives in the future. Accordingly, we may not generate sufficient net revenue to achieve ongoing profitability. If we cannot achieve ongoing profitability, we will not be able to support our operations from positive cash flows, and we would use our existing cash to support operating losses. If we are unable to secure the necessary capital to replace that cash, we may need to suspend some or all of our current operations.

We may require additional capital in the future, but that capital may not be available on reasonable terms, if at all, or on terms that would not cause substantial dilution to your stock holdings.

Although we do not anticipate the need to raise additional capital during the next twelve months to fund our operations, we may incur operating losses in future quarters and may need to raise capital to fund these losses. Our

forecasts are highly dependent on factors beyond our control, including market acceptance of our products and sales of handheld computers. If capital requirements vary materially from those currently planned, we may require additional capital sooner than expected. There can be no assurance that such capital will be available in sufficient amounts or on terms acceptable to us, if at all. In addition, the availability of our bank line is dependent upon our meeting certain covenants, including a tangible net worth covenant. Future operating losses could cause us to lose the availability of our bank line as a result of becoming non-compliant with these covenants.

If third-parties do not produce and sell innovative products with which our products are compatible, or if our line of handheld computers is not successful, we may not achieve our sales projections.

Our success has been dependent upon the ability of third-parties in the mobile personal computer industry to complete development of products that include or are compatible with our technology and then to sell these products into the marketplace. Even if we are successful in marketing and selling our new line of handheld computers, our ability to generate increased revenue depends significantly on the commercial success of Windows-mobile handheld devices, particularly the Pocket PC and other devices such as the line of handhelds with expansion options offered by Palm, and the adoption of handheld computers for business use. If manufacturers are unable or choose not to ship new products such as Pocket PC and other Windows-mobile devices or Palm devices on schedule, or experience difficulties with new product transitions that cause delays in the market as we experienced in 2005 and 2006, or if these products fail, including our new line of handheld computers, to achieve or maintain market acceptance, the number of our potential new customers would be reduced and we would not be able to meet our sales expectations.

(Table of Contents)

If we fail to develop and introduce new products rapidly and successfully, we will not be able to compete effectively, and our ability to generate sufficient revenues will be negatively affected.

The market for our products is prone to rapidly changing technology, evolving industry standards and short product life cycles. If we are unsuccessful at developing and introducing new products and services on a timely basis that include the latest technologies conforming to the newest standards and that are appealing to end users, we will not be able to compete effectively, and our ability to generate significant revenues will be seriously harmed.

The development of new products and services can be very difficult and requires high levels of innovation. The development process is also lengthy and costly. Short product life cycles expose our products to the risk of obsolescence and require frequent new product introductions. We will be unable to introduce new products and services into the market on a timely basis and compete successfully, if we fail to:

- identify emerging standards in the field of mobile computing products;
- enhance our products by adding additional features;
- invest significant resources in research and development, sales and marketing, and customer support;
- maintain superior or competitive performance in our products; and
- anticipate our end users' needs and technological trends accurately.

We cannot be sure that we will have sufficient resources to make adequate investments in research and development or that we will be able to identify trends or make the technological advances necessary to be competitive.

Beginning January 1, 2006 we began to expense options granted under our employee stock plans as compensation, and as a result our net income and earnings per share were negatively affected, we may continue

to have net losses as a result of the requirement to expense options, and may find it necessary to change our business practices to attract and retain employees.

Historically, we have used stock options as a key component of our employee compensation packages. We believe that stock options provide an incentive to our employees to maximize long-term stockholder value and, through the use of vesting, encourage valued employees to remain with us. The expensing of employee stock options adversely affected our net income and earnings per share in fiscal 2006, will continue to adversely affect future quarters, and will make profitability harder to achieve or make our net losses worse. In addition, we may decide in response to the effects of expensing stock options on our operating results to reduce the number of stock options granted to employees or to grant options to fewer employees. This could adversely affect our ability to retain existing employees and attract qualified candidates, and also could increase the cash compensation we would have to pay to them.

A significant portion of our revenue currently comes from two distributors, and any decrease in revenue from these distributors could harm our business.

A significant portion of our revenue comes from two distributors, Tech Data Corp. and Ingram Micro, Inc., which together represented approximately 40 percent, 42 percent, and 43 percent of our worldwide revenue in fiscal years 2006, 2005, and 2004, respectively. We expect that a significant portion of our revenue will continue to depend on sales to Tech Data Corp. and Ingram Micro, Inc. We do not have long-term commitments from Tech Data Corp. or Ingram Micro, Inc. to carry our products. Either could choose to stop selling some or all of our products at any time, and each of these companies also carries our competitors' products. If we lose our relationship with Tech Data Corp. or Ingram Micro, Inc., we would experience disruption and delays in marketing our products. Revenues related to these two major distributors fell markedly in the third quarter 2006 to 32 percent, due primarily to a reduction in the level of corporate handheld deployments by one of our key North American channel partners.

(Table of Contents)

If the market for mobile computers experiences delays, or fails to grow, we will not achieve our sales projections.

Substantially all of our products are designed for use with mobile personal computers, including handhelds, notebook computers, tablets and smartphones. If the mobile personal computer industry does not grow, if its growth slows, or if product or operating system changeovers by mobile computer manufacturers and partners cause delays in the market, as we experienced in 2006 and 2005, or if the markets for our mobile handheld computers do not grow, we will not achieve our sales projections.

Our sales will be hurt if the new technologies used in our products do not become widely adopted, or are adopted slower than expected.

Many of our products use new technologies, such as 2D bar code scanning and RFID, which are not yet widely adopted in the market. If these technologies fail to become widespread, or are adopted slower than expected, our sales will suffer.

We could face increased competition in the future, which would adversely affect our financial performance.

The market for handheld computers in which we operate is very competitive. Our future financial performance is contingent on a number of unpredictable factors, including that:

- some of our competitors have greater financial, marketing, and technical resources than we do;
- we periodically face intense price competition, particularly when our competitors have excess inventories and discount their prices to clear their inventories; and
- certain original equipment manufacturers of personal computers, mobile phones and handheld computers offer built-in functions, such as Bluetooth wireless technology, Wi-Fi, or bar code scanning, that compete with our products.

Increased competition could result in price reductions, fewer customer orders, reduced margins, and loss of market share. Our failure to compete successfully against current or future competitors could harm our business, operating results and financial condition.

(Table of Contents)

If we do not correctly anticipate demand for our products, our operating results will suffer.

The demand for our products depends on many factors and is difficult to forecast. We expect that it will become more difficult to forecast demand as we introduce and support more products and as competition in the market for our products intensifies. If demand increases beyond forecasted levels, we would have to rapidly increase production at our third-party manufacturers. We depend on suppliers to provide additional volumes of components, and suppliers might not be able to increase production rapidly enough to meet unexpected demand. Even if we were able to procure enough components, our third-party manufacturers might not be able to produce enough of our devices to meet our customer demand. In addition, rapid increases in production levels to meet unanticipated demand could result in higher costs for manufacturing and supply of components and other expenses. These higher costs could lower our profit margins. Further, if production is increased rapidly, manufacturing yields could decline, which may also lower operating results.

If demand is lower than forecasted levels, we could have excess production resulting in higher inventories of finished products and components, which could lead to write-downs or write-offs of some or all of the excess inventories. Lower than forecasted demand could also result in excess manufacturing capacity at our third-party manufacturers and in our failure to meet minimum purchase commitments, each of which may lower our operating results.

We rely primarily on distributors, resellers, and original equipment manufacturers to sell our products, and our sales would suffer if any of these third-parties stops selling our products effectively.

Because we sell our products primarily through distributors, resellers, and original equipment manufacturers, we are subject to risks associated with channel distribution, such as risks related to their inventory levels and support for our products. Our distribution channels may build up inventories in anticipation of growth in their sales. If such growth in their sales does not occur as anticipated, the inventory build up could contribute to higher levels of product returns. The lack of sales by any one significant participant in our distribution channels could result in excess inventories and adversely affect our operating results.

Our agreements with distributors, resellers, and original equipment manufacturers are generally nonexclusive and may be terminated on short notice by them without cause. Our distributors, resellers, and original equipment manufacturers are not within our control, are not obligated to purchase products from us, and may offer competitive lines of products simultaneously. Sales growth is contingent in part on our ability to enter into additional distribution relationships and expand our sales channels. We cannot predict whether we will be successful in establishing new distribution relationships, expanding our sales channels or maintaining our existing relationships. A failure to enter into new

distribution relationships or to expand our sales channels could adversely impact our ability to grow our sales.

We allow our distribution channels to return a portion of their inventory to us for full credit against other purchases. In addition, in the event we reduce our prices, we credit our distributors for the difference between the purchase price of products remaining in their inventory and our reduced price for such products. Actual returns and price protection may adversely affect future operating results, particularly since we seek to continually introduce new and enhanced products and are likely to face increasing price competition.

(Table of Contents)

We depend on alliances and other business relationships with a small number of third-parties, and a disruption in any one of these relationships would hinder our ability to develop and sell our products.

We depend on strategic alliances and business relationships with leading participants in various segments of the communications and mobile personal computer markets to help us develop and market our products. Our strategic partners may revoke their commitment to our products or services at any time in the future or may develop their own competitive products or services. Accordingly, our strategic relationships may not result in sustained business alliances, successful product or service offerings, or the generation of significant revenues. Failure of one or more of such alliances could result in delay or termination of product development projects, failure to win new customers, or loss of confidence by current or potential customers.

We have devoted significant research and development resources to design activities for Windows-mobile products, Palm devices, smartphones using Windows Mobile and Symbian System 60 and 80 operating systems, handheld computers from Research-in-Motion, and more recently, to developing our own family of handheld mobile computers. Such design activities have diverted financial and personnel resources from other development projects. These design activities are not undertaken pursuant to any agreement under which Microsoft, Palm, Symbian or Research-in-Motion is obligated to continue the collaboration or to support the products produced from the collaboration. Consequently, these organizations may terminate their collaborations with us for a variety of reasons, including our failure to meet agreed-upon standards or for reasons beyond our control, such as changing market conditions, increased competition, discontinued product lines, and product obsolescence.

Our intellectual property and proprietary rights may be insufficient to protect our competitive position.

Our business depends on our ability to protect our intellectual property. We rely primarily on patent, copyright, trademark, trade secret laws, and other restrictions on disclosure to protect our proprietary technologies. We cannot be sure that these measures will provide meaningful protection for our proprietary technologies and processes. We cannot be sure that any patent issued to us will be sufficient to protect our technology. The failure of any patents to provide protection to our technology would make it easier for our competitors to offer similar products. In connection with our participation in the development of various industry standards, we may be required to license certain of our patents to other parties, including our competitors, that develop products based upon the adopted standards.

We also generally enter into confidentiality agreements with our employees, distributors, and strategic partners, and generally control access to our documentation and other proprietary information. Despite these precautions, it may be possible for a third-party to copy or otherwise obtain and use our products, services, or technology without authorization, develop similar technology independently, or design around our patents.

Effective copyright, trademark, and trade secret protection may be unavailable or limited in certain foreign countries. Furthermore, certain of our customers have entered into agreements with us which provide that the customers have the right to use our proprietary technology in the event we default in our contractual obligations, including product supply obligations, and fail to cure the default within a specified period of time.

(Table of Contents)

We may become subject to claims of intellectual property rights infringement, which could result in substantial liability.

In the course of operating our business, we may receive claims of intellectual property infringement or otherwise become aware of potentially relevant patents or other intellectual property rights held by other parties. Many of our competitors have large intellectual property portfolios, including patents that may cover technologies that are relevant to our business. In addition, many smaller companies, universities, and individuals have obtained or applied for patents in areas of technology that may relate to our business. The industry is moving towards aggressive assertion, licensing, and litigation of patents and other intellectual property rights. For example, in January 2007, the Washington Research Foundation filed a patent lawsuit against Nokia, Samsung, and Panasonic, alleging these wireless device makers of using infringing Bluetooth microprocessors in their products. Socket has not been named in the lawsuit, and we do not plan to make any changes to our current business at this time. The outcome of this lawsuit may result in future changes to our business.

If we are unable to obtain and maintain licenses on favorable terms for intellectual property rights required for the manufacture, sale, and use of our products, particularly those products which must comply with industry standard protocols and specifications to be commercially viable, our results of operations or financial condition could be adversely impacted.

