Notes to Consolidated Financial Statements (Unaudited)

NOTE 1. ORGANIZATION

Parke Bancorp, Inc. ("Parke Bancorp" or the "Company") is a bank holding company incorporated under the laws of the State of New Jersey in January 2005 for the sole purpose of becoming the holding company of Parke Bank (the "Bank").

The Bank is a commercial bank which commenced operations on January 28, 1999. The Bank is chartered by the New Jersey Department of Banking and insured by the Federal Deposit Insurance Corporation ("FDIC"). Parke Bancorp and the Bank maintain their principal offices at 601 Delsea Drive, Washington Township, New Jersey. The Bank also conducts business through branches in Galloway Township, Northfield and Washington Township, New Jersey and Philadelphia, Pennsylvania.

The Bank competes with other banking and financial institutions in its primary market areas. Commercial banks, savings banks, savings and loan associations, credit unions and money market funds actively compete for savings and time certificates of deposit and all types of loans. Such institutions, as well as consumer financial and insurance companies, may be considered competitors of the Bank with respect to one or more of the services it renders.

The Bank is subject to the regulations of certain state and federal agencies, and accordingly, the Bank is periodically examined by such regulatory authorities. As a consequence of the regulation of commercial banking activities, the Bank's business is particularly susceptible to future state and federal legislation and regulations.

The FDIC and the New Jersey Department of Banking and Insurance Consent Orders: On April 9, 2012, the Bank entered into Consent Orders with the FDIC and the New Jersey Department of Banking and Insurance (the "Department"). Under the Consent Orders, the terms of which are substantially identical, the Bank is required, among other things, subject to review and approval by the FDIC and the Department: (i) to adopt and implement a plan to reduce the Bank's position in delinquent or classified assets; (ii) to adopt and implement a program providing for a periodic independent review of the Bank's loan portfolio and the identification of problem credits; (iii) to review and revise the Bank's loan policies and procedures to address identified lending deficiencies; and (iv) to adopt and implement a plan to reduce and manage each of the concentrations of credit identified by the FDIC and the Department.

The Consent Orders also require the Bank to obtain the prior approval of the FDIC and the New Jersey Department before declaring or paying any dividend or appointing or changing the title or responsibilities of any director or senior executive officer. Additional regulatory provisions require FDIC prior approval before the Bank enters into any employment agreement or other agreement or plan providing for the payment of a "golden parachute payment" or the making of any golden parachute payment. The Bank believes it is in substantial compliance with the terms of the Consent Order.

NOTE 2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of Financial Statement Presentation: The accounting and reporting policies of the Company conform to accounting principles generally accepted in the United States of America ("GAAP") and predominant practices within the banking industry.

The accompanying consolidated financial statements include the accounts of the Company and its wholly-owned subsidiary the Bank. Also included are the accounts of 44 Business Capital Partners LLC, a joint venture formed in 2009 to originate and service SBA loans. The Bank has a 51% ownership interest in the

joint venture. Parke Capital Trust I, Parke Capital Trust II and Parke Capital Trust III are wholly-owned subsidiaries but are not consolidated because they do not meet the requirements for consolidation under applicable accounting guidance. All significant inter-company balances and transactions have been eliminated.

The accompanying interim financial statements should be read in conjunction with the annual financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the year ended December 31, 2012 since they do not include all of the information and footnotes required by GAAP. The accompanying interim financial statements for the six months and three months ended June 30, 2013 and 2012 are unaudited. The balance sheet as of December 31, 2012, was derived from the audited financial statements. In the opinion of management, these financial statements include all normal and recurring adjustments necessary for a fair statement of the results for such interim periods. Results of operations for the six months ended June 30, 2013 are not necessarily indicative of the results for the full year.

Use of Estimates: The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Material estimates that are particularly susceptible to significant change in the near term include the allowance for loan losses, other than temporary impairment losses on investment securities, the valuation of deferred income taxes, servicing assets and carrying value of OREO.

Recently Issued Accounting Pronouncements:

In December 2011, the FASB issued ASU 2011-11, "Balance Sheet, Disclosure about Offsetting Assets and Liabilities (Topic 210)". The objective of this update is to provide enhanced disclosures that will enable users of its financial statements to evaluate the effect or potential effect of netting arrangements on an entity's financial position. This includes the effect or potential effect of rights of setoff associated with an entity's recognized assets and recognized liabilities within the scope of this Update. The amendments require enhanced disclosures by requiring improved information about financial instruments and derivative instruments that are either (1) offset in accordance with either Section 210-20-45 or Section 815-10-45 or (2) subject to an enforceable master netting arrangement or similar agreement, irrespective of whether they offset in accordance with either Section 210-20-45 or Section 815-10-45. These amendments are effective for annual periods beginning on or after January 1, 2013, and interim periods within those annual periods. An entity should provide the disclosures required by those amendments retrospectively for all comparative periods presented. Adoption of this update did not have a material impact on the Company's financial position or results of operations.

In January 2013, the FASB issued ASU 2013-01, "Balance Sheet, Clarifying the Scope of Disclosures about Offsetting Assets and Liabilities (Topic 210)". The amendments in this update clarify that the scope of ASU 2011-11 applies to derivatives accounted for in accordance with Topic 815, Derivatives and Hedging, including bifurcated embedded derivatives, repurchase agreements and reverse repurchase agreements, and securities borrowing and securities lending transactions that are either offset in accordance with Section 210-20-45 or Section 815-10-45 or subject to an enforceable master netting arrangement or similar agreement. An entity is required to apply the amendments for fiscal years beginning on or after January 1, 2013, and interim periods within those annual periods. An entity should provide the required disclosures retrospectively for all comparative periods presented. Adoption of this update did not have a material impact on the Company's financial position or results of operations.

In February 2013, the FASB issued ASU 2013-02, "Comprehensive Income, Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income (Topic 220)". The amendments in this

update aim to improve the reporting of reclassifications out of accumulated other comprehensive income. The amendments in this update seek to attain that objective by requiring an entity to report the effect of significant reclassifications out of accumulated other comprehensive income on the respective line items in net income if the amount being reclassified is required under GAAP to be reclassified in its entirety to net income. For other amounts that are not required under GAAP to be reclassified in their entirety to net income in the same reporting period, an entity is required to cross-reference other disclosures required under U.S. GAAP that provide additional detail about those amounts. This would be the case when a portion of the amount reclassified out of accumulated other comprehensive income is reclassified to a balance sheet account instead of directly to income or expense in the same reporting period. For public entities, the amendments are effective prospectively for reporting periods beginning after December 15, 2012. The Company adopted the amendments of ASU 2011-12 effective January 1, 2013 and has applied the amendments retrospectively. Adoption of this update did not have a material impact on the Company's financial position or results of operations.

NOTE 3. INVESTMENT SECURITIES

The amortized cost and fair value of debt securities classified as available for sale and held to maturity, by contractual maturity as of June 30, 2013 are as follows:

	Amortized Cost (Amounts	Fair Value in thousands)
Available for sale:		
Due within one year	\$ —	\$—
Due after one year through five years		
Due after five years through ten years	_	
Due after ten years	6,063	4,545
Residential mortgage-backed securities and collateralized mortgage obligations	12,755	12,986
Total available for sale	\$18,818	\$17,531
Held to maturity:		
Due within one year	\$ —	\$ —
Due after one year through five years		
Due after five years through ten years	_	
Due after ten years	2,084	2,139
Total held to maturity	\$2,084	\$2,139

Expected maturities will differ from contractual maturities for mortgage related securities because the issuers of certain debt securities do have the right to call or prepay their obligations without any penalty.

As of June 30, 2013 and December 31, 2012, approximately \$12.4 million and \$10.3 million, respectively, of investment securities were pledged as collateral for borrowed funds. In addition, securities with a carrying value of \$6.7 million and \$4.2 million, respectively, were pledged to secure public deposits at June 30, 2013 and December 31, 2012.