In addition to disputes relating to the validity or alleged infringement of other parties' rights, we may become involved in disputes relating to our assertion of our own intellectual property rights. Whether we are defending the assertion of intellectual property rights against us or asserting our intellectual property rights against others, intellectual property litigation can be complex, costly, protracted, and highly disruptive to business operations by diverting the attention and energies of management and key technical personnel. Plaintiffs in intellectual property cases often seek injunctive relief, and the measures of damages in intellectual property litigation are complex and often subjective or uncertain. Thus, any adverse determinations in this type of litigation could subject us to significant liabilities and costs.

New industry standards may require us to redesign our products, which could substantially increase our operating expenses.

Standards for the form and functionality of our products are established by standards committees. These independent committees establish standards, which evolve and change over time, for different categories of our products. We must continue to identify and ensure compliance with evolving industry standards so that our products are interoperable and we remain competitive. Unanticipated changes in industry standards could render our products incompatible with products developed by major hardware manufacturers and software developers. Should any major changes, even if anticipated, occur, we would be required to invest significant time and resources to redesign our products to ensure compliance with relevant standards. If our products are not in compliance with prevailing industry standards for a significant period of time, we would miss opportunities to sell our products for use with new hardware components from mobile computer manufacturers and original equipment manufacturers, thus affecting our business.

(Table of Contents)**Undetected flaws and defects in our products may disrupt product sales and result in expensive and time-consuming remedial action.**

Our hardware and software products may contain undetected flaws, which may not be discovered until customers have used the products. From time to time, we may temporarily suspend or delay shipments or divert development resources from other projects to correct a particular product deficiency. Efforts to identify and correct errors and make design changes may be expensive and time consuming. Failure to discover product deficiencies in the future could delay product introductions or shipments, require us to recall previously shipped products to make design modifications, or cause unfavorable publicity, any of which could adversely affect our business and operating results.

Our quarterly operating results may fluctuate in future periods, which could cause our stock price to decline.

We expect to experience quarterly fluctuations in operating results in the future. We generally ship orders as received, and as a result we may have little backlog. Quarterly revenue and operating results therefore depend on the volume and timing of orders received during the quarter, which are difficult to forecast. Historically, we have often recognized a substantial portion of our revenue in the last month of the quarter. This subjects us to the risk that even modest delays in orders may adversely affect our quarterly operating results. Our operating results may also fluctuate due to factors such as:

- the demand for our products;
- the size and timing of customer orders;
- unanticipated delays or problems in our introduction of new products and product enhancements;
- the introduction of new products and product enhancements by our competitors;
- the timing of the introduction of new products that work with our connection products;
- changes in the proportion of revenues attributable to royalties and engineering development services;
- product mix;
- timing of software enhancements;
- changes in the level of operating expenses;
- competitive conditions in the industry including competitive pressures resulting in lower average selling prices; and
- timing of distributors' shipments to their customers.

Because we base our staffing and other operating expenses on anticipated revenue, delays in the receipt of orders can cause significant variations in operating results from quarter to quarter. As a result of any of the foregoing factors, or a combination, our results of operations in any given quarter may be below the expectations of public market analysts or investors, in which case the market price of our common stock would be adversely affected.

(Table of Contents)**The loss of one or more of our senior personnel could harm our existing business.**

A number of our officers and senior managers have been employed for ten to fourteen years by us, including our

President, Chief Financial Officer, Chief Technical Officer, Vice President of Marketing, and Senior Vice President for Business Development/General Manager Development Services. Our future success will depend upon the continued service of key officers and senior managers. Competition for officers and senior managers is intense, and there can be no assurance that we will be able to retain our existing senior personnel. The loss of one or more of our officers or key senior managers could adversely affect our ability to compete.

If we are unable to attract and retain highly skilled sales and marketing and product development personnel, our ability to develop new products and product enhancements will be adversely affected.

We believe our ability to achieve increased revenues and to develop successful new products and product enhancements will depend in part upon our ability to attract and retain highly skilled sales and marketing and product development personnel. Our products involve a number of new and evolving technologies, and we frequently need to apply these technologies to the unique requirements of mobile connection products. Our personnel must be familiar with both the technologies we support and the unique requirements of the products to which our products connect. Competition for such personnel is intense, and we may not be able to attract and retain such key personnel. In addition, our ability to hire and retain such key personnel will depend upon our ability to raise capital or achieve increased revenue levels to fund the costs associated with such key personnel. Failure to attract and retain such key personnel will adversely affect our ability to develop new products and product enhancements.

We may not be able to collect revenues from customers who experience financial difficulties.

Our accounts receivable are derived primarily from distributors and original equipment manufacturers. We perform ongoing credit evaluations of our customers' financial conditions but generally require no collateral from our customers. Reserves are maintained for potential credit losses, and such losses have historically been within such reserves. However, many of our customers may be thinly capitalized and may be prone to failure in adverse market conditions. Although our collection history has been good, from time to time a customer may not pay us because of financial difficulty, bankruptcy or liquidation.

We may be unable to manufacture our products, because we are dependent on a limited number of qualified suppliers for our components.

Several of our component parts, including our serial interface chip, our Ethernet chip, and our bar code scanning modules, and our new line of handheld computers, are produced by one or a limited number of suppliers. Shortages could occur in these essential components due to an interruption of supply or increased demand in the industry. If we are unable to procure certain component parts, we could be required to reduce our operations while we seek alternative sources for these components, which could have a material adverse effect on our financial results. To the extent that we acquire extra inventory stocks to protect against possible shortages, we would be exposed to additional risks associated with holding inventory, such as obsolescence, excess quantities, or loss.

(Table of Contents)

Our operating results could be harmed by economic, political, regulatory and other risks associated with export sales.

Export sales (sales to customers outside the United States) accounted for approximately 32 percent, 35 percent, and 37 percent, of our revenues in fiscal years 2006, 2005, and 2004, respectively. Accordingly, our operating results are subject to the risks inherent in export sales, including:

- longer payment cycles;
- unexpected changes in regulatory requirements, import and export restrictions and tariffs;
- difficulties in managing foreign operations;
- the burdens of complying with a variety of foreign laws;
- greater difficulty or delay in accounts receivable collection;
- potentially adverse tax consequences; and
- political and economic instability.

Our export sales are primarily denominated in United States dollars and in Euros for our sales to European distributors. Accordingly, an increase in the value of the United States dollar relative to foreign currencies could make our products more expensive and therefore potentially less competitive in foreign markets. Declines in the value of the Euro relative to the United States dollar may result in foreign currency losses relating to collection of Euro denominated receivables if left unhedged.

Our operations are vulnerable to interruption by fire, earthquake, power loss, telecommunications failure, and other events beyond our control.

Our corporate headquarters are located near an earthquake fault. The potential impact of a major earthquake on our facilities, infrastructure, and overall business is unknown. Additionally, we may experience electrical power blackouts or natural disasters that could interrupt our business. Should a disaster be widespread, such as a major earthquake, or result in the loss of key personnel, we may not be able to implement our disaster recovery plan in a timely manner. Any losses or damages incurred by us as a result of these events could have a material adverse effect on our business.

Failure to maintain effective internal controls could have a material adverse effect on our business, operating results and stock price.

We have evaluated and will continue to evaluate our internal control procedures in order to satisfy the requirements of Section 404 of the Sarbanes-Oxley Act, which requires an annual management assessment of the design and effectiveness of our internal controls over financial reporting. If we fail to maintain the adequacy of our internal controls, as such standards are modified, supplemented or amended from time to time, we may not be able to ensure that we can conclude on an ongoing basis that we have effective internal controls over financial reporting in accordance with Section 404 of the Sarbanes-Oxley Act. Moreover, effective internal controls, particularly those related to revenue recognition, are necessary for us to produce reliable financial reports and are important to helping prevent financial fraud. If we cannot provide reliable financial reports or prevent fraud, our business and operating results could be harmed, investors could lose confidence in our reported financial information, and the trading price of our stock could drop significantly.

(Table of Contents)

The sale of a substantial number of shares of common stock could cause the market price of our common stock to decline.

Sales of a substantial number of shares of our common stock in the public market could adversely affect the market price for our common stock. The market price of our common stock could also decline if one or more of our significant stockholders decided for any reason to sell substantial amounts of our common stock in the public market.

As of February 28, 2007, we had 31,883,886 shares of common stock outstanding. Substantially all of these shares are freely tradable in the public market, either without restriction or subject, in some cases, only to S-3 prospectus delivery requirements and, in other cases, only to manner of sale, volume, and notice requirements of Rule 144 under the Securities Act.

As of February 28, 2007, we had 9,440,364 shares subject to outstanding options under our stock option plans, and 1,484,994 shares were available for future issuance under the plans. We have registered the shares of common stock subject to outstanding options and reserved for issuance under our stock option plans. Accordingly, shares underlying vested options will be eligible for resale in the public market as soon as the options are exercised.

As of February 28, 2007, we had warrants outstanding to purchase a total of 989,712 shares of our common stock at exercise prices ranging from \$0.722 to \$2.73. All such warrants may be exercised at any time, and the shares issuable upon exercise may be resold, either without restrictions or subject, in some cases, only to S-3 prospectus delivery requirements, and, in some cases, only to manner of sale, volume, and notice requirements of Rule 144.

Volatility in the trading price of our common stock could negatively impact the price of our common stock.

During the period from January 1, 2005 through February 28, 2007, our common stock price fluctuated between a high of \$2.04 and a low of \$0.72. The trading price of our common stock could be subject to wide fluctuations in response to many factors, some of which are beyond our control, including general economic conditions and the outlook of securities analysts and investors on our industry. In addition, the stock markets in general, and the markets for high technology stocks in particular, have experienced high volatility that has often been unrelated to the operating performance of particular companies. These broad market fluctuations may adversely affect the trading price of our common stock.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

We lease a 37,000 square foot office facility in Newark, California under a lease expiring in May 2011. This facility houses our headquarters and manufacturing operations. We believe that our current facilities are sufficient and adequate to meet our needs for the foreseeable future.

(Table of Contents)

Item 3. Legal Proceedings

We are currently not a party to any material legal proceedings.

Item 4. Submission of Matters to a Vote of Security Holders

No matters were submitted for vote by security holders during the fourth quarter of 2006.

(Table of Contents)**Item 6. Selected Consolidated Financial Data**

The following selected consolidated financial data should be read in conjunction with Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations," and the consolidated financial statements and the notes thereto in Item 8, "Financial Statements and Supplementary Data."

(a) Operating expenses and the net loss applicable to common stockholders in 2006 includes stock compensation expense of \$1.1 million and \$1.2 million, respectively. On January 1, 2006, we adopted Financial Accounting Standard SFAS 123R, "Share-Based Payment." SFAS 123R requires the valuation of compensatory stock option grants and the expensing of the fair market value of these grants over the vesting period of the grants. Previous to fiscal 2006, we accounted for stock option grants to our employees and directors in accordance with Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees" (APB 25), and reported in accordance with the disclosure-only alternative described in SFAS 123, "Accounting for Stock-Based Compensation."

(Table of Contents)

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Critical Accounting Policies

Our significant accounting policies are described in Note 1 to our consolidated financial statements for the year ended December 31, 2006. The application of these policies requires us to make estimates and judgments that affect the reported amount of assets, liabilities, revenues and expenses, and related disclosure of contingent assets and liabilities. We base our estimates on a combination of historical experience and reasonable judgment applied to other facts. Actual results may differ from these estimates, and such differences may be material to the financial statements. In addition, the use of different assumptions or judgments may result in different estimates. We believe our critical accounting policies that are subject to these estimates are: Revenue Recognition and Accounts Receivable Reserves, Inventory Valuation, Valuation of Goodwill and Other Intangible Assets, and beginning on January 1, 2006, Valuation of Compensatory Stock Option Grants.

Revenue Recognition and Accounts Receivable Reserves

We defer revenue recognition on products sold to distributors until our distributors sell the products to their customers, because our distributors generally have rights to return products to us for stock rotation, stock reduction, or replacement of defective product. The amount of deferred revenue net of related cost of revenue is classified as

deferred income on shipments to distributors on our balance sheet. We use inventory reports received from our distributors at the end of each reporting period to determine the extent of inventory at the distributor, and thus, the amount of income to defer. Stock rotation and stock reduction from our distributors generally results in a balance sheet adjustment to our deferred income and does not impact our revenue or cost of revenue.