The following tables show the gross unrealized losses and fair value of the Company's investments with unrealized losses that are not deemed to be other than temporarily impaired ("OTTI"), aggregated by investment category and length of time that individual securities have been in a continuous unrealized loss position, at June 30, 2013 and December 31, 2012:

Residential Mortgage-Backed Securities and Collateralized Mortgage Obligations: The unrealized losses on the Company's investment in mortgage-backed securities relates to four securities. The losses were caused by movement in interest rates. The securities were issued by FNMA, a government sponsored entity. It is expected that the U.S. government will guarantee all contractual cash flows. Because the Company does not intend to sell the investment and it is not more likely than not that the Company will be required to sell the investment before recovery of its amortized cost basis, which may be maturity, it does not consider the investment in these securities to be other-than-temporarily impaired at June 30, 2013.

Collateralized Debt Obligations: The Company's unrealized loss on investments in collateralized debt obligations ("CDOs") relates to three securities issued by financial institutions, totaling \$3.7 million. CDOs are pooled securities primarily secured by trust preferred securities ("TruPS"), subordinated debt and surplus notes issued by small and mid-sized banks and insurance companies. These securities are generally floating rate instruments with 30-year maturities, and are callable at par by the issuer after five years. The current economic downturn has had a significant adverse impact on the financial services industry; consequently, TruPS CDOs do not have an active trading market. With the assistance of competent third-party valuation specialists, the Company utilized the following methodology to determine the fair value:

Cash flows were developed based on the estimated speeds at which the trust preferred securities are expected to prepay (a range of 1% to 2%), the estimated rates at which the trust preferred securities are expected to defer payments, the estimated rates at which the trust preferred securities are expected to default (a range of 0.57% to 0.66%), and the severity of the losses on securities which default (95%). Trust preferred securities generally allow for prepayment by the issuer without a prepayment penalty any time after five years. Due to the lack of new trust preferred issuances and the relatively poor conditions of the financial institution industry, a relatively modest rate of prepayment was assumed going forward. Estimates for conditional default rates ("CDR") are based on the payment characteristics of the trust preferred securities themselves (e.g. current, deferred, or defaulted) as well as the financial condition of the trust preferred issuers in the pool. Estimates for the near-term rates of deferral and CDR are based on key financial ratios relating to the financial institutions' capitalization, asset quality, profitability and liquidity. Finally, we consider whether or not the financial institution has received TARP funding, and if it has, the amount. Longer-term rates of deferral and defaults are based on historical averages. The fair value of each bond was assessed by discounting its projected cash flows by a discount rate. The discount rates were based on the yields of publicly traded TruPS and preferred stock issued by comparably rated banks (3 month LIBOR plus a spread of 400 to 959 basis points). The fair value for previous reporting periods was based on indicative market bids and resulted in much lower values due to the inactive trading market.

The underlying issuers have been analyzed, and projections have been made regarding the future performance, considering factors including defaults and interest deferrals. The analysis indicates that the

Company should expect to receive all contractual cash flows. Because the Company does not intend to sell the investments and it is not more likely than not that the Company will be required to sell the investments before recovery of their amortized cost basis, which may be maturity, it does not consider these investments to be other than temporarily impaired at June 30, 2013.

Other Than Temporarily Impaired Debt Securities

We assess whether we intend to sell or it is more likely than not that we will be required to sell a security before recovery of its amortized cost basis less any current-period credit losses. For debt securities that are considered other than temporarily impaired and that we do not intend to sell and will not be required to sell prior to recovery of our amortized cost basis, we separate the amount of the impairment into the amount that is credit related (credit loss component) and the amount due to all other factors. The credit loss component is recognized in earnings and is the difference between the security's amortized cost basis and the present value of its expected future cash flows. The remaining difference between the security's fair value and the present value of future expected cash flows is due to factors that are not credit related and is recognized in other comprehensive income.

The present value of expected future cash flows is determined using the best estimate of cash flows discounted at the effective interest rate implicit to the security at the date of purchase or the current yield to accrete an asset-backed or floating rate security. The methodology and assumptions for establishing the best estimate cash flows vary depending on the type of security. The asset-backed securities cash flow estimates are based on bond specific facts and circumstances that may include collateral characteristics, expectations of delinquency and default rates, loss severity and prepayment speeds and structural support, including subordination and guarantees. The corporate bond cash flow estimates are derived from scenario-based outcomes of expected corporate restructurings or the disposition of assets using bond specific facts and circumstances including timing, security interests and loss severity.

We have a process in place to identify debt securities that could potentially have a credit impairment that is other than temporary. This process involves monitoring late payments, pricing levels, downgrades by rating agencies, key financial ratios, financial statements, revenue forecasts and cash flow projections as indicators of credit issues. On a quarterly basis, we review all securities to determine whether an OTTI exists and whether losses should be recognized. We consider relevant facts and circumstances in evaluating whether a credit or interest rate-related impairment of a security is other than temporary. Relevant facts and circumstances considered include: (1) the extent and length of time the fair value has been below cost; (2) the reasons for the decline in value; (3) the financial position and access to capital of the issuer, including the current and future impact of any specific events; and (4) for fixed maturity securities, our intent to sell a security or whether it is more likely than not we will be required to sell the security before the recovery of its amortized cost which, in some cases, may extend to maturity.

The following table presents a roll-forward of the credit loss component of the amortized cost of debt securities that we have written down for OTTI and the credit component of the loss that is recognized in earnings. OTTI recognized in earnings for credit-impaired debt securities is presented as additions in two components based upon whether the current period is the first time the debt security was credit-impaired (initial credit impairment) or is not the first time the debt security was credit impairments). The credit loss component is reduced if we sell, intend to sell or believe we will be required to sell previously credit-impaired debt securities. Additionally, the credit loss component is reduced if we receive cash flows in excess of what we expected to receive over the remaining life of the credit-impaired debt security, the security matures or is fully written down. Changes in the credit loss component of credit-impaired debt securities were as follows for the periods ended June 30, 2013 and 2012.

Loan Origination/Risk Management: In the normal course of business the Company is exposed to a variety of operational, reputational, legal, regulatory and credit risks that could adversely affect our financial performance. Most of our asset risk is primarily tied to credit (lending) risk. The Company has lending policies, guidelines and procedures in place that are designed to maximize loan income within an acceptable level of risk. The Board of Directors reviews and approves these policies, guidelines and procedures. When we originate a loan we make certain subjective judgments about the borrower's ability to meet the loan's terms and conditions. We also make objective and subjective value assessments on the assets we finance. The borrower's ability to repay can be adversely affected by economic changes. Likewise, changes in market conditions and other external factors can affect asset valuations. The Company actively monitors the quality of its loan portfolio. A reporting system supplements the credit review process by providing management with frequent reports related to loan production, loan quality, concentrations of credit risk, loan delinquencies, troubled debt restructures, nonperforming and potential problem loans. Diversification in the loan portfolio is another means of managing risk associated with fluctuations in economic conditions.

With respect to construction loans to developers and builders that are secured by non-owner occupied properties, the Company generally requires the borrower to have had an existing relationship with the Company and have a proven record of success. Construction loans are underwritten utilizing feasibility studies, independent appraisal reviews, sensitivity analysis of absorption and lease rates and financial analyses of the developers and property owners. Construction loans are generally underwritten based upon estimates of costs and value associated with the complete project. These estimates may be inaccurate. Construction loans often involve the disbursement of substantial funds with repayment substantially dependent on the success of the ultimate project. Sources of repayment for these types of loans may be pre-committed permanent loans from approved long-term lenders, sales of developed property or an interim loan commitment from the Company until permanent financing is obtained. These loans are closely monitored by on-site inspections and are considered to have higher risks than other real estate loans due to their ultimate

repayment being sensitive to interest rate changes, governmental regulation of real property, general economic conditions and the availability of long-term financing.