We generally recognize revenues on sales to customers other than distributors upon shipment provided that persuasive evidence of a sales arrangement exists, the price is fixed and determinable, title has transferred, collection of resulting receivables is reasonably assured, there are no customer acceptance requirements, and there are no remaining significant obligations. Most of our customers other than distributors do not have rights of return except under warranty.

We also earn revenues from services performed in connection with consulting arrangements. For those contracts that include contract milestones or acceptance criteria, we recognize revenues as such milestones are achieved or as such acceptance occurs. In some instances the acceptance criteria in the contract defers acceptance until all services are complete and all other elements have been delivered. In these cases, revenue recognition is deferred until those requirements are met.

We estimate the amount of uncollectible receivables at the end of each reporting period based on the aging of the receivable balance, historical trends, and communications with our customers. If actual bad debts are significantly different from our estimates our operating results will be affected.

(Table of Contents)

Inventory Valuation

Our inventories primarily consist of component parts used to assemble our products after we receive orders from our customers. We purchase or have manufactured the component parts required by our engineering bill of materials. The timing and quantity of our purchases are based on order forecasts, the lead time requirements of our vendors, and on economic order quantities. At the end of each reporting period, we compare our inventory on hand to our forecasted requirements for the next nine-month period, and write off the cost of any inventory that is surplus, less any amounts that we believe we can recover from disposal of goods that we specifically believe will be saleable past a nine-month horizon. Our sales forecasts are based upon historical trends, communications from customers, and marketing data regarding market trends and dynamics, which we discuss in Item 1, Business. Surplus or obsolete inventory can also be created by changes to our engineering bill of materials. Charges for the amounts we record as surplus or obsolete inventory are included in cost of revenue.

Goodwill and Other Intangible Assets

Our acquisition of the CompactFlash Bluetooth card business, including a product line and technology license, from Nokia Corporation in March 2002 and our acquisition of 3rd Rail Engineering in October 2000 added goodwill and intangible assets to our balance sheet. We allocated the purchase price of each based on an analysis of the fair market value of the assets we acquired. Beginning with the first quarter of 2002, in accordance with Statement of Financial Accounting Standards No. 142, "Goodwill and Other Intangible Assets," we ceased amortizing goodwill, and began to periodically evaluate whether the value of the goodwill was impaired, at which time any impaired balances would be written down. We periodically evaluate intangible and other long lived assets for potential impairment indicators. Our judgments regarding the existence of impairment indicators are based on legal factors, market conditions and operational performance of our acquired businesses. In addition, we also review the market capitalization of the

Company in conjunction with our analysis of goodwill impairment. As of December 31, 2006, in our judgment, there is no impairment of goodwill or intangible assets. Future events could cause us to conclude that impairment indicators exist and that goodwill and intangible assets associated with our acquired businesses are impaired. Any resulting impairment loss could have a material adverse impact on our financial condition and results of operations.

Valuation of Compensatory Stock Option Grants

On January 1, 2006, we adopted Financial Accounting Standard SFAS 123R, "Share-Based Payment," for the fiscal year ended December 31, 2006. SFAS 123R requires all share-based awards to employees, including grants of employee stock options, to be recognized in the financial statements based on their fair values. Previously, we accounted for stock option grants to our employees and directors in accordance with Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees" (APB 25) using a Black-Scholes formula, and reported in accordance with the disclosure-only alternative described in SFAS 123, "Accounting for Stock-Based Compensation." The valuation provisions of SFAS 123R apply to new grants and to grants that were outstanding as of the effective date. Under SFAS 123R, the Company uses a binomial lattice valuation model to estimate fair value of stock option grants made on or after January 1, 2006. The binomial lattice model incorporates estimates for expected volatility, risk-free interest rates, employee exercise patterns and post-vesting employment termination behavior, and these estimates will affect the calculation of the fair value of the Company's stock option grants. The fair value of stock option grants outstanding as of the effective date is estimated using the Black-Scholes option pricing model used under SFAS 123. The Company adopted the modified prospective recognition method and implemented the provisions of SFAS 123R beginning with the first quarter of 2006.

(Table of Contents)

Overview of our Business

We are a producer of mobile systems serving the business market. Mobile systems solutions typically consist of a handheld computer, data collection and connectivity peripherals, and third-party vertical applications software. We have historically offered a wide range of data collection and connectivity peripheral products and embedded products for use with mobile computing devices offered by third-parties. We have announced plans to offer a family of handheld computers with the first product scheduled to ship in the second quarter of 2007. Our data collection and connectivity peripheral products are used with handheld computers, tablet computers, notebook computers and smartphones that use Windows Mobile, Windows XP, Windows Tablet, Palm, J2ME, or Symbian 60 or 80 operating systems. The guiding principles that we follow in developing products for the mobile computing market are standard form factors, low battery power consumption, ease of use, interoperability and quality. We sell both Socket-branded and OEM products. We distribute our Socket-branded products through worldwide general distribution channels, and sell our OEM products directly to OEMs. Sixty-eight percent of our products were sold in the United States and thirty-two percent sold in Europe and Asia during 2006.

Our focus has been on developing products for the enterprise market that drive operational efficiency and increase mobile workforce productivity. Our products are usually part of an enterprise solution created by third-parties incorporating a handheld device and applications software, and thus our sales have been dependent upon customers selecting a handheld device, choosing or developing their applications, and testing the solutions. Overall revenues in 2006 were negatively affected by several events in our marketplace. The introduction of an operating system upgrade, Windows Mobile 5.0, announced in September 2005 by the major PDA manufacturers, slowed customer deployments through 2006, as third-party applications were modified and tested with the new operating system. In addition, the transition to lead-free products in the second quarter of 2006 to comply with the Reduction of Hazardous Substances

(RoHS) rules implemented in Europe and around the world, limited the availability of units by the major PDA manufacturers until late in the second quarter of 2006. Lastly, we experienced a marked reduction in handheld computer deployments by a key North American channel partner, which affected sales levels of our products in the third and fourth quarters of 2006. These types of transitions have affected our business from time to time and will continue to do so in the future. In response to these market conditions, we have announced our plans to offer a family of mobile handheld computers with the first product scheduled to ship in the second quarter of 2007.

We work closely with handheld computing device manufacturers to ensure interoperability between our products and their handheld devices, and we have developed software developer kits to aid and encourage applications software developers to integrate our products into their applications. Our software developer kits cover data collection, RFID, Bluetooth and wireless local area networks (referred to as Wi-Fi or wireless LAN). We further support applications development through our Vertical Industry Partners (VIP) Program. VIPs include value added resellers or third-party software application developers who integrate our products into their software solutions. We are currently working with more than 100 software integration companies that are offering vertical application software for use with our products, addressing vertical markets such as patient medication administration, retail merchandising, field and sales force automation, and asset management.

(Table of Contents)

Our products include data collection products and connectivity products, which together comprise our mobile peripheral products category. Additional product categories include our OEM embedded products, and our serial products. Beginning in 2007 we have added a handheld computer products category.

Our data collection products, which accounted for 42 percent of our revenues in 2006, includes plug-in bar code scanners, cordless bar code scanners, plug-in Radio Frequency Identification (RFID) reader-writers, combination plug-in bar code scanner and RFID reader, and a plug-in magnetic stripe reader. Our bar code scanning products include CompactFlash and SDIO plug-in bar code scanners for linear and two-dimensional bar code scanning, along with a cordless handheld bar code scanner and a ring scanner worn on the index finger, both of which connect to computing systems using the Bluetooth standard for short-range wireless connectivity. We have developed extensive bar code scanning software called SocketScan that supports all of our data collection products, and have software developer kits that assist third-party developers in integrating our SocketScan software and our hardware products into their applications and solutions. Our products incorporate laser and imager technology using bar code scanning engines primarily from Motorola (formerly Symbol Technologies) and Hand Held Products. Most of the vertical applications being developed by our VIPs are for mobile data collection solutions using bar code scanning or RFID.

Our connectivity products, which accounted for 27 percent of our revenues in 2006, consists of plug-in and cordless products that enable users to connect their devices to the Internet via mobile or wired phone services, or to private networks, or to communicate with other electronic devices such as desktop computers, other handheld, tablet and notebook computers, smartphones and printers. The principle products in this category include plug-in cards using Bluetooth technology, plug-in Wireless LAN cards, plug-in modem cards and cordless modems enabled with Bluetooth technology, and plug in Ethernet cards. We differentiate our products through features in our Bluetooth and Wireless LAN software, including extensive communications software enabling the use of these products.

Our OEM products, which accounted for 21 percent of our revenues in 2006, consists of Bluetooth modules and plug-in cards used by Original Equipment Manufacturers (OEMs). Beginning in late 2006 we began offering our Wireless LAN modules. Our Bluetooth and Wireless LAN modules allow manufacturers of handheld computers and other devices to build wireless connection functions into their products using the Bluetooth and Wireless LAN

standards for wireless connectivity. Historically, we offered for sale our proprietary ASIC interface chips, that we use in our own products, which allowed manufacturers of wide area network cards and other devices to transfer information to and from handheld or notebook computers.

Our serial product family, which accounted for 10 percent of our revenues in 2006, is a legacy business that we introduced in 1993 and is primarily focused on connecting notebook computers to networks and to other systems. We extended our serial product family life several years ago by adding a Bluetooth-enabled serial product. We expect serial product family revenue to continue to decline as a percentage of our revenue, as the use of alternative connection technologies such as USB increase.

(Table of Contents)

We have a leveraged business model in both manufacturing and distribution that is designed to allow the benefits of revenue growth to benefit our operating results. Most of our major product components are manufactured to our specifications by third-party contract manufacturers, and we handle final product assembly, testing and distribution. This arrangement allows us to expand volume production without a corresponding need to invest in additional manufacturing equipment or manufacturing personnel, and increases in the volumes of products we have our suppliers manufacture tends to reduce the unit costs they charge us, as the costs of production startup are spread over more units. We distributed 77 percent of our products (all but our OEM products) during 2006 through worldwide general distribution channels. We have in place the infrastructure to manage our distribution channels and are capable of increasing the volume of business in these channels with our current resources.

We price our products towards the customer who is looking for a dependable, robust product, not necessarily the most inexpensive, and we have typically achieved gross margins around 50 percent. We believe that our products that face the most competition are our connectivity products, which tend to have lower product margins than our data collection, OEM and serial products. As a result, our margins are affected by product sales mix. We will also provide customer discounts for volume orders; thus order size can affect our margins. Inventory charges such as reserves for excess and obsolete inventory are also charged to cost of sales and can impact our margins.

Our largest operating cost, more than 50 percent of our operating costs in 2006, was the cost of our personnel. We adopted SFAS 123R beginning January 1, 2006 and began recognizing stock-based compensation expense, which added \$1.2 million of personnel expense in 2006. Additional increases in personnel costs in 2006 were primarily related to research and development and operations to support product development programs. Most of our senior employees have a variable portion of their compensation based on achieving financial and operating goals and objectives. In 2006, our revenues were below our financial goals, which reduced the total variable personnel compensation we paid, partially offsetting other increases in personnel expenses. Total personnel costs, including the costs of personnel in operations that are charged to cost of sales, increased by 25 percent in 2006 over 2005, and of this increase 16 percent was related to stock-based compensation. Research and development expenses from the purchases of equipment, tooling, outside services, and consulting and professional fees, were related to product development programs including our new family of handheld computers, resulting in an increase of \$1.1 million of research and development expenses in 2006 compared to 2005. Advertising, promotional, and sales and marketing travel expense was approximately 11 percent of our operating costs in 2006, compared to 13 percent in 2005. As a result, our total operating expenses in 2006 were approximately \$2.3 million, or 18 percent, higher in 2006 compared to 2005.

Our balance sheet at December 31, 2006 included \$6.1 million in cash, a current ratio (current assets divided by current liabilities) of 1.6 to 1.0, and no long-term debt. We used \$0.4 million in cash from operations in 2006, of

which \$0.4 million in cash provided was related to working capital changes, including reductions in receivables and increases in deferred income. We managed our inventory levels in 2006, keeping increases at December 31, 2006 to less than \$0.2 million from the preceding year-end. Beginning in the third quarter of 2006, we experienced a reduction in handheld computer deployments by a key North American channel partner, which affected sales levels of our products in the third and fourth quarters of fiscal 2006. In the fourth quarter of 2006 sales of our Bluetooth modules declined due to our customers experiencing increased competition in the industrial ruggedized PDA market segment. The slow down of enterprise deployments combined with lower sales of our Bluetooth modules in the fourth quarter reduced end-of-quarter sales and related receivables, the result of which was our receivables at December 31, 2006 were \$0.3 million lower than at the preceding year-end. Additionally, warrants and options exercised in 2006 resulted in a source of cash of \$0.6 million.