Commercial real estate loans are subject to underwriting standards and processes similar to commercial loans, in addition to those of real estate loans. Commercial real estate loans may be riskier than loans for one-to-four family residences and are typically larger in dollar size. These loans are viewed primarily as cash flow loans and secondarily as loans secured by real estate. The repayment of these loans is generally largely dependent on the successful operation and management of the property securing the loan or the business conducted on the property securing the loan. Commercial real estate loans may be more adversely affected by conditions in the real estate markets or in the general economy. The properties securing the Company's commercial real estate portfolio are diverse in terms of type and geographic location within our market area. This diversity helps reduce the Company's exposure to adverse economic events that affect any single market or industry. Management monitors and evaluates commercial real estate loans based on collateral, geography and risk grade criteria. The Company also monitors economic conditions and trends affecting market areas it serves. In addition, management tracks the level of owner-occupied commercial real estate loans versus non-owner occupied loans.

Consumer loans may carry a higher degree of repayment risk than residential mortgage loans. Repayment is typically dependent upon the borrower's financial stability which is more likely to be adversely affected by job loss, illness, or personal bankruptcy. To monitor and manage consumer loan risk, policies and procedures have been developed and modified as needed. This activity, coupled with relatively small loan amounts that are spread across many individual borrowers, minimizes risk. Additionally, trend and outlook reports are reviewed by management on a regular basis. Underwriting standards for home equity loans are heavily influenced by statutory requirements, which include, but are not limited to, a maximum loan-to-value percentage of 80%, collection remedies, the number of such loans a borrower can have at one time and documentation requirements. Historically the Company's losses on consumer loans have been negligible.

The Company maintains an outsourced independent loan review program that reviews and validates the credit risk assessment program on a periodic basis. Results of these external independent reviews are presented to management. The external independent loan review process complements and reinforces the risk identification and assessment decisions made by lenders and credit risk management personnel.

Nonaccrual and Past Due Loans: Loans are considered past due if the required principal and interest payments have not been received as of the date such payments were due. Loans are placed on non-accrual status when, in management's opinion, the borrower may be unable to meet payment obligations as they become due, as well as when a loan is 90 days past due, unless the loan is well secured and in the process of collection, as required by regulatory provisions. Loans may be placed on non-accrual status regardless of whether or not such loans are considered past due. When interest accrual is discontinued, all unpaid accrued interest is reversed. Interest income is subsequently recognized only to the extent cash payments are received in excess of principal due. Loans are returned to accrual status when all the principal and interest amounts contractually due are brought current and future payments are reasonably assured.

An age analysis of past due loans by class at June 30, 2013 and December 31, 2012 follows:

Impaired Loans: Loans are considered impaired when, based on current information and events, it is probable the Company will be unable to collect amounts due in accordance with the original contractual terms of the loan agreement, including scheduled principal and interest payments.

All impaired loans have are assessed for recoverability based on an independent third-party full appraisal to determine the net realizable value ("NRV") based on the fair value of the underlying collateral, less cost to sell and other costs, such as unpaid real estate taxes, that have been identified, or the present value of discounted cash flows in the case of certain impaired loans that are not collateral dependent. The appraisal will be based on an "as-is" valuation and will follow a reasonable valuation method that addresses the direct sales comparison, income, and cost approaches to market value, reconciles those approaches, and explains the elimination of each approach not used. Appraisals are generally updated every 12 months or sooner if we have identified possible further deterioration in value. Prior to receiving the updated appraisal, we will establish a specific reserve for any estimated deterioration, based upon our assessment of market conditions, adjusted for estimated costs to sell and other identified costs. If the NRV is greater than the loan amount, then no impairment loss exists. If the NRV is less than the loan amount, the shortfall is recognized by a specific reserve. If the borrower fails to pledge additional collateral in the ninety day period, a charge-off equal to the difference between the loan carrying value and NRV will occur. In certain circumstances, however, a direct charge-off may be taken at the time that the NRV calculation reveals a shortfall. All impaired loans are evaluated based on the criteria stated above on a quarterly basis and any change in the reserve requirements are recorded in the period identified. All partially charged-off loans remain on nonaccrual status until they are brought current as to both principal and interest and have at least nine months of payment history and future collectability of principal and interest is assured.

Impaired loans at June 30, 2013 and December 31, 2012 are set forth in the following tables.

Troubled debt restructurings: Periodically management evaluates our loans in order to determine the appropriate risk rating, interest accrual status and potential classification as a TDR, some of which are performing and accruing interest. A TDR is a loan on which we have granted a concession due to a borrower's financial difficulty. These are concessions that would not otherwise be considered. The terms of these modified loans may include extension of maturity, renewals, changes in interest rate, additional collateral requirements or infusion of additional capital into the project by the borrower to reduce debt or to support future debt service. On construction and land development loans we may modify the loan as a result of delays or other project issues such as slower than anticipated sell-outs, insufficient leasing activity and/or a decline in the value of the underlying collateral securing the loan. Management believes that working with a borrower to restructure a loan provides us with a better likelihood of collecting our loan. It is our policy not to renegotiate the terms of a commercial loan simply because of a delinquency status. However, we will use our Troubled Debt Restructuring Program to work with delinquent borrowers when the delinquency is temporary. We consider all loans modified in a troubled debt restructuring to be impaired.

At the time a loan is modified in a TDR, we consider the following factors to determine whether the loan should accrue interest:

- Whether there is a period of current payment history under the current terms, typically 6 months;
 - Whether the loan is current at the time of restructuring; and
- Whether we expect the loan to continue to perform under the restructured terms with a debt coverage ratio that complies with the Bank's credit underwriting policy of 1.25 times debt service.

We also review the financial performance of the borrower over the past year to be reasonably assured of repayment and performance according to the modified terms. This review consists of an analysis of the borrower's historical results; the borrower's projected results over the next four quarters; current financial information of the borrower and any guarantors. The projected repayment source needs to be reliable, verifiable, quantifiable and sustainable. In addition, all TDRs are reviewed quarterly to determine the amount of any impairment.

At the time of restructuring, the amount of the loan principal for which we are not reasonably assured of repayment is charged-off, but not forgiven.

A borrower with a restructured loan must make a minimum of six consecutive monthly payments at the restructured level and be current as to both interest and principal to be on accrual status.

Performing TDRs (not reported as non-accrual loans) totaled \$39.5 million and \$40.0 million with related allowances of \$1.4 million and \$1.4 million as of June 30, 2013 and December 31, 2012, respectively. Non-performing TDRs totaled \$23.6 million and \$27.1 million with related allowances of \$0 and \$8,000 as of June 30, 2013 and December 31, 2012, respectively. All TDRs are classified as impaired loans and are included in the impaired loan disclosures above.

The following tables detail loans modified during the six months and three months ended June 30, 2013 and 2012, including the number of modifications, the recorded investment both pre- and post-modification and the nature of the modifications made.

Some loan modifications classified as TDRs may not ultimately result in the full collection of principal and interest, as modified, and result in potential incremental losses. These potential incremental losses have been factored into our overall allowance for loan losses estimate. The level of any re-defaults will likely be affected by future economic conditions. Once a loan becomes a TDR, it will continue to be reported as a TDR until it is repaid in full, foreclosed, sold or it meets the criteria to be removed from TDR status.

Credit Quality Indicators: As part of the on-going monitoring of the credit quality of the Company's loan portfolio, management tracks certain credit quality indicators including trends related to the risk grades of loans, the level of classified loans, net charge-offs, nonperforming loans (see details above) and the general economic conditions in the region.

The Company utilizes a risk grading matrix to assign a risk grade to each of its loans. Loans are graded on a scale of 1 to 7. Grades 1 through 4 are considered "Pass". A description of the general characteristics of the seven risk grades is as follows:

- 1. Good: Borrower exhibits the strongest overall financial condition and represents the most creditworthy profile.
- 2. Satisfactory (A): Borrower reflects a well-balanced financial condition, demonstrates a high level of creditworthiness and typically will have a strong banking relationship with the Bank.
- 3. Satisfactory (B): Borrower exhibits a balanced financial condition and does not expose the Bank to more than a normal or average overall amount of risk. Loans are considered fully collectable.
- 4. Watch List: Borrower reflects a fair financial condition, but there exists an overall greater than average risk. Risk is deemed acceptable by virtue of increased monitoring and control over borrowings. Probability of timely repayment is present.
- 5. Other Assets Especially Mentioned (OAEM): Financial condition is such that assets in this category have a potential weakness or pose unwarranted financial risk to the Bank even though the asset value is not currently impaired. The asset does not currently warrant adverse classification but if not corrected could weaken and could create future increased risk exposure. Includes loans which require an increased degree of monitoring or servicing as a result of internal or external changes.
- 6. Substandard: This classification represents more severe cases of #5 (OAEM) characteristics that require increased monitoring. Assets are characterized by the distinct possibility that the Bank will sustain some loss if the deficiencies are not corrected. Assets are inadequately protected by the current net worth and paying capacity of the borrower or of the collateral. Asset has a well-defined weakness or weaknesses that impairs the ability to repay debt and jeopardizes the timely liquidation or realization of the collateral at the asset's net book value.
- 7. Doubtful: Assets which have all the weaknesses inherent in those assets classified #6 (Substandard) but the risks are more severe relative to financial deterioration in capital and/or asset value; accounting/evaluation techniques may be questionable and the overall possibility for collection in full is highly improbable. Borrowers in this category require constant monitoring, are considered work-out loans and present the potential for future loss to the Bank.

An analysis of the credit risk profile by internally assigned grades as of June 30, 2013 and December 31, 2012 is as follows:

At June 30, 2013			Pas	SS	OAl		Substandar Amounts in tho		Doubtful		Total

NOTE 5. ALLOWANCE FOR LOAN LOSSES

The allowance for loan losses is a reserve established through a provision for loan losses charged to expense, which represents management's best estimate of probable losses that have been incurred within the existing portfolio of loans. The allowance, in the judgment of management, is necessary to reserve for estimated loan losses and risks inherent in the loan portfolio. The Company's allowance for loan loss methodology includes allowance allocations calculated in accordance with ASC Topic 310, "Receivables" and allowance allocations calculated in accordance with ASC Topic 450, "Contingencies." Accordingly, the methodology is based on historical loss experience by type of credit and internal risk grade, specific homogeneous risk pools and specific loss allocations, with adjustments for current events and conditions. The Company's process for determining the appropriate level of the allowance for loan losses is designed to account for credit deterioration as it occurs. The provision for loan losses reflects loan quality trends, including the levels of, and trends related to, nonaccrual loans, past due loans, potential problem loans, criticized loans and net charge-offs or recoveries, among other factors. The provision for possible loan losses also reflects the totality of actions taken on all loans for a particular period. In other words, the amount of the provision reflects not only the necessary increases in the allowance for loan losses related to newly identified criticized loans, but it also reflects actions taken related to other loans including, among other things, any necessary increases or decreases in required allowances for specific loans or loan pools.

The level of the allowance reflects management's continuing evaluation of industry concentrations, specific credit risks, loan loss experience, current loan portfolio quality, present economic, political and regulatory conditions and unidentified losses inherent in the current loan portfolio. Portions of the allowance may be allocated for specific credits; however, the entire allowance is available for any credit that, in management's judgment, should be charged off. While management utilizes its best judgment and information available, the ultimate adequacy of the allowance is dependent upon a variety of factors beyond the Company's control, including, among other things, the performance of the Company's loan portfolio, the economy, changes in interest rates and the view of the regulatory authorities toward loan classifications.

The allowances established for probable losses on specific loans are based on a regular analysis and evaluation of problem loans. Loans are classified based on an internal credit risk grading process that evaluates, among other things: (i) the obligor's ability to repay; (ii) the underlying collateral, if any; and (iii) the economic environment and industry in which the borrower operates. This analysis is performed at the relationship manager level for all commercial loans. When a loan has a grade of 6 or higher, the loan is analyzed to determine whether the loan is impaired and, if impaired, whether there is a need to specifically allocate a portion of the allowance for loan losses to the loan. Specific valuation allowances are determined by analyzing the borrower's ability to repay amounts owed, any collateral deficiencies, the relative risk grade of the loan and economic conditions affecting the borrower's industry, among other things.

Historical valuation allowances are calculated based on the historical loss experience of specific types of loans. The Company calculates historical loss ratios for pools of similar loans with similar characteristics based on the proportion of actual charge-offs experienced to the total population of loans in the pool. The historical loss ratios are periodically updated based on actual charge-off experience. A historical valuation allowance is established for each pool of similar loans based upon the product of the historical loss ratio and the total dollar amount of the loans in the pool. The Company's pools of similar loans include similarly risk-graded groups of commercial loans, commercial real estate loans, consumer real estate loans and consumer and other loans.

General valuation allowances are based on general economic conditions and other qualitative risk factors both internal and external to the Company. In general, such valuation allowances are determined by evaluating, among other things: (i) the experience, ability and effectiveness of the Bank's lending management and staff; (ii) the effectiveness of the Bank's loan policies, procedures and internal controls; (iii)

changes in asset quality; (iv) changes in loan portfolio volume; (v) the composition and concentrations of credit; (vi) the impact of competition on loan structuring and pricing; (vii) the effectiveness of the internal loan review function; (viii) the impact of environmental risks on portfolio risks; and (ix) the impact of rising interest rates on portfolio risk. Management evaluates the degree of risk that each one of these components has on the quality of the loan portfolio on a quarterly basis. Each component is determined to have either a high, high-moderate, moderate, low-moderate or low degree of risk. The results are then input into a "general allocation matrix" to determine an appropriate general valuation allowance.

An analysis of the allowance for loan losses for the six month and three month periods ended June 30, 2013 and 2012 is as follows:

NOTE 6. REGULATORY RESTRICTIONS

The Company and the Bank are subject to various regulatory capital requirements of federal and state banking agencies. Failure to meet minimum capital requirements can initiate certain mandatory and possibly additional discretionary actions by regulators that, if undertaken, could have a direct material effect on the Company's financial statements. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, the Company and the Bank must meet specific capital guidelines that involve quantitative measures of assets, liabilities, and certain off-balance sheet items as calculated under regulatory accounting practices. The Company and the Bank's capital amounts and classification are also subject to qualitative judgments by the regulators about components, risk weightings, and other factors. Prompt corrective action provisions are not applicable to bank holding companies.

Quantitative measures established by regulation to ensure capital adequacy require the Company and the Bank to maintain minimum amounts and ratios (set forth in the following table) of total and Tier 1 capital (as defined in the regulations) to risk-weighted assets (as defined), and of Tier 1 capital (as defined) to average assets (as defined).