(Table of Contents)

We have an experienced management team with five of our eight officers having served the Company for more than twelve years, and the remaining officers having served at least four years. We believe we comply with the standards for good corporate governance. In the three years ended December 31, 2006, we were subject to the audit requirement of our internal controls over financial reporting for the 2005 and 2004 years only, and we received an unqualified opinion on our internal controls in each of those years. In 2006 we were not subject to an audit requirement of our internal controls over financial reporting.

The challenges we face in 2006 are typical for technology companies. We are responding to competitive products and new and improved technologies by continuing to improve our products and by introducing new products, including our family of mobile handheld computers, in response to the needs of our VIP partners, the demands of the markets that we serve, and the opportunities presented by developing technologies. With the growing worldwide mobile workforce, advancements in mobile technologies and the development of vertical applications software by us and our VIP partners, our objective is to enable continued improvements and expansion in enterprise mobile workforce productivity.

Revenue

Total revenues in 2006 and 2005 were \$25.0 million in each year. Revenues in 2005 decreased four percent from 2004 revenues of \$26.1 million.

Our products include data collection products and connectivity products, which together comprise our mobile peripheral products category. Additional product categories include our OEM embedded products, and our serial products. Beginning in 2007 we have added a handheld computer products category. Our revenues for the 2006, 2005, and 2004 periods presented have been classified as follows:

- Our *data collection products* enable the electronic collection of data from bar codes, RFID tags, or magnetic stripes and consist of:
 - bar code scanning products that plug into or connect wirelessly to handheld computers, tablet computers, notebook computers and smartphones that use Windows Mobile, Windows XP, Windows Tablet, J2ME, or Symbian 60 or Symbian 80 operating systems, and turn these devices into portable bar code scanners that can be used in various retail and industrial workplaces;
 - Radio Frequency Identification (RFID) plug-in products that read RFID tags;
 - a combination plug-in bar code scanner and RFID reader; and
 - a plug-in magnetic stripe reader.

We have developed extensive bar code scanning software called SocketScan that supports all of our data collection products, and have software developer kits that assist third-party developers in integrating our SocketScan software and our hardware products into their applications and solutions. Our bar code scanning products include CompactFlash and SDIO plug-in bar code scanners for linear and two-dimensional bar code scanning, along with a cordless handheld bar code scanner and a ring scanner worn on the index finger, both of which connect to computing systems using the Bluetooth standard for short-range wireless connectivity. Data collection products represented approximately 42 percent, 39 percent, and 40 percent of our revenue for the years ended December 31, 2006, 2005, and 2004, respectively.

(Table of Contents)

- Our *connectivity products* are connection devices that can either be plugged into standard expansion slots in handheld computers, tablet computers, notebook computers and smartphones that use Windows Mobile, Windows XP, Windows Tablet, or Palm operating systems, or connect to these devices over wireless and wired connections. These products allow users to connect their devices to the Internet via mobile or wired phone services, or to private networks, or to communicate with other electronic devices such as desktop computers, other handheld, tablet and notebook computers, smartphones and printers. Our connectivity products include:
 - plug-in cards using the Bluetooth standard for short-range wireless connectivity, along with extensive communications software enabling the use of these products;
 - plug-in cards for connecting to local wireless networks using the Wireless LAN 802.11b/g (or Wi-Fi) standards along with extensive communications software enabling the use of these products.
 - Modems for telephone connections that connect over a cable, and cordless modems that utilize Bluetooth wireless technology to connect a telephone to a Bluetooth-enabled computer or other device; and
 - Ethernet cards for local area network connections that connect over a cable.

Bluetooth and wireless LAN connection functions are being built into many mobile devices which may reduce the demand for these categories of our plug-in products but may increase the demand for our stand-alone Bluetooth products that work with other Bluetooth-enabled devices. Connectivity products represented approximately 27 percent, 34 percent, and 32 percent of our revenue for the years ended December 31, 2006, 2005, and 2004, respectively.

- Our *OEM embedded products* consist of Bluetooth and Wireless LAN modules and plug-in cards used by Original Equipment Manufacturers (OEMs) of handheld computers and other devices to build wireless connection functions into their products using the Bluetooth and Wireless LAN standards for wireless connectivity. Historically, we offered for sale our proprietary ASIC interface chips which allowed manufacturers of wide area network cards and other devices to transfer information to and from handheld or notebook computers. Embedded products represented approximately 21 percent, 14 percent, and 14 percent of our revenue for the years ended December 31, 2006, 2005, and 2004, respectively.
- Our *serial card products* enable the connection of a mobile computer to another electronic device either as a plug-in card connecting over cables or wirelessly over a Bluetooth network. Serial products represented approximately 10 percent, 13 percent, and 14 percent of our revenue for the years ended December 31, 2006, 2005, and 2004, respectively.

(Table of Contents)

Our *data collection product* revenues in 2006 were \$10.4 million compared to revenue of \$9.6 million in 2005, and \$10.4 million in 2004. Revenue increases in 2006 of \$0.8 million in sales of our Cordless Hand Scanner, and increases of \$0.4 million in sales of our Cordless Ring Scanner which began shipping in the fourth quarter of 2005, were partially offset by declines in sales of our SDIO In-Hand Scan card, declines in our In-Hand Scan Imager card, and declines in our primary scanning product, the CompactFlash In-Hand Scan card. Data collection revenues in 2006 were slowed by the introduction of an operating system upgrade, Windows Mobile 5.0, announced in September 2005 by the major PDA manufacturers, which slowed customer deployments through 2006, as third-party applications were modified and tested with the operating system. Transition to lead-free products in the second quarter of 2006 to comply with the Reduction of Hazardous Substances (RoHS) rules implemented in Europe and around the world, limited the availability of units by the major PDA manufacturers until late in the second quarter of 2006. Third quarter of 2006 was adversely affected by a marked reduction in deployments by a key North American channel partner. Revenue declines in 2005 of \$1.0 million were from our CompactFlash In-Hand Scan card, declines of \$0.7 million from our bar code laser scanner system, and declines of \$0.5 million in sales of our SDIO In-Hand Scan card. Partially offsetting these declines was growth of \$1.4 million from our Cordless Hand Scanner and slight increases in sales of our In-Hand Scan Imager. Our data collection revenues in 2005 were affected by the transitions to new models by the major PDA manufacturers begun in the latter half of 2004, which were not fully resolved until late in the second quarter of 2005. In addition, the introduction of an operating system upgrade, Windows Mobile 5.0, announced in September 2005, slowed sales in the fourth quarter of 2005. Our scanning products are sold both through general distribution and through value added resellers who contract with customers to provide scanning solutions.

Our *connectivity product* revenues in 2006 were \$6.9 million compared to \$8.5 million in 2005, and \$8.3 million in 2004. Revenue declines in 2006 were from declines of \$0.8 million in sales of Cordless GPS receiver with navigation kit which was discontinued, and declines of \$0.2 million each in our Ethernet plug-in products, Bluetooth plug-in products, Modem plug-in products, and Wireless LAN plug-in products. Revenues from our accessory products, including our Mobile Power Pack, were flat in 2006 compared to 2005. Connectivity revenues in 2006 were slowed by the introduction of an operating system upgrade, Windows Mobile 5.0, announced in September 2005 by the major PDA manufacturers, which slowed customer deployments in 2006 as third-party applications were modified and tested with the operating system. Transition to lead-free products in the second quarter of 2006 to comply with the Reduction of Hazardous Substances (RoHS) rules implemented in Europe and around the world, limited the availability of units by the major PDA manufacturers until late in the second quarter of 2006. Third quarter of 2006 was adversely affected by a marked reduction in handheld computer deployments by a key North American channel partner. Revenue increases in 2005 of \$0.4 million in our Modem plug-in products, increases of \$0.4 million in our Ethernet plug-in products, and increases of \$0.2 million in our accessory products, including our Mobile Power Pack, were partially offset by declines of \$0.3 million in sales of our Wireless LAN plug-in cards, declines of \$0.2 million in sales of our Bluetooth plug-in products, and slight declines in sales of our Cordless GPS receiver with navigation kit. Our connectivity revenues in 2005 were negatively affected though the first half of 2005 by the transitions to new models by the major PDA manufacturers begun in the latter half of 2004, which were not fully resolved until late in the second quarter of 2005. In addition, the introduction of an operating system upgrade, Windows Mobile 5.0, announced in September 2005 slowed sales in the fourth quarter of 2005.

(Table of Contents)

Our *OEM embedded product* revenues in 2006 were \$5.2 million compared to \$3.4 million in 2005, and \$3.7 million

in 2004. Revenue growth in 2006 of \$1.9 million from sales of our Bluetooth modules was due to increased manufacturing volumes of industrial ruggedized PDAs by our customers during the first three quarters of 2006. In the fourth quarter of 2006 sales levels of our Bluetooth modules declined due to increased competition our customers experienced in the industrial ruggedized market segment during the fourth quarter. Partially offsetting the overall increased Bluetooth module sales were declines in sales of our embedded Bluetooth cards and declines in sales of our proprietary ASIC chip due to customers choosing higher speed alternative ASIC solutions beginning in the latter half of 2005. We do not anticipate material levels of chip sales beyond fiscal 2006. Revenue declines in 2005 of \$0.8 million in our proprietary ASIC chip as customers began choosing alternative ASIC solutions, and declines of \$0.1 million in engineering service revenues, were partially offset by increases of \$0.6 million in sales of our Bluetooth modules due to higher order levels by customers delivering new products. Sales of our embedded Bluetooth cards were flat in 2005 compared to 2004.

Our *serial product* revenues in 2006 were \$2.5 million compared to \$3.3 million in 2005, and \$3.7 million in 2004. Revenue declines of \$0.7 million in 2006 and \$0.5 million in 2005 were from reduced sales of our standard serial PC Card products. Our standard peripheral connection cards are primarily sold to connect peripheral devices or other electronic equipment to notebook computers. Additional declines in 2006 were from lower sales of our CompactFlash Card product compared to relatively flat sales of this product in 2005. Partially offsetting revenue declines in 2005 were increased sales of our cordless Bluetooth serial adapter. Overall serial product revenues have declined in fiscal 2006 from 2005 levels, continuing a trend reflecting the gradual replacement of serial technology with USB and other newer connection technologies.

Gross Margins

Gross margins for 2006 were 49 percent of revenues compared to gross margins of 50 percent in 2005, and 51 percent in 2004. Margin reductions in 2006 are due to a product mix reflecting growth in products with lower than average margins and reductions in products with higher than average margins. Additional impacts on margins in 2006 are related to higher accruals for inventory reserves compared to 2005, reflecting estimates for excess non-RoHS compliant inventories. We generally price our products as a markup from our cost, and we offer discount pricing for higher volume purchases. Our average target gross margin historically has been 50 percent, and we expect the gross margin to fluctuate within a range of that target.

Research and Development Expense

Research and development expense in 2006 was \$5.1 million, an increase of 46 percent from research and development expense in 2005 of \$3.5 million. Research and development expense in 2005 decreased by 4 percent from research and development expense in 2004 of \$3.7 million. Personnel costs increased by \$0.6 million in 2006, of which approximately half was related to the recognition of stock-based compensation expense resulting from the adoption and implementation of SFAS 123R beginning January 1, 2006. Additional increases were from increased equipment costs, outside services, and consulting and professional fees reflecting increased development activities, of which \$0.3 million is attributable to the initial costs of the development of our mobile handheld computer. Reductions in 2005 were primarily attributable to reduced consulting and professional fees and outside services related to the timing of development projects.

Sales and marketing expense in 2006 was \$7.1 million, an increase of 8 percent compared to sales and marketing expense in 2005 of \$6.6 million. Sales and marketing expense in 2005 increased by 11 percent compared to sales and marketing expense in 2004 of \$5.9 million. Increases in personnel costs of \$0.5 million in 2006 were primarily from stock-based compensation expense resulting from the adoption and implementation of SFAS 123R beginning January 1, 2006. Slight increases in equipment costs and consulting and professional fees, were partially offset by reductions in outside services and advertising and promotion. Increases of \$0.4 million in 2005 were from increased personnel costs related to staffing key sales and marketing positions, and increases of \$0.3 million were from higher levels of advertising and promotion, and travel related expenses.