On October 3, 2008 Congress passed the Emergency Economic Stabilization Act of 2008 (EESA), which provides the U.S. Secretary of the Treasury with broad authority to implement certain actions to help restore stability and liquidity to the U.S. markets. One of the provisions resulting from the EESA was the Treasury Capital Purchase Program (CPP) which provided for the direct equity investment of perpetual preferred stock by the U.S. Treasury in qualified financial institutions. This program was voluntary and required an institution to comply with several restrictions and provisions, including limits on executive compensation, stock redemptions, and declaration of dividends. The perpetual preferred stock has a dividend rate of 5% per year until the fifth anniversary of the Treasury investment and a dividend rate of 9%, thereafter. The CPP also required the Treasury to receive a warrant to purchase shares of common stock equal to 15% of the capital invested by the U.S. Treasury. The Company received an investment in perpetual preferred stock of \$16,288,000 on January 30, 2009. These proceeds were allocated between the preferred stock and the warrant based

on relative fair value in accordance with FASB ASC Topic 470-20, "Debt with Conversion and Other Options." The allocation of proceeds resulted in a discount on the preferred stock that is being accreted over five years. The Company issued a warrant to purchase 329,757 shares of common stock to the U.S. Treasury and \$930,000 of those proceeds was allocated to the warrant. The warrant was accounted for as equity securities. The warrant had a contractual life of 10 years and an exercise price of \$6.12 per share of common stock. In November of 2012, the U.S. Treasury held an auction and sold its investment in the preferred stock to institutional investors. Restrictions related to the CPP have been lifted. In May of 2013, the U.S. Treasury held an auction to sell the warrant and the Company was the successful bidder thereby redeeming the outstanding warrant from the U.S. Treasury at a cost of \$1.7 million.

NOTE 7. OTHER COMPREHENSIVE INCOME

The Company's accumulated other comprehensive income consisted of the following at June 30, 2013 and December 31, 2012:

	June 30, 2013		Ι	December 3 2012	1,
		n thousands)

Minimum pension liability	(144)		(244)
Tax impact	573			497	
Other comprehensive income	\$ (858)	\$	(745)

NOTE 8. FAIR VALUE

Fair Value Measurements

The Company uses fair value measurements to record fair value adjustments to certain assets and liabilities and to determine fair value disclosures. In accordance with the Fair Value Measurements and Disclosures Topic 820 of FASB ASC, the fair value of a financial instrument is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value is best determined based upon quoted market prices. However, in many instances, there are no quoted market prices for the Company's various financial instruments. In cases where quoted market prices are not available, fair values are based on estimates using present value or other valuation techniques. Those techniques are significantly affected by the assumptions used, including the discount rate and estimates of future cash flows. Accordingly, the fair value estimates may not be realized in an immediate settlement of the instrument.

The fair value guidance provides a consistent definition of fair value, which focuses on exit price in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. If there has been a significant decrease in the volume and level of activity for the asset or liability, a change in valuation technique or the use of multiple valuation techniques may be appropriate. In such instances, determining the price at which willing market participants would transact at the measurement date under current market conditions depends on the facts and circumstances and requires the use of significant judgment. The fair value is a reasonable point within the range that is most representative of fair value under current market conditions. In accordance with this guidance, the Company groups its assets and liabilities carried at fair value in three levels as follows:

Level 1 Input:

1) Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities.

Level 2 Inputs:

- 1) Quoted prices for similar assets or liabilities in active markets.
- 2) Quoted prices for identical or similar assets or liabilities in markets that are not active.

3) Inputs other than quoted prices that are observable, either directly or indirectly, for the term of the asset or liability (e.g., interest rates, yield curves, credit risks, prepayment speeds or volatilities) or "market corroborated inputs."

Level 3 Inputs:

- 1) Prices or valuation techniques that require inputs that are both unobservable (i.e. supported by little or no market activity) and that are significant to the fair value of the assets or liabilities.
- 2) These assets and liabilities include financial instruments whose value is determined using pricing models, discounted cash flow methodologies, or similar techniques, as well as instruments for which the determination of fair value requires significant management judgment or estimation.

Fair Value on a Recurring Basis:

The following is a description of the Company's valuation methodologies for assets carried at fair value. These methods may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while the Company believes that its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting measurement date.

Investment Securities Available for Sale:

Where quoted prices are available in an active market, securities are classified in Level 1 of the valuation hierarchy. Securities in Level 1 are exchange-traded equities. If quoted market prices are not available for the specific security, then fair values are provided by independent third-party valuations services. These valuations services estimate fair values using pricing models and other accepted valuation methodologies, such as quotes for similar securities and observable yield curves and spreads. As part of the Company's overall valuation process, management evaluates these third-party methodologies to ensure that they are representative of exit prices in the Company's principal markets. Securities in Level 2 include U.S. Government agencies, mortgage-backed securities, state and municipal securities and trust preferred securities.

Securities in Level 3 include thinly-traded and collateralized debt obligations. With the assistance of competent third-party valuation specialists, the Company utilized the following methodology to determine the fair value:

Cash flows were developed based on the estimated speeds at which the TruPS are expected to prepay (a range of 1% to 2%), the estimated rates at which the TruPS are expected to defer payments, the estimated rates at which the TruPS are expected to default (a range of 0.57% to 0.66%), and the severity of the losses on securities which default (95%). TruPS generally allow for prepayment by the issuer without a prepayment penalty any time after five years. Due to the lack of new TruPS and the relatively poor conditions of the financial institution industry, a relatively modest rate of prepayment was assumed going forward. Estimates for CDRs are based on the payment characteristics of the TruPS themselves (e.g. current, deferred, or defaulted) as well as the financial condition of the TruPS issuers in the pool. Estimates for the near-term rates of deferral and CDR are based on key financial ratios relating to the financial institutions' capitalization, asset quality, profitability and liquidity. Finally, we consider whether or not the financial institution has received TARP funding, and if it has, the amount. Longer-term rates of deferral and defaults are based on historical averages. The fair value of each bond was assessed by discounting its projected cash flows by a discount rate. The discount rates were based on the yields of publicly traded TruPS and preferred stock issued by comparably rated banks (3 month LIBOR plus a spread of 400 to 959 basis points).

The table below presents the balances of assets and liabilities measured at fair value on a recurring basis.

Financial Assets	Level 1	Level 2 (Amounts	Level 3 in thousands)	Total	
Securities Available for Sale		·	ŕ		
As of June 30, 2013					
U.S. Government sponsored entities	\$ —	\$7	\$	\$7	
Corporate debt obligations	_	507	_	507

Collateralized debt obligations	_	_	4,031	4,031	
Total	\$ —	\$13,500	\$4,031	\$17,531	
As of December 31, 2012					
U.S. Government sponsored entities	\$—	\$7	\$—	\$7	
Corporate debt obligations		1,524		1,524	
Residential mortgage-backed securities		12,899		12,899	
Collateralized mortgage-backed securities		968	6	974	
Collateralized debt obligations	_	_	3,936	3,936	
Total	\$—	\$15,398	\$3,942	\$19,340	

For the six months ending June 30, 2013, there were no transfers between the levels within the fair value hierarchy.

The changes in Level 3 assets measured at fair value on a recurring basis are summarized as follows for the six months ending June 30:

	Securities Available for Sale						
		2013		2012			
		ts in thousand	iousands)				
Beginning balance at January 1,	\$	3,942	\$	4,122			
Total net losses included in:							
Net loss							
Other comprehensive income (loss)		89		(88))		
Settlements		_		_			
Net transfers into Level 3		_		_			
Ending balance	\$	4,031	\$	4,034			

Fair Value on a Non-recurring Basis:

Certain assets and liabilities are not measured at fair value on an ongoing basis but are subject to fair value adjustments in certain circumstances (for example, when there is evidence of impairment).

Financial Assets	Level 1	Level 2 (Amounts	Total		
As of June 30, 2013					
Collateral dependent impaired loans	\$ —	\$ —	\$55,021	\$55,021	
OREO	_	_	23,669	23,669	
As of December 31, 2012					
Collateral dependent impaired loans	\$—	\$	\$56,620	\$56,620	
OREO	_	_	26,057	26,057	

Collateral dependent impaired loans, which are measured in accordance with FASB ASC Topic 310 "Receivables", for impairment, had a carrying amount of \$55.0 million and \$56.6 million at June 30, 2013 and December 31, 2012 respectively, with a valuation allowance of \$2.2 million and \$547 thousand at June 30, 2013 and December 31, 2012, respectively. The valuation allowance for collateral dependent impaired loans is included in the allowance for loan losses on the balance sheet. All collateral dependent impaired loans have an independent third-party full appraisal to determine the NRV based on the fair value of the underlying collateral, less cost to sell (a range of 5% to 10%) and other costs, such as unpaid real estate taxes, that have been identified, or the present value of discounted cash flows in the case of certain impaired loans that are not collateral dependent. The appraisal will be based on an "as-is" valuation and will follow a reasonable valuation method that addresses the direct sales comparison, income, and cost approaches to market value, reconciles those approaches, and explains the elimination of each approach not used. Appraisals are updated every 12 months or sooner if we have identified possible further deterioration in value.

OREO consists of commercial real estate properties which are recorded at fair value based upon current appraised value less estimated disposition costs, which is adjusted based upon management's review and changes in market conditions (Level 3 inputs). Properties are reappraised annually.

Fair Value of Financial Instruments

The Company discloses estimated fair values for its significant financial instruments in accordance with FASB ASC Topic 825, "Disclosures about Fair Value of Financial Instruments". The methodologies for estimating the fair value of financial assets and liabilities that are measured at fair value on a recurring or non-recurring basis are discussed above. The methodologies for estimating the fair value of other financial assets and liabilities are discussed below.

For certain financial assets and liabilities, carrying value approximates fair value due to the nature of the financial instrument. These instruments include cash and cash equivalents, restricted stock, accrued interest receivable, demand and other non-maturity deposits and accrued interest payable.

The Company used the following methods and assumptions in estimating the fair value of the following financial instruments:

Investment Securities: Fair value of securities available for sale is described above. Fair value of held to maturity securities is based upon quoted market prices (Level 2 inputs).

Loans (other than impaired): Fair values are estimated for portfolios of loans with similar financial characteristics. Loans are segregated by type such as commercial, residential mortgage and other consumer. Each loan category is further segmented into groups by fixed and adjustable rate interest terms and by performing and non-performing categories. The fair value of performing loans is calculated by discounting scheduled cash flows through their estimated maturity using estimated market discount rates that reflect the credit and interest rate risk inherent in each group of loans (Level 2 inputs). The estimate of maturity is based on contractual maturities for loans within each group, or on the Company's historical experience with repayments for each loan classification, modified as required by an estimate of the effect of current economic conditions.

Deposits: The fair value of time deposits is based on the discounted value of contractual cash flows, where the discount rate is estimated using the market rates currently offered for deposits of similar remaining maturities (Level 2 inputs).

Borrowings: The fair values of FHLB borrowings, other borrowed funds and subordinated debt are based on the discounted value of estimated cash flows. The discounted rate is estimated using market rates currently offered for similar advances or borrowings (Level 2 inputs).

Bank premises and equipment, customer relationships, deposit base and other information required to compute the Company's aggregate fair value are not included in the above information. Accordingly, the above fair values are not intended to represent the aggregate fair value of the Company.

The following table summarizes the carrying amounts and fair values for financial instruments at June 30, 2013 and December 31, 2012:

	Level In	June 30, 2013		December 31,	2012
	Fair Value	Carrying	Fair	Carrying	Fair
	Hierarchy	Value	Value	Value	Value
	(Amounts in	thousands)

Accrued interest payable	Level 2	475	475	537	537

- (1) See the recurring fair value table above.
- (2) For non-impaired loans, Level 2; for impaired loans, Level 3.

NOTE 9. INCOME TAXES

	For the six mo		For the three n June	
	2013	2012 (Amount in	2013 thousands)	2012
Income Taxes			,	
Pre-tax Income Income Tax Expense	\$ 7,182 2,810	\$ 5,413 1,529	\$ 3,568 1,397	\$ 2,247 257

For the six months ended June 30, 2013, the Company recorded a net tax expense of \$2.8 million compared to a net tax expense of \$1.5 million for the six months ended June 30, 2012. For the three months ended June 30, 2013, the Company recorded a net tax expense of \$1.4 million compared to a net tax expense of \$257 thousand for the three months ended June 30, 2012.

Deferred federal and state tax assets are reduced by a valuation allowance when, in the opinion of management, it is more likely than not that some portion or all of the deferred tax assets will not be realized. The lower level of income tax expense in the 2012 periods as compared to the comparable periods in 2013 is due to lower earnings and the change to an alternative tax methodology for bank owned life insurance ("BOLI") income whereby it is treated on a tax free basis.

NOTE 10. EARNINGS PER SHARE ("EPS")

The following tables set forth the calculation of basic and diluted EPS for the six month and three month periods ending June 30, 2013 and 2012.

	For the six m June 30,	onths ended	For the three months ended June 30,			
	2013	2012	2013	2012		
	(Amounts in		(Amoutns in thousands			
	except share	data)	except share data)			
Basic earnings per common share						
Net income available to common shareholders	\$3,615	\$3,132	1,732	1,596		
Average common shares outstanding	5,944,915	5,916,502	5,962,623	5,917,118		
Basic earnings per common share	\$0.61	\$0.53	0.29	0.27		
Diluted earnings per common share						
Net income available to common shareholders	\$3,615	\$3,132	1,732	1,596		
Average common shares outstanding	5,944,915	5,916,502	5,962,623	5,917,118		
Dilutive potential common shares		_	1,021	_		
Total diluted average common shares outstanding	5,944,915	5,916,502	5,963,644	5,917,118		
Diluted earnings per common share	\$0.61	\$0.53	0.29	0.27		

For the six months ended June 30, 2013 and 2012, options to purchase 356,143 shares and 343,035 shares, respectively, were outstanding but were not included in the computation of diluted EPS because the options' common stock equivalents were antidilutive.

In May of 2013 the Company paid a 10% common stock dividend to shareholders. All weighted share information has been retroactively adjusted to give effect to this stock dividend for the periods presented.

NOTE 11. SUBSEQUENT EVENTS

Accounting guidance establishes general standards of accounting for and disclosure of events that occur after the balance sheet date but before financial statements are issued or are available to be issued. Accordingly, Management has evaluated subsequent events after June 30, 2013 through the date the financial statements were issued and determined that no subsequent events warranted recognition in or disclosure in the interim financial statements.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Forward-Looking Statements

The Company may from time to time make written or oral "forward-looking statements" including statements contained in this Report and in other communications by the Company which are made in good faith pursuant to the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995. These forward-looking statements, such as statements of the Company's plans, objectives, expectations, estimates and intentions, involve risks and uncertainties and are subject to change based on various important factors (some of which are beyond the Company's control). The following factors, among others, could cause the Company's financial performance to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements: the strength of the United States economy in general and the strength of the local economies in which the Company conducts operations; the effects of, and changes in, trade, monetary and fiscal policies and laws, including interest rate policies of the Board of Governors of the Federal Reserve System, the impact of the Bank's compliance with the Consent Orders entered into with the FDIC and the Department, inflation, interest rate, market and monetary fluctuations; the timely development of and acceptance of new products and services of the Company and the perceived overall value of these products and services by users, including the features, pricing and quality compared to competitors' products and services; the impact of changes in financial services laws and regulations (including laws concerning taxes, banking, securities and insurance); technological changes; acquisitions; changes in consumer spending and saving habits; and the success of the Company at managing the risks involved in the foregoing.

The Company cautions that the foregoing list of important factors is not exclusive. The Company also cautions readers not to place undue reliance on these forward-looking statements, which reflect management's analysis only as of the date on which they are given. The Company is not obligated to publicly revise or update these forward-looking statements to reflect events or circumstances that arise after any such date.