General and Administrative Expense

General and administrative expense in 2006 was \$2.7 million, an increase of 6 percent compared to general and administrative expense in 2005 of \$2.5 million. General and administrative expense in 2005 decreased by 17 percent compared to general and administrative expense in 2004 of \$3.1 million. Increases in personnel costs of \$0.4 million in 2006 were primarily from stock-based compensation expense recognized in 2006 resulting from the adoption and implementation of SFAS 123R beginning January 1, 2006. Partially offsetting these increases were reduced professional fees in 2006 related to Sarbanes-Oxley compliance requirements incurred in 2005, and reduced business insurance costs compared to 2005. Decreases of \$0.6 million in 2005 were due to reduced legal and professional fees related to the patent infringement complaint by Khyber Technologies Corporation, which was settled in the beginning of the third quarter of 2004. Additional decreases of \$0.2 million from reduced facility costs and business insurance costs were offset by increases in professional fees related primarily to Sarbanes-Oxley compliance requirements completed in the first quarter of 2005.

Amortization of Intangibles

In July 2004 we acquired a patent which covers the design and functioning of plug-in bar code scanners, bar code imagers and RFID products. The patent was purchased for \$600,000 and has been capitalized as an intangible asset. The patent is being amortized on a straight line basis over a ten year period. Intangible assets of \$570,750 remaining from a prior acquisition in 2000 consist of developed software and technology with estimated lives at the time of acquisition of 8.5 years. At December 31, 2004, a licensing agreement with a book value of \$38,000 was reclassified as an intangible asset and is being amortized over its remaining life of three years. During the first quarter of 2002, we acquired intangible assets in conjunction with the acquisition of Nokia's CompactFlash Bluetooth Card business and related product line technology valued at \$980,000. Estimated useful lives of the acquired assets at the time of acquisition ranged from one to three years. At March 31, 2005, all components of the acquired Nokia intangibles were fully amortized. Total amortization charges in 2006 for all acquired intangibles were \$140,000, compared to \$203,000 in 2005, and \$397,000 in 2004. The lower amortization charges in 2006 are due to components of intangible property becoming fully amortized.

(Table of Contents)

Interest Income and Other, and Interest Expense

Interest income reflects interest earned on cash balances. Interest income was \$175,000 in 2006, \$92,000 in 2005, and \$37,000 in 2004. Higher levels of interest income in 2006 and 2005, compared to 2005 and 2004, respectively, reflects higher average levels of cash on hand combined with higher rates of return compared to the respective prior periods. Higher levels of cash on hand in 2006 compared to 2005 were primarily from the exercise of Series E and Series F warrants totaling \$0.6 million, and changes in working capital balances resulting in a source of cash of \$0.3 million. Higher levels of cash on hand in 2005 compared to 2004 were primarily from changes in working capital balances resulting in a source of cash of \$1.5 million.

Interest expense was \$7,800 in 2006, \$5,000 in 2005, and \$8,200 in 2004. Interest expense is related to interest on amounts drawn on our bank lines of credit and interest on equipment lease financing obligations, and additionally in 2004 from interest on the outstanding note payable to Nokia. We used our bank lines of credit only at the end of each quarter in each of the years presented. Higher interest expense in 2006 is due to higher interest rates on our lines of credit in 2006 compared to 2005. Lower interest expense in 2005 compared to 2004 reflects the repayment of the note payable to Nokia in April 2004.

Income Taxes

We account for income taxes in accordance with Statement of Financial Accounting Standards No. 109, "Accounting for Income Taxes" ("SFAS 109"). Under SFAS 109, deferred tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities and are measured using enacted tax rates and laws that will be in effect when the differences are expected to reverse. We record a valuation allowance against deferred tax assets when it is more likely than not that such assets will not be realized. We have not generated taxable income in any periods in any jurisdiction, foreign or domestic. The Company has maintained a full valuation allowance for all deferred tax assets. There can be no assurance that the deferred tax assets subject to the valuation allowance will be realized.

Preferred Stock Dividends

Preferred stock dividends of \$11,000 in 2006, \$48,000 in 2005 and \$50,000 in 2004, reflect dividends accrued at the rate of 8% per annum on Series F Preferred Stock issued in March 2003. Series F dividends were payable quarterly in cash or in common stock, at the option of the Company. Dividends in 2006 reflect dividends on Series F Preferred Stock up through the date of mandatory conversion in the first quarter 2006, and were paid prior to the end of the first quarter. On March 21, 2006 the outstanding shares of Series F Preferred Stock automatically converted into common stock resulting in the issuance of 823,300 shares of common stock. Dividends for Series F Preferred Stock were paid in cash subsequent to the end of each of the quarters in 2005 and 2004.

(Table of Contents)

Quarterly Results of Operations

The following table sets forth summary quarterly statements of operations data for each of the quarters in 2005 and 2006. This unaudited quarterly information has been prepared on the same basis as the annual information presented elsewhere herein, and, in our opinion, includes all adjustments (consisting only of normal recurring entries) necessary for a fair presentation of the information for the quarters presented. The operating results for any quarter are not necessarily indicative of results for any future period.

(Amounts in thousands, except per share amounts)	Quarter Ended							
	Mar 31, 2005	Jun 30, 2005	Sep 30, 2005	Dec 31, 2005	Mar 31, 2006	Jun 30, 2006	Sep 30, 2006	Dec 31, 2006
Summary Quarterly Data:								
Revenue	\$ 5,982	\$ 6,580	\$ 6,548	\$ 5,924	\$ 6,759	\$ 6,855	\$ 5,974	\$ 5,393

Interest income (expense), net	12	17	26	32	34	48	46	39
Deferred tax expense	---	---	---	---	---	---	---	(150)
Net income (loss)	(392)	258	207	(240)	(369)	(448)	(838)	(1,257)
Preferred stock dividends	(12)	(12)	(12)	(12)	(11)	---	---	---
Net income (loss) applicable to common stockholders	\$ (404)	\$ 246	\$ 195	\$ (252)	\$ (380)	\$ (448)	\$ (838)	\$ (1,257)
Basic and diluted net income (loss) per share applicable to common stockholders	\$ (0.01)	\$ 0.01	\$ 0.01	\$ (0.01)	\$ (0.01)	\$ (0.01)	\$ (0.03)	\$ (0.04)

We have experienced significant quarterly fluctuations in operating results, and we anticipate such fluctuations to continue in the future. We generally ship orders as received and therefore quarterly revenue and operating results depend on the volume and timing of orders received during the quarter, which are difficult to forecast. Historically, we have recognized a substantial portion of our revenue in the last month of the quarter. Operating results may also fluctuate due to factors such as the demand for our products, the size and timing of customer orders, the introduction of new products and product enhancements by ourselves or our competitors, product mix, timing of software enhancements, changes in the level of operating expenses, and competitive conditions in the industry. Because our staffing and other operating expenses are based on anticipated revenue, a substantial portion of which is not typically generated until the end of each quarter, delays in the receipt of orders can cause significant variations in operating results from quarter to quarter.

Liquidity and Capital Resources

We were unprofitable in fiscal 2006 due in part to the negative impact of the adoption of SFAS 123R on January 1, 2006, which does not require the use of cash. We were profitable in two of the quarters in fiscal year 2005, but unprofitable for fiscal year 2005. Fiscal year 2004 was our first profitable year in our history. Historically we have financed our operations through the sale of equity securities, equipment financing, and revolving bank lines of credit. Since our inception, we have raised approximately \$51 million in equity capital. Prior to the first quarter of 2004, we incurred significant quarterly and annual operating losses in every fiscal period. We may continue to be unprofitable in the future.

(Table of Contents)

Cash used in operating activities was \$0.4 million in 2006 compared to cash provided by operating activities of \$2.2 million in 2005, and cash used in operating activities of \$0.6 million in 2004. Cash used in 2006 from our net loss adjusted for non-cash items was \$0.8 million, compared to cash provided from our net income adjusted for non-cash items resulting in \$0.5 million in 2005 and \$1.3 million in 2004. Adjustments for non-cash items, including depreciation and amortization, amortization of intangibles, gains and losses on foreign currency transactions, changes in deferred rent, deferred tax expense, and beginning January 1, 2006, stock-based compensation, totaled \$2.1 million in 2006, compared to \$0.7 million in 2005, and \$0.9 million in 2004. Changes in working capital balances resulted in a source of cash of \$0.4 million in 2006 and \$1.7 million in 2005, and a use of cash of \$1.9 million in 2004. Changes in working capital balances in 2006 were primarily from increases in deferred revenues due to increased inventory levels in our distribution channel, and reductions in accounts receivables due to lower shipments in the fourth quarter,

partially offset by decreases accounts payables and increases in inventory and other assets. Changes in working capital balances in 2005 were primarily from decreases in receivables due to early collections from key distributors, and reductions in levels of inventory, partially offset by increases in prepaid assets and decreases in payables. Changes in working capital balances during 2004 reflect increases in inventory stock and accounts receivable to meet higher overall levels of shipping and billing compared to 2003, and reductions in accounts payable partially offset by increases in deferred revenue from growth in our international distribution channel.

Cash used in investing activities was \$0.8 million in 2006, \$0.6 million in 2005, and \$1.0 million in 2004. Investing activities in 2006 and 2005 reflect the costs of new computer hardware and software, and tooling costs. Investing activities in 2004 primarily reflect the purchase costs of the Khyber patent of \$0.6 million in July 2004. Additional investing activities in 2004 reflect the costs of new computer hardware and software, and tooling costs.

Cash provided by financing activities was \$0.5 million in 2006 compared to cash used in financing activities of \$0.6 million in 2005, and cash provided by financing activities of \$1.0 million in 2004. Financing activities in 2006 consisted primarily of proceeds totaling \$0.6 million from the exercise of warrants and stock options, partially offset by a net decrease in the amounts drawn on our bank lines of credit, and the final dividend payments on Series F Preferred Stock. At the end of 2006 we drew \$2.2 million in cash against our bank credit line, which we repaid in January 2007. Financing activities in 2005 consist primarily of \$0.6 million used to decrease the amounts drawn on our bank line of credit at the end of 2005 compared to the end of 2004. Payments of cash dividends and payments on capital leases totaling \$0.1 million were offset by proceeds from the exercise of stock options. At the end of 2005 we drew \$2.3 million in cash against our bank credit line, which we repaid in January 2006. Financing activities in 2004 consist of \$1.4 million from the net increase in the amounts drawn on our bank lines of credit and proceeds of \$0.1 million from the exercise of stock options and warrants, partially offset by payments of \$0.5 million on the note payable to Nokia. In April 2004 the Company made the final payment on the note payable to Nokia. At the end of 2004 we drew \$2.9 million in cash against our bank credit line, which we repaid in January 2005.

(Table of Contents)

Our cash balances at December 31, 2006 were \$6.1 million, including cash of \$2.2 million drawn against our bank line of credit. In March 2006, we extended our bank line of credit agreement which will now expire on March 2, 2008. We have warrants outstanding from our private placement financings and outstanding employee stock options that, if exercised, would further increase our cash and equity balances. We believe our existing cash, plus our ability to reduce costs, and our bank line will be sufficient to meet our funding requirements at least through December 31, 2007. If we can return to profitability and revenue growth, we anticipate requirements for cash will include funding of higher receivable and inventory balances, and increasing expenses, including more employees to support our growth and increases in salaries, benefits, and related support costs for employees. If we cannot return to profitability, we will not be able to support our operations from positive cash flows, and we would use our existing cash to support operating losses. Should the need arise, we cannot assure you that additional capital will be available on acceptable terms, if at all, and any such terms may be dilutive to existing stockholders. Although we do not anticipate the need to raise additional capital at this time to fund our operations, we may raise additional capital if market conditions are appropriate.

Our contractual obligations at December 31, 2006 are outlined in the table below:

Contractual Obligations	Total	Payments Due by Period			
		Less than 1 year	1 to 3 years	4 to 5 years	More than 5 years

Capital leases	\$	8,400	\$	8,400	\$	---	\$	---	\$	---
Operating leases		1,771,600		191,000		1,049,500		531,100		---
Unconditional purchase obligations with contract manufacturers	 	1,497,800	 	1,497,800	 	---	 	---	 	---
Total contractual cash obligations	\$	3,277,800	\$	1,697,200	\$	1,049,500	\$	531,100	\$	---
Off-Balance Sheet Arrangements										

As of December 31, 2006, we have no off-balance sheet arrangements as defined in Item 303 of Regulation S-K.

Recent Accounting Pronouncements

In June 2006, the Financial Accounting Standards Board issued Interpretation No. 48, "Accounting for Uncertainty in Income Taxes - An Interpretation of FASB Statement No. 109" ("FIN 48"), to create a single model to address accounting for uncertainty in tax positions. FIN 48 clarifies the accounting for income taxes by prescribing a minimum recognition threshold a tax position is required to meet before being recognized in the financial statements. FIN 48 also provides guidance on derecognition, measurement, classification, interest and penalties, accounting in interim periods, disclosure and transition. FIN 48 is effective for fiscal years beginning after December 15, 2006. The Company adopted FIN 48 as of January 1, 2007, as required. The cumulative effect of adopting FIN 48 will be recorded in retained earnings and other accounts as applicable. The Company has determined that the adoption of FIN 48 will not have a material affect on the Company's financial position and consolidated results of operations or cash flows.

(Table of Contents)

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

Interest Rate Risk

Our exposure to market risk for changes in interest rates relates primarily to invested cash. Our cash is invested in short-term money market investments backed by U.S. Treasury notes and other investments that mature within one year and whose principal is not subject to market rate fluctuations. Accordingly, interest rate declines would adversely affect our interest income but would not affect the carrying value of our cash investments. Based on a sensitivity analysis of our cash investments during the quarter ended December 31, 2006, a decline of 1% in interest rates would reduce our quarterly interest income by approximately \$9,700.

Our bank credit line facilities of up to \$4.0 million have variable interest rates based upon the lender's index rate plus 0.5% for both the domestic line (up to \$2.5 million) and the international line (up to \$1.5 million). Accordingly, interest rate increases would increase our interest expense on outstanding credit line balances. We utilized our credit

line facility only at the end of each quarter in 2006 and 2005, and therefore did not subject ourselves to interest rate exposure. Based on a sensitivity analysis, an increase of 1% in the interest rate would increase our borrowing costs by \$10,000 for each \$1 million of borrowings, if outstanding for the entire year, against our bank credit facility or a maximum of \$40,000 if we utilized our entire credit line.

Foreign Currency Risk

A substantial majority of our revenue, expense and purchasing activities are transacted in U.S. dollars. However, we require our European distributors to purchase our products in Euros, we pay the expenses of our European subsidiary in Euros, and we expect to enter into selected future purchase commitments with foreign suppliers that may be paid in the local currency of the supplier. To date these balances have been small, and we have not been subject to significant losses from material foreign currency fluctuations. Based on a sensitivity analysis of our net foreign currency denominated assets and subsidiary expenses at the beginning, during and at the end of the quarter ended December 31, 2006, an adverse change of 10% in exchange rates would result in a decrease in our net income for the fourth quarter of approximately \$74,800, if left unprotected. For the fourth quarter of 2006 the total net adjustment for the effects of changes in foreign currency on cash balances, collections, payables, and derivatives was a net gain of \$18,900. We hedge a significant portion of our European receivable balances denominated in Euros to reduce the foreign currency risk associated with these assets. We will continue to monitor and assess the risk associated with these exposures and may at some point in the future take additional actions to mitigate these risks.

Item 8. Financial Statements and Supplementary Data

The supplementary information required by this item is included in Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations."

REPORT OF MOSS ADAMS LLP
INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of
Socket Communications, Inc.

We have audited the accompanying consolidated balance sheets of Socket Communications, Inc. as of December 31, 2006 and 2005, and the related consolidated statements of operations, preferred stock and stockholders' equity, and cash flows for the years ended December 31, 2006, 2005 and 2004. Socket Communications, Inc.'s management is responsible for these financial statements. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control

**SOCKET COMMUNICATIONS, INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

NOTE 1 - Summary of Significant Accounting Policies

Organization and Business

Socket Communications, Inc. ("Socket" or the "Company") produces mobile systems serving the business market. The Company designs, manufactures and sells data collection and connectivity products for mobile electronic devices. The Company's data collection products are designed to collect data on handheld computers, tablet computers, notebook computers and selected smartphones using bar code scanning and Radio Frequency Identification (RFID) technologies. The Company's connectivity products are designed to connect handheld computers, tablet computers, notebook computers and smartphones to the Internet, to local area computer networks, to wide area computer networks, and to other peripheral devices through both wireless and cable connections. The Company also offers embedded products that are designed to be installed inside third-party mobile electronic devices, and serial products that connect electronic devices. The Company has announced plans to offer a family of handheld computers beginning

in 2007. The Company's products are designed for use with a broad range of mobile computing devices that support standard expansion mechanisms. The standard expansion mechanisms supported include slots for plug-in cards in the CompactFlash, PC Card, and Secure Digital Input/Output (SDIO) form factors and Bluetooth®, a short range wireless device connection technology, and Wireless LAN, a wireless network connection technology. The Company's products are designed to address mobile workforce connectivity needs by enabling the use of handheld devices to extend data communications capabilities beyond location-dependent wired networks or telephone lines. The Company's products integrate hardware, software and services into complete mobile connectivity solutions. The Company is incorporated in the state of Delaware.

Principles of Consolidation

The consolidated financial statements include all of the accounts of the Company and those of its wholly owned subsidiary. All intercompany accounts and transactions have been eliminated. The expenses associated with the operations of our foreign offices were \$380,173, \$866,095, and \$969,492, in 2006, 2005, and 2004, respectively.

Use of Estimates

The preparation of financial statements in conformity with U.S. generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, and the disclosure of contingent assets and liabilities at the date of the financial statements as well as the reported amounts of revenue and expense during the reporting period. Actual results could differ from those estimates, and such differences may be material to the financial statements.

Cash Equivalents

The Company considers all highly liquid investments purchased with a maturity date of 90 days or less at date of purchase to be cash equivalents. As of December 31, 2006 and 2005, all of the Company's cash and cash equivalents consisted of amounts held in demand and money market deposits in banks.

(Table of Contents)

Fair Value of Financial Instruments

The carrying value of the Company's cash and cash equivalents, accounts receivable, accounts payable, debt and foreign exchange contracts approximate fair value due to the relatively short period of time to maturity.

Derivative Financial Instruments

The Company's primary objective for holding derivative financial instruments is to manage foreign currency risks. The Company's derivative financial instruments are recorded at fair value and are included in other current assets, other assets, other accrued liabilities or long-term debt depending on the contractual maturity and whether the Company has a gain or loss. The Company's accounting policies for these instruments are based on whether they meet the Company's criteria for designation as hedging transactions, either as cash flow or fair value hedges. A hedge of the exposure to variability in the cash flows of an asset or a liability, or of a forecasted transaction, is referred to as a cash flow hedge. A hedge of the exposure to changes in fair value of an asset or a liability, or of an unrecognized firm commitment, is referred to as a fair value hedge. The criteria for designating a derivative as a hedge include the instrument's effectiveness in risk reduction and, in most cases, a one-to-one matching of the derivative instrument to its underlying transaction. Gains and losses on derivatives that are not designated as hedges for accounting purposes are recognized currently in earnings. The Company's derivatives are treated as cash flow hedges for accounting purposes.

Accounts Receivable Allowances

The Company estimates the amount of uncollectible accounts receivable at the end of each reporting period based on the aging of the receivable balance, current and historical customer trends, and communications with its customers.

Edgar Filing: SOCKET COMMUNICATIONS INC - Form 10-K

Amounts are written off only after considerable collection efforts have been made and the amounts are determined to be uncollectible. The following describes activity in the allowance for doubtful accounts for the years ended December 31, 2006, 2005, and 2004:

Year	Balance at Beginning of Year	Charged to Costs and Expenses	Amounts Written Off	Balance at End of Year
2006	\$ 118,651	\$ ---	\$ ---	\$ 118,651
2005	\$ 127,300	\$ ---	\$ 8,649	\$ 118,651
2004	\$ 113,244	\$ 47,953	\$ 33,897	\$ 127,300

Inventories

Inventories consist principally of raw materials and sub-assemblies stated at the lower of standard cost, which approximates actual costs (first-in, first-out method), or market. Market is defined as replacement cost, but not in excess of estimated net realizable value or less than estimated net realizable value less a normal margin. At the end of each reporting period, the Company compares its inventory on hand to its forecasted requirements for the next nine month period and the Company writes-off the cost of any inventory that is surplus, less any amounts that the Company believes it can recover from the disposal of goods that it specifically believes will be saleable past a nine month horizon. The Company's sales forecasts are based upon historical trends, communications from customers, and marketing data regarding market trends and dynamics. Changes in the amounts recorded for surplus or obsolete inventory are included in cost of revenue. Inventory components at year-end are shown in the following table:

(Table of Contents)

	December 31,	
	2006	2005
Raw materials and sub-assemblies	\$ 2,044,643	\$ 1,910,653
Finished goods	305,641	284,741
	\$ 2,350,284	\$ 2,195,394

Property and Equipment

Property and equipment are stated at cost. Depreciation and amortization are computed using the straight-line method, over the estimated useful lives of the assets ranging from one to five years. Assets under capital leases are amortized over the shorter of the asset life or the remaining lease term.

Goodwill and Other Intangible Assets Review

Goodwill and intangible assets are accounted for in accordance with Statement of Financial Accounting Standards No. 142, "Goodwill and Other Intangible Assets" (FAS 142). The Company assesses the impairment of long-lived assets, including goodwill and intangibles on a quarterly basis or whenever events or changes in circumstances indicate that the fair value is less than its carrying value. Factors that the Company considers important which could trigger an impairment review include poor economic performance relative to historical or projected future operating results, significant negative industry, economic or company specific trends, changes in the manner of our use of the assets or the plans for our business, market price of our common stock, and loss of key personnel.

Goodwill represents the excess of cost over the estimated fair value of net assets acquired from the acquisitions of Nokia's CompactFlash Bluetooth Card business in 2002 and 3rd Rail Engineering in 2000, which in accordance with

FAS 142, is no longer being amortized. Also in accordance with FAS 142, the Company tests goodwill for impairment at the reporting unit level on a quarterly basis. The Company has determined it is appropriate to report as a single unit. SFAS No. 142 requires a two-step goodwill impairment test whereby the first step, used to identify potential impairment, compares the fair value of a reporting unit with its carrying amount including goodwill. If the fair value of a reporting unit exceeds its carrying amount, goodwill of the reporting unit is considered not impaired and the second test is not performed. The second step of the impairment test is performed when required and compares the implied fair value of the reporting unit goodwill with the carrying amount of that goodwill. If the carrying amount of the reporting unit goodwill exceeds the implied fair value of that goodwill, an impairment loss shall be recognized in an amount equal to that excess. Based on the goodwill test for impairment performed during the quarter ended December 31, 2006, management determined that there is no impairment of goodwill.

Concentration of Credit Risk

Financial instruments that potentially subject the Company to significant concentrations of credit risk consist principally of cash, cash equivalents and accounts receivable. The Company invests its cash in demand and money market deposit accounts in banks. The Company limits the credit exposure to any one financial institution or instrument and is exposed to credit risk in the event of default by these institutions, to the extent of the amounts recorded on the balance sheet. To date, the Company has not experienced losses on these investments. The Company's trade accounts receivables are primarily with distributors and original equipment manufacturers. The Company performs ongoing credit evaluations of its customers' financial conditions but the Company generally requires no collateral. Reserves are maintained for potential credit losses, and such losses have been within management's expectations.

(Table of Contents)

Concentration of Suppliers

Several of the Company's component parts are produced by a sole or limited number of suppliers. Shortages could occur in these essential materials due to an interruption of supply or increased demand in the industry. If the Company were unable to procure certain of such materials, it would be required to reduce its operations, which could have a material adverse effect upon its results.

Revenue Recognition

Revenue on sales to customers other than distributors is recognized upon shipment provided that persuasive evidence of a sales arrangement exists, the price is fixed and determinable, title has transferred, collection of resulting receivables is reasonably assured, there are no customer acceptance requirements and there are no remaining significant obligations. Estimated product returns are provided for in accordance with Statement of Financial Accounting Standards No. 48, "Revenue Recognition When Right of Return Exists." Revenues on sales to distributors where a right of return exists are recognized upon "sell-through" when products are shipped from the distributor to the distributor's customer.

The Company also earns revenues from services performed in connection with consulting arrangements. For those contracts that include contract milestones or acceptance criteria the Company recognizes revenue as such milestones are achieved or as such acceptance occurs. In some instances the acceptance criteria in the contract requires acceptance after all services are complete and all other elements have been delivered. Revenue recognition is deferred until those requirements are met.