General

The Company's results of operations are dependent primarily on net interest income, which is the difference between the interest income earned on its interest-earning assets, such as loans and securities, and the interest expense paid on its interest-bearing liabilities, such as deposits and borrowings. The Company also generates non-interest income such as service charges, gains from the sale of loans, earnings from BOLI, loan exit fees and other fees. The Company's non-interest expenses primarily consist of employee compensation and benefits, occupancy expenses, marketing expenses, data processing costs and other operating expenses. The Company is also subject to losses in its loan portfolio if borrowers fail to meet their obligations. The Company's results of operations are also significantly affected by general economic and competitive conditions, particularly changes in market interest rates, government policies and actions of regulatory agencies.

The Company is intently focused on managing its non-performing assets. The deterioration of the local real estate market and the continued high levels of unemployment have had a significant negative impact on the credit quality of our loan portfolio. Management has allocated significant resources to resolve these issues, either through foreclosure or working with borrowers to bring the loans current. New processes have been implemented to identify and monitor impaired loans. New appraisals of the collateral securing impaired loans have been obtained to identify any potential exposure. The lengthy process of foreclosure has had a negative impact on earnings due to higher levels of legal fees.

Comparison of Financial Condition at June 30, 2013 and December 31, 2012

At June 30, 2013, the Company's total assets decreased to \$738.4 million from \$770.5 million at December 31, 2012, a decrease of \$32.1 million or 4.2%. The decrease was due to a decrease in cash.

Cash and cash equivalents decreased \$39.8 million to \$37.1 million at June 30, 2013 from \$76.9 million at December 31, 2012 due to a planned payoff of certificates of deposit.

Total investment securities decreased to \$19.6 million at June 30, 2013 (\$17.5 million classified as available for sale or 89.4%) from \$21.4 million at December 31, 2012, a decrease of \$1.8 million or 8.4% due to principal payments on mortgage-backed securities.

Management evaluates the investment portfolio for OTTI on a quarterly basis. Factors considered in the analysis include, but are not limited to, whether an adverse change in cash flows has occurred, the length of time and the extent to which the fair value has been less than cost, whether the Company intends to sell, or will more likely than not be required to sell, the investment before recovery of its amortized cost basis, which may be maturity, credit rating downgrades, the percentage of performing collateral that would need to default or defer to cause a break in yield or a temporary interest shortfall, and management's assessment of the financial condition of the underlying issuers. For the three months and the six months ended June 30, 2013, the Company did not recognize any credit-related OTTI charges.

Total gross loans increased to \$644.0 million at June 30, 2013 from \$629.7 million at December 31, 2012, an increase of \$14.3 million or 2.3%.

Delinquent loans totaled \$50.9 million or 7.9% of total loans at June 30, 2013, a decrease of \$5.1 million from December 31, 2012. Delinquent loan balances by number of days delinquent were: 30 to 89 days --- \$5.6 million; 90 days and greater not accruing interest --- \$45.3 million.

At June 30, 2013, the Company had \$45.3 million in nonaccrual loans or 7.0% of total loans, a decrease from \$47.5 million or 7.6% of total loans at December 31, 2012. The three largest relationships in nonperforming loans are a \$7.7 million retail center construction loan, a \$7.5 residential and commercial development loan, and a \$6.4 million retail center construction loan.

The composition of nonaccrual loans as of June 30, 2013 and December 31, 2012 was as follows:

	June 30, 2013			D	,	
		•		xcept ratios)		
Commercial and Industrial	\$	130		\$	248	
Real Estate Construction:						
Residential		845			799	
Commercial		12,961			12,958	
Real Estate Mortgage:						
Commercial – Owner Occupied		1,058			1,218	
Commercial – Non-owner Occupied		19,118			19,228	
Residential – 1 to 4 Family		9,421			10,072	
Residential – Multifamily		1,467			2,838	
Consumer		252			188	
Total	\$	45,252		\$	47,549	
Nonperforming loans to total loans		7.0	%		7.6	%

At June 30, 2013, the Company's allowance for loan losses was \$20.9 million, an increase of \$1.9 million from December 31, 2012. The ratio of allowance for loan losses to total loans increased to 3.2% at June 30, 2013 from 3.0% at December 31, 2012. During the six month period ended June 30, 2013, the Company charged-off \$69,000 in loans, net of recoveries. Specific allowances for loan losses have been established in the amount of \$3.3 million on impaired loans totaling \$85.7 million at June 30, 2013. We have provided for all losses that are both probable and reasonably estimable at June 30, 2013 and December 31, 2012. There can be no assurance, however, that further additions to the allowance will not be required in future periods.

The negative economic trends that began in 2008, including the weakness in the residential and commercial real estate markets and high levels of unemployment, have had a significant impact on the credit quality of our loan portfolio. We are aggressively managing all loan relationships by enhancing our credit monitoring and tracking systems. New processes have been established to manage delinquencies. We are working closely with borrowers to resolve these non-performing loans. Updated appraisals are being obtained, where appropriate, to ensure that collateral values are sufficient to cover outstanding loan balances, and we are establishing specific reserves for any potential shortfall. With all these measures in place our nonperforming assets have decreased from 9.6% of total assets at December 31, 2012 to 9.3% at June 30, 2013. See Note 4 – Loans for additional information. Cash flow-dependent commercial real estate properties are being visited to inspect current tenant lease status. Where necessary, we will apply our loan work-out experience to protect our collateral position.

OREO at June 30, 2013 was \$23.7 million, compared to \$26.1 million at December 31, 2012 and \$26.7 million at June 30, 2012, the largest being a condominium development valued at \$12.7 million. This property was sold in 2010 but does not qualify for a sales treatment under GAAP.

An analysis of OREO activity is as follow:

	For the Six Months Ended June 30,								
		2013			2012				
		(Amounts in thousands)							
Balance at beginning of period	\$	26,057		\$	19,410				
Real estate acquired in settlement of loans		1,160			8,981				
Sales of real estate		(3,157)		(1,246)			
Loss on sale of real estate		(50)		(348)			
Write-down of real estate carrying values		(404)		(277)			
Capitalized improvements to real estate		63			207				
Balance at end of period	\$	23,669		\$	26,727				

At June 30, 2013, the Bank's total deposits decreased to \$609.5 million from \$637.2 million at December 31, 2012, a decrease of \$27.7 million or 4.3%. The decrease was the result of a planned runoff of higher priced certificates of deposits.

At June 30, 2013, total shareholders' equity increased to \$85.9 million from \$83.6 million at December 31, 2012, an increase of \$2.3 million, or 2.7% due to the retention of earnings from the period. In addition, during the second quarter, the Company redeemed the outstanding warrant that was issued to the U.S. Treasury in connection with TARP, reducing shareholders' equity by \$1.7 million.

Comparison of Operating Results for the Six Months Ended June 30, 2013 and 2012

General: Net income available to common shareholders for the six months ended June 30, 2013 was \$3.6 million, compared to \$3.1 million for the same period in 2012. The change was impacted by the following:

Interest Income: Interest income decreased \$1.2 million, or 6.5%, to \$18.3 million for the six months ended June 30, 2013, from \$19.5 million for the six months ended June 30, 2012. The decrease is attributable to lower yield on loans. Average loans for the six month period ended June 30, 2013 were \$634.1 million compared to \$617.4 million for the same period last year. The average yield on loans was 5.66% for the six months ended June 30, 2013 compared to 6.15% for the same period in 2012.

Interest Expense: Interest expense decreased \$844,000 to \$3.1 million for the six months ended June 30, 2013, from \$3.9 million for the six months ended June 30, 2012. The decrease is primarily attributable to a lower average cost of deposits as the Bank has been able to re-price deposits due to the current, historically low, interest rate environment and the drop in the average deposit balances. The average rate paid on deposits for the six month period ended June 30, 2013 was 0.90% compared to 1.13% for the same period last year.