Research and Development

Research and development expenditures are generally charged to operations as incurred. Statement of Financial

Accounting Standards No. 86, "Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed," requires the capitalization of certain software development costs subsequent to the establishment of technological feasibility. Based on the Company's product development process, technological feasibility is established upon the completion of a working model. Costs incurred by the Company between the completion of the working model and the point at which the product is ready for general release have been insignificant. Accordingly, the Company has charged all such costs to research and development expenses in the accompanying statements of operations.

Advertising Costs

Advertising costs are charged to sales and marketing as incurred. The Company incurred \$724,553, \$825,238, and \$790,730, in advertising costs during 2006, 2005, and 2004, respectively.

Income Taxes

The Company accounts for income taxes in accordance with Statement of Financial Accounting Standards No. 109 (SFAS 109), "Accounting for Income Taxes." Under SFAS 109, deferred tax assets and liabilities are determined based on differences between financial reporting and tax bases of assets and liabilities and are measured using enacted tax rates and laws that will be in effect when the differences are expected to reverse. The Company records a valuation allowance against deferred tax assets when it is more likely than not that such assets will not be realized.

(Table of Contents)

Shipping and handling costs

Shipping and handling costs are included in the cost of sales in the statement of operations.

Net Income (Loss) Per Share

The Company calculates earnings per share in accordance with Financial Accounting Standards Board Statement No. 128, *Earnings per Share*.

The following table sets forth the computation of basic net income (loss) per share:

	Years Ended December 31,		
	2006	2005	2004
Income (loss)	\$ (2,912,096)	\$ (166,675)	\$ 337,800
Adjusted stock dividends and accretion	 (10,653)	 (48,490)	 (50,100)
Income (loss) applicable to common stockholders	\$ (2,922,749)	\$ (215,165)	\$ 287,700
Weighted average common shares outstanding used in computing net income (loss) per share:			
	31,447,266	30,181,266	30,060,900
Weighted average potential common shares	 ---	 ---	 3,914,500
Weighted average diluted common shares	 31,447,266	 30,181,266	 33,975,400
Income (loss) per share applicable to common stockholders:			
	\$ (0.09)	\$ (0.01)	\$ 0.01
Diluted	\$ (0.09)	\$ (0.01)	\$ 0.01

For the 2006 and 2005 periods presented, the diluted net loss per share is equivalent to the basic net loss per share because the Company experienced losses in these years and thus no potential common shares underlying stock options, warrants, or convertible preferred stock have been included in the net loss per share calculation. Options and

warrants to purchase 9,828,275 and 9,979,793 shares of Common Stock in 2006 and 2005, respectively, have been omitted from the loss per share calculation as their effect is anti-dilutive. For the 2004 period the diluted shares outstanding include the dilutive effect of assumed conversion of Series F Convertible Preferred Stock and assumed exercise of all in-the-money employee stock options and warrants, which is calculated based on the average share price for the 2004 fiscal period using the treasury stock method. Under the treasury stock method, the hypothetically received proceeds from the exercise of in-the-money options and warrants are assumed to be used to repurchase shares. For 2004, options and warrants to purchase 3,613,954 shares of the Company's Common Stock were excluded from the calculation of diluted earnings per share because the exercise prices were greater than or equal to the average price of the common shares, and therefore their inclusion would have been anti-dilutive.

(Table of Contents)

Stock-Based Compensation

On January 1, 2006, the Company adopted SFAS 123R for the fiscal year ended December 31, 2006. SFAS 123R requires all share-based awards to employees, including grants of employee stock options, to be recognized in the financial statements based on their fair values. The valuation provisions of SFAS 123R apply to new grants and to grants that were outstanding as of the effective date. Under SFAS 123R, the Company uses a binomial lattice valuation model to estimate fair value of stock option grants made on or after January 1, 2006. The binomial lattice model incorporates estimates for expected volatility, risk-free interest rates, employee exercise patterns and post-vesting employment termination behavior, and these estimates will affect the calculation of the fair value of the Company's stock option grants. The fair value of stock option grants outstanding as of the effective date is estimated using the Black-Scholes option pricing model used under SFAS 123. The Company adopted the modified prospective recognition method and implemented the provisions of SFAS 123R beginning with the first quarter of 2006.

At December 31, 2006, options issued to employees for 8,838,563 shares were outstanding, of which 6,789,249 were exercisable. The weighted average fair value of the individual options issued and outstanding during the year ended December 31, 2006 was estimated at \$1.69 per share. The fair values were determined using a binomial lattice valuation model for options granted during fiscal 2006, and a Black-Scholes valuation model for options granted prior to January 1, 2006. Weighted average assumptions for options issued and outstanding during the year ended December 31, 2006 are shown below:

	Year ended December 31, 2006
Risk-free interest rate (%)	3.51%
Dividend yield	---
Volatility factor	1.2
Expected option life (years)	4.8

Total stock-based compensation expense recognized in our consolidated statement of operations for the year ended December 31, 2006 is as follows:

Income Statement Classification	Year ended December 31, 2006
Cost of revenue	\$ 101,705
Research and development	310,902
Sales and marketing	456,284

General and administrative	345,857
Total	\$1,214,748

Prior to January 1, 2006 the Company accounted for employee stock options in accordance with Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees" ("APB 25"), and the Company adopted the disclosure-only alternative described in Statement of Financial Accounting Standards No. 123, "Accounting for Stock-Based Compensation" ("SFAS 123"). Under APB 25, the Company generally did not record compensation expense, because the exercise price of the Company's employee stock options equaled the market price of the underlying stock on the date of grant. Pro forma information regarding net loss and loss per share available to common stockholders was required by SFAS 123, and such information has been determined as if the Company had accounted for its employee stock options under the fair value method.

(Table of Contents)

Had compensation cost for the Company's stock-based compensation plans been determined based on the fair value at the grant dates for awards under those plans consistent with the method of SFAS 123, the Company's per share results would have changed to the pro forma net loss amounts indicated below:

	Years Ended December 31,	
	2005	2004
Net income (loss) applicable to common shareholders, as reported	\$ (215,165)	\$ 287,778
Stock-based employee compensation expense determined under fair value based method	(2,317,132)	(1,763,002)
Pro forma net loss applicable to common shareholders	\$ (2,532,297)	\$ (1,475,224)
Basic net income (loss) per share, as reported	\$ (0.01)	\$ 0.01
Diluted net income (loss) per share, as reported	\$ (0.01)	\$ 0.01
Pro forma basic and diluted net loss per share	\$ (0.08)	\$ (0.05)

The fair value of these options was estimated at the date of grant using the Black-Scholes option pricing model with the following weighted average assumptions for the years ended December 31:

	2005	2004
Risk-free interest rate (%)	4.02%	3.13%
Dividend yield	---	---
Volatility factor	1.2	1.3
Expected option life (years)	4.6	4.5

The Black-Scholes option valuation model was developed for use in estimating the fair value of traded options that have no vesting restrictions and are fully transferable. In addition, option valuation models require the input of highly subjective assumptions including the expected stock price volatility and expected option life. Because the Company's employee stock options have characteristics significantly different from those of traded options, and because changes in the subjective input assumptions can materially affect the fair value estimate, in management's opinion, the existing models do not necessarily provide a reliable single measure of the fair value of the Company's employee stock options.

Recent Accounting Standards

In June 2006, the Financial Accounting Standards Board issued Interpretation No. 48, "Accounting for Uncertainty in

Income Taxes - An Interpretation of FASB Statement No. 109" ("FIN 48"), to create a single model to address accounting for uncertainty in tax positions. FIN 48 clarifies the accounting for income taxes by prescribing a minimum recognition threshold a tax position is required to meet before being recognized in the financial statements. FIN 48 also provides guidance on derecognition, measurement, classification, interest and penalties, accounting in interim periods, disclosure and transition. FIN 48 is effective for fiscal years beginning after December 15, 2006. The Company adopted FIN 48 as of January 1, 2007, as required. The cumulative effect of adopting FIN 48 will be recorded in retained earnings and other accounts as applicable. The Company has determined that the adoption of FIN 48 will not have a material affect on the Company's financial position and consolidated results of operations or cash flows.

(Table of Contents)

Segment Information

The Company follows Statement No. 131, "Disclosures about Segments of an Enterprise and Related Information." Operating segments are defined as components of an enterprise about which separate financial information is available that is evaluated regularly by the chief executive officer in deciding how to allocate resources and in assessing performance. The Company operates in one segment, data collection and connection solutions for mobile electronic devices. The Company markets its products in the United States and foreign countries through its sales personnel and distributors.

Information regarding geographic areas for the years ended December 31, 2006, 2005 and 2004 is as follows:

Revenues: (in thousands)	Years Ended December 31,		
	2006	2005	2004
United States	\$ 17,073	\$ 16,206	\$ 16,392
Europe	5,824	6,142	6,293
Asia and rest of world	 2,084	 2,686	 3,445
	\$ 24,981	\$ 25,034	\$ 26,130

Export revenues are attributable to countries based on the location of the customers.

Information regarding product families for the years ended December 31, 2006, 2005 and 2004 is as follows:

Revenues: (in thousands)	Years Ended December 31,		
	2006	2005	2004
Data collection products	\$ 10,371	\$ 9,628	\$ 10,440

(Table of Contents)**NOTE 2 - Intangible Technology**

Intangible assets consist of a patent purchased in 2004 for \$600,000 covering the design and functioning of plug-in bar code scanners, bar code imagers and RFID products, which is being amortized on a straight line basis over its estimated life of ten years; intangible assets of \$570,750 remaining from a prior acquisition in 2000 consisting of developed software and technology with estimated lives at the time of acquisition of 8.5 years; and a licensing agreement with a book value of \$38,000, which was reclassified as an intangible asset at December 31, 2004 and is being amortized over its remaining life of three years.

Intangible technology as of December 31, 2006 consisted of the following:

	Gross Assets	Accumulated Amortization	Net
Patent	\$ 600,000	\$ 150,000	\$ 450,000
Project management tools	570,750	419,669	151,081
Licensing agreement	 114,342	 106,932	 7,410
Intangible technology	\$ 1,285,092	\$ 676,601	\$ 608,491

Intangible technology as of December 31, 2005 consisted of the following:

	Gross Assets	Accumulated Amortization	Net
Patent	\$ 600,000	\$ 90,000	\$ 510,000
Project management tools	570,750	352,522	218,228
Licensing agreement	 114,342	 93,633	 20,709
Intangible technology	\$ 1,285,092	\$ 536,155	\$ 748,937

Based on identified intangible assets recorded at December 31, 2006 and assuming no subsequent impairment of the underlying assets, the annual amortization expense is expected to be as follows:

Year	Amount
2007	\$ 134,557
2008	127,147
2009	76,787
2010	60,000
2011 and beyond	210,000
	\$ 608,491

NOTE 3 - Series F Convertible Preferred Stock

On March 21, 2003, the Company sold 276,269 units of securities at a price of \$7.22 per unit (total of \$2,000,000 gross cash proceeds) in a private equity placement. Each unit consisted of one share of the Company's Series F convertible preferred stock (the "Series F Preferred Stock") and a three-year warrant to purchase three shares of the Company's common stock. Two directors of the Company invested an aggregate of \$115,000 in the financing. Each share of Series F Preferred Stock was convertible, in whole or in part, into 10 shares of common stock at the option of the holder at any time for a period of three years following the date of sale, with a mandatory conversion date on

March 21, 2006. The holders of Series F Preferred Stock had voting rights equal to the number of shares of common stock issuable upon conversion. The originally issued Series F Preferred Stock was convertible into a total of 2,762,690 shares of common stock at a conversion price of \$0.722 per share, subject to certain adjustments. An additional 828,807 shares of common stock were issuable upon exercise of the originally issued warrants at an exercise price of \$0.722 per share. In addition, the Company issued five-year warrants to the placement agent to acquire up to 718,300 shares of common stock at \$0.722 per share.

(Table of Contents)

On March 21, 2006, the remaining outstanding shares of Series F Preferred Stock automatically converted into common stock, resulting in the issuance of 823,300 shares of common stock. During the first quarter of 2006, holders elected to exercise the remaining outstanding three-year warrants resulting in the issuance of 461,022 shares of common stock. Dividends accrued on the Series F Preferred Stock at the rate of 8% per annum and were payable quarterly in cash or in common stock, at the option of the Company. Final dividends on the Series F Preferred Stock up through the date of mandatory conversion in the first quarter 2006 were \$10,653, and were paid in cash prior to the end of the first quarter. Dividends for 2005 were \$48,490, and were paid in cash subsequent to each quarter. During the year holders of 1,493 shares of Series F Preferred Stock elected to convert their shares into 14,930 shares of common stock leaving 82,330 shares of Series F Preferred Stock outstanding at December 31, 2005. Dividends for 2004 were \$50,105 and were paid in cash subsequent to each quarter. During the year holders of 9,083 shares of Series F Preferred Stock elected to convert their shares into 90,830 shares of common stock.

NOTE 4 - Bank Financing Arrangements

On March 3, 2006, the Company agreed with its bank to extend the term of the existing credit facility by an additional year, which will now expire on March 2, 2008. The credit facility under the credit agreement allows the Company to borrow up to \$4,000,000 based on the level of qualified domestic and international receivables, up to a maximum of \$2,500,000 and \$1,500,000, respectively, at the lender's index rate based on prime plus 0.5%. The rates in effect at December 31, 2006 were 8.75% on both the domestic and international lines. At December 31, 2006, outstanding amounts borrowed under the lines were \$1,100,226 and \$1,113,035, respectively, which were the approximate amounts available on the lines. These amounts outstanding at December 31, 2006 were repaid in January 2007. At December 31, 2005, outstanding amounts borrowed under the lines were \$1,358,984 and \$949,787, respectively, which were the approximate amounts available on the lines. These amounts outstanding at December 31, 2005 were repaid in January 2006. The Company used the credit facility only at the end of the each quarter in fiscal years 2006 and 2005. Under the credit agreement, the Company must maintain quarterly minimum tangible net worth equal to \$5,400,000, plus 50% of quarterly net profits and 50% of net proceeds from equity and subordinated debt financing transactions beginning with the quarter ending December 31, 2006. The Company was in compliance with the tangible net worth requirements at the end of fiscal years 2006 and 2005.

(Table of Contents)

NOTE 5 - Capital Lease Obligations and Equipment Financings

The Company leases certain of its equipment under capital leases. The leases are collateralized by the underlying

assets. At December 31, 2006, property and equipment with a cost of \$37,333 were subject to such financing arrangements. Related accumulated amortization at December 31, 2006 amounted to \$28,961. Future minimum payments under capital lease and equipment financing arrangements as of December 31, 2006, are as follows:

2007	8,556
Total minimum payments	8,556
Less amount representing interest	(184)
Present value of net minimum payments	8,372
Less current portion	(8,372)
Long-term portion	\$ ---

NOTE 6 - Commitments

On October 24, 2006, the Company entered into a commercial building lease agreement for its new headquarters. The sixty-four month lease, beginning on February 1, 2007, provides for the lease by the Company of approximately 37,131 square feet of space in Newark, California. Total base rent payable over the lease period is \$1,771,595. The Company has one option to extend the term of the lease for an additional five-year period with respect to the entire premises. Future minimum lease payments under all operating leases are as shown below:

2007	\$ 191,039
2008	337,706
2009	349,663
2010	362,102
2011	374,578
2012	156,507
	\$ 1,771,595

Rental expense under all operating leases was \$349,428, \$377,427, and \$470,524, for each of the years ended December 31, 2006, 2005, and 2004, respectively.

The Company has non-cancelable purchase commitments with its vendors for inventory used in the ordinary course of business in the aggregate amount of \$1.5 million in 2007.

(Table of Contents)

NOTE 7 - Stock Option/Stock Issuance Plan

The Company has three Stock Option Plans: the 1995 Stock Option/Stock Issuance Plan (the "1995 Plan"), the 1999 Stock Plan (the "1999 Plan"), and the 2004 Equity Incentive Plan (the "2004 Plan").

The 1995 Plan

The 1995 Plan provides for the grant of incentive stock options and nonstatutory stock options to employees, directors, and consultants of the Company. The Company grants incentive stock options and nonstatutory stock options at an exercise price per share equal to the fair market value per share of common stock on the date of grant. The vesting and exercise provisions are determined by the Board of Directors, with a maximum term of ten years. Upon ratification of the 2004 Plan by the shareholders in June 2004, shares in the 1995 Plan that had been reserved but not issued, as well as any shares issued that would otherwise return to the 1995 Plan as a result of termination of options or repurchase of shares, were added to the shares reserved for issuance under the 2004 Plan. No additional grants will be made from the 1995 Plan.

Edgar Filing: SOCKET COMMUNICATIONS INC - Form 10-K

Information with respect to the 1995 Plan is summarized as follows:

	Options Available	Outstanding Options	
		Number of Shares	Weighted Average Price Per Share
Balance at December 31, 2003	589,888	4,685,265	\$ 1.64
Increase in shares authorized	1,193,421	---	
Granted	(1,022,500)	1,022,500	\$ 3.16
Canceled	212,278	(212,278)	\$ 2.71
Exercised	---	(105,372)	\$ 0.91
Transferred to 2004 Plan	(973,087)	---	
Balance at December 31, 2004	---	5,390,115	\$ 1.90
Canceled	227,212	(227,212)	\$ 2.84

(Table of Contents)

The weighted average fair value of options granted during 2006, 2005, and 2004, under the 2004 Plan was \$0.65, \$0.97, and \$1.10, respectively. As of December 31, 2006 and 2005, options to purchase 1,251,057 and 974,321 shares were exercisable under the 2004 Plan at weighted average exercise prices of \$1.37 and \$1.37, respectively. At December 31, 2004, none of the outstanding options under the 2004 Plan were exercisable.

The 2004 Plan provides for an annual increase to be added on the first day of each fiscal year equal to the lesser of 2,000,000 shares, four percent of the outstanding shares on that date, or a lesser amount as determined by the Board of Directors. On January 1, 2007, 2006, and 2005, a total of 1,274,051, 1,208,948, and 1,205,657 shares, respectively, became available for grant from the 2004 Plan.

The outstanding and exercisable options at December 31, 2006 presented by price range are as follows:

Range of Exercise Prices	Number of Options Outstanding	Options Outstanding Weighted		Options Exercisable	
		Average Remaining Life (Years)	Weighted Average Exercise Price	Number of Options Exercisable	Weighted Average Exercise Price

Common stock financing		629,281	\$	2.73	Aug 2003	Aug 2008
Total warrants	 	989,712	 			

(Table of Contents)**NOTE 9 - Shares Reserved**

Common stock reserved for future issuance was as follows at December 31, 2006:

	Number of shares
Stock option grants outstanding (see Note 7)	8,838,563
Reserved for future stock option grants (see Note 7)	1,078,999
Common stock warrants (see Note 8)	989,712
Total common stock reserved for future issuance	10,907,274

NOTE 10 - Retirement Plan

The Company has a tax-deferred savings plan, the Socket Communications, Inc. 401(k) Plan ("The Plan"), for the benefit of qualified employees. The Plan is designed to provide employees with an accumulation of funds at retirement. Qualified employees may elect to make contributions to The Plan on a quarterly basis. No contributions are made by the Company. Administrative expenses relating to The Plan are not significant.

NOTE 11- Income Taxes

Deferred tax expense for the year ended December 31, 2006 is related to the deferred tax liability on the portion of the Company's goodwill amortized for tax purposes. Due to the indefinite characteristic of this deferred tax liability, it cannot be offset against deferred tax assets, and the deferred tax liability may never reverse. The provision for deferred tax for the periods ended December 31, 2006, 2005, and 2004, consists of the following components:

	Years Ended December 31,		
	2006	2005	2004
Current:			
Federal	\$ ---	\$ ---	\$ ---
State	 --- 	 ---	 ---
Total Current	---	 ---	---
Deferred:			
Federal	150,379	---	---
State	---	---	---
Total Deferred	 150,379 	 --- 	 ---
Total provision for deferred tax	 150,379 	 --- 	 ---

(Table of Contents)

Reconciliation of the statutory federal income tax rate to the Company's effective tax rate:

	Years Ended December 31,					
	2006		2005		2004	
Federal tax at statutory rate	34.00	%	34.00	%	34.00	%
State income tax rate	5.83	%	5.83	%	5.83	%
Losses and credits not benefited	 (45.28)	 %	 (39.83)	 %	 (39.83)	 %
Provision for taxes	(5.45)	%	---	%	---	%

Deferred income tax reflects the net tax effects of temporary differences between the carrying amount of assets and liabilities for financial reporting purposes and the amount used for income tax purposes. Significant components of net deferred tax assets are as follows:

	Years Ended December 31,	
	2006	2005
Deferred tax assets:		
Net operating loss carryforwards	\$ 9,242,000	\$ 8,486,000
Credits	643,000	608,000
Capitalized research and development costs	278,000	496,000
Other acquired intangibles	295,000	171,000
Accruals not currently deductible	1,157,000	958,000
Total deferred tax assets	11,615,000	10,719,000
Valuation allowance for deferred tax assets	(11,469,379)	(10,572,000)
Net deferred tax assets	145,621	147,000
Deferred tax liability:		
Acquired intangibles	(296,000)	(147,000)
Net deferred tax assets (liabilities)	\$ (150,379)	\$ ---

The Company has not generated taxable income in any periods in any jurisdiction, foreign or domestic. The Company has maintained a full valuation allowance for all deferred tax assets.

As of December 31, 2006, the Company had net operating loss carryforwards for federal income tax purposes of approximately \$26,000,000, which will expire at various dates beginning in 2007 through 2026, and federal research and development tax credits of approximately \$375,000, which will expire at various dates beginning in 2007 through 2026. As of December 31, 2006, the Company had net operating loss carryforwards for state income tax purposes of approximately \$6,700,000, which will expire at various dates in 2007 through 2016, and state research and development tax credits of approximately \$406,000, which can be carried forward indefinitely. During 2006, approximately \$212,000 of California net operating loss expired unutilized.

Utilization of the net operating loss and tax credit carryforwards may be subject to a substantial annual limitation due to the ownership change limitations provided by the Internal Revenue Code Section 382 and similar state provisions. The annual limitation may result in the expiration of the net operating loss and credit carryforwards before utilization.

(Table of Contents)

The tax benefits associated with employee stock options provide a deferred benefit of approximately \$800,000 which has been offset by the valuation allowance. The deferred tax benefit associated with the employee stock options will be credited to additional paid-in capital when realized.

In June 2006, the Financial Accounting Standards Board issued Interpretation No. 48, "Accounting for Uncertainty in Income Taxes - An Interpretation of FASB Statement No. 109" ("FIN 48"), to create a single model to address accounting for uncertainty in tax positions. FIN 48 clarifies the accounting for income taxes by prescribing a minimum recognition threshold a tax position is required to meet before being recognized in the financial statements. FIN 48 also provides guidance on derecognition, measurement, classification, interest and penalties, accounting in interim periods, disclosure and transition. FIN 48 is effective for fiscal years beginning after December 15, 2006. The Company adopted FIN 48 as of January 1, 2007, as required. The cumulative effect of adopting FIN 48 will be recorded in retained earnings and other accounts as applicable. The Company has determined that the adoption of FIN 48 will not have a material affect on the Company's position and consolidated results of operations or cash flows.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

Not Applicable.

Item 9A. Controls and Procedures

Evaluation of disclosure controls and procedures

Our management evaluated, with the participation of our Chief Executive Officer and our Chief Financial Officer, the effectiveness of our disclosure controls and procedures as of the end of the period covered by this Annual Report on Form 10-K. Based on this evaluation, our Chief Executive Officer and our Chief Financial Officer have concluded that our disclosure controls and procedures are effective to ensure that information we are required to disclose in reports that we file or submit under the Securities Exchange Act of 1934 is (i) recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms, and (ii) accumulated and communicated to our management, including our Chief Executive Officer and our Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure, and such information is recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms.

Management's Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting. There are inherent limitations in the effectiveness of any internal control, including the possibility of human error and the circumvention or overriding of controls. Accordingly, even effective internal controls can provide only reasonable assurances with respect to financial statement preparation. Further because of changes in conditions, the effectiveness of internal controls may vary over time.

We assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2006. In making this assessment, we used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control - Integrated Framework*.

Based on our assessment using those criteria, we believe that, as of December 31, 2006, our internal control over financial reporting is effective.

Changes in internal control over financial reporting

There was no change in our internal control over financial reporting that occurred during the period covered by this Annual Report on Form 10-K that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Item 9B. Other Information

None.