Net Interest Income: Net interest income decreased \$419,000 to \$15.2 million for the six months ended June 30, 2013, as compared to the same period last year. We experienced an increase in our net interest rate spread of seven basis points, to 4.18% for the six months ended June 30, 2013, from 4.11% for the same period last year. Our net interest margin increased six basis points to 4.29% for the six months ended June 30, 2013, from 4.23% for the same period last year.

Provision for Loan Losses: We recorded a provision for loan losses of \$2.0 million for the six months ended June 30, 2013, a decrease of \$2.3 million from the same period last year. The decline in the provision for loan losses correlates to the recent stabilization of the loan portfolio, modest charge-offs during the last six months and management's analysis of non-performing loans, and credit risks inherent in the overall loan portfolio.

Non-interest Income: Non-interest income was \$2.0 million for the six months ended June 30, 2013, compared to \$1.6 million for the same period last year. The increase was primarily attributable to a decreased level of OREO losses of \$170,000, a higher gain on the sale of SBA loans of \$111,000 and an increase in loan fees of \$164,000.

Non-interest Expense: Non-interest expense increased \$458,000 to \$8.0 million for the six months ended June 30, 2013, from \$7.5 million for the six months ended June 30, 2012. The increase was primarily due to an increase in compensation and benefits of \$530,000 resulting from additional staff, salary increases and increased benefit costs.

Income Taxes: The Company recorded income tax expense of \$2.8 million, on income before taxes of \$7.2 million for the six months ended June 30, 2013, resulting in an effective tax rate of 39.1%, compared to income tax expense of \$1.5 million on income before taxes of \$5.4 million for the same period in 2012, resulting in an effective tax rate of 28.2%. The increase in income tax expense is due to the increase in pre-tax income in the 2013 period.

Comparison of Operating Results for the Three Months Ended June 30, 2013 and 2012

General: Net income available to common shareholders for the three months ended June 30, 2013 was \$1.7 million, compared to \$1.6 million for the same period in 2012. The change was impacted by the following:

Interest Income: Interest income decreased \$699,000, or 7.2%, to \$9.0 million for the three months ended June 30, 2013, from \$9.7 million for the three months ended June 30, 2012. The decrease is attributable to lower yield on loans. Average loans for the three month period ended June 30, 2013 were \$637.2 million compared to \$614.8 million for the same period last year. The average yield on loans was 5.52% for the three months ended June 30, 2013 compared to 6.12% for the same period in 2012.

Interest Expense: Interest expense decreased \$427,000 to \$1.5 million for the three months ended June 30, 2013, from \$1.9 million for the three months ended June 30, 2012. The decrease is primarily attributable to a lower average cost of deposits as the Bank has been able to re-price deposits due to the current, historically low, interest rate environment and the drop in the average deposit balances. The average rate paid on deposits for the three month period ended June 30, 2013 was 0.88% compared to 1.09% for the same period last year.

Net Interest Income: Net interest income decreased \$272,000 to \$7.5 million for the three months ended June 30, 2013, as compared to \$7.8 million for the same period last year. We experienced an increase in our net interest rate spread of six basis points, to 4.15% for the three months ended June 30, 2013, from 4.09% for the same period last year. Our net interest margin increased five basis points to 4.26% for the three months ended June 30, 2013, from 4.21% for the same period last year.

Provision for Loan Losses: We recorded a provision for loan losses of \$1.0 million for the three months ended June 30, 2013, a decrease of \$1.1 million from the same period last year. The decline in the provision for losses correlates to the recent stabilization of the loan portfolio, modest charge-offs during the last three months and management's analysis of non-performing loans, and credit risks inherent in the overall loan portfolio.

Non-interest Income: Non-interest income was \$1.3 million for the three months ended June 30, 2013, compared to \$531,000 for the same period last year. The increase was primarily attributable to lower OREO losses of \$446,000 and a higher gain on the sale of SBA loans of \$214,000.

Non-interest Expense: Non-interest expense increased \$237,000 to \$4.2 million for the three months ended June 30, 2013, from \$4.0 million for the three months ended June 30, 2012. The increase was primarily due to an increase in compensation and benefits of \$314,000 resulting from additional staff, salary increases and increased benefit costs.

Income Taxes: The Company recorded income tax expense of \$1.4 million, on income before taxes of \$3.6 million for the three months ended June 30, 2013, resulting in an effective tax rate of 39.2%, compared to income tax expense of \$257,000 on income before taxes of \$2.2 million for the same period of 2012, resulting in an effective tax rate of 11.4%. The increase in income tax expense is due to a change in tax treatment for bank owned life insurance ("BOLI") income recorded during the 2012 quarter.

Critical Accounting Policies

In the preparation of our consolidated financial statements, management has adopted various accounting policies that govern the application of accounting principles generally accepted in the United States. The significant accounting policies are described in Note 2 to the Consolidated Financial Statements.

Certain accounting policies involve significant judgments and assumptions by management that have a material impact on the carrying value of certain assets and liabilities. Management considers these accounting policies to be critical accounting policies. The judgments and assumptions used are based on historical experience and other factors, which management believes to be reasonable under the circumstances. Actual results could differ from these judgments and estimates under different conditions, resulting in a change that could have a material impact on the carrying values of assets and liabilities and results of operations.

Allowance for Loan Losses: The allowance for loan losses is considered a critical accounting policy. The allowance for loan losses is the amount estimated by management as necessary to cover losses inherent in the loan portfolio at the balance sheet date. The allowance is established through the provision for loan losses, which is charged to income. Determining the amount of the allowance for loan losses necessarily involves a high degree of judgment.

In evaluating the allowance for loan losses, management considers historical loss factors, the mix of the loan portfolio (types of loans and amounts), geographic and industry concentrations, current national and local economic conditions and other factors related to the collectability of the loan portfolio, including underlying collateral values and estimated future cash flows. All of these estimates are susceptible to significant change. Large groups of smaller balance homogeneous loans, such as residential real estate, home equity loans, and consumer loans, are evaluated in the aggregate under FASB ASC Topic 450, "Accounting for Contingencies", using historical loss factors adjusted for economic conditions and other qualitative factors which include trends in delinquencies, classified and non-performing loans, loan concentrations by loan category and by property type, seasonality of the portfolio, internal and external analysis of credit quality, peer group data, loan charge offs, local and national economic conditions and single and total credit exposure. Large balance and/or more complex loans, such as multi-family and commercial real estate loans, commercial business loans, and construction loans are evaluated individually for impairment in accordance with FASB ASC Topic 310 "Receivables". If a loan is impaired, a portion of the allowance is allocated so that the loan is reported, net, at the present value of estimated future cash flows using the loan's effective interest rate or at the fair value of collateral if repayment is expected solely from the collateral. This evaluation is inherently subjective, as it requires estimates that are susceptible to significant revision as more information becomes available or as projected events change.

Management reviews the level of the allowance monthly. Although management used the best information available to establish the allowance for loan losses, future adjustments to the allowance may be necessary if economic conditions differ substantially from the assumptions used in making the evaluation. In addition, the FDIC and the Department, as an integral part of their examination process, periodically review the allowance for loan losses. Such agencies may require us to recognize adjustments to the allowance based on judgments about information available to them at the time of their examination. A large loss could deplete the allowance and require increased provisions to replenish the allowance, which would adversely affect earnings.

Other Than Temporary Impairment on Investment Securities: Management periodically performs analyses to determine whether there has been an OTTI in the value of one or more securities. The available for sale securities portfolio is carried at estimated fair value, with any unrealized gains or losses, net of taxes, reported as accumulated other comprehensive income or loss in stockholder's equity. The held to maturity securities portfolio, consisting of debt securities for which there is a positive intent and ability to hold to maturity, is carried at amortized cost. Management conducts a quarterly review and evaluation of the securities portfolio to determine if the value of any security has declined below its cost or amortized cost, and whether such decline is other-than-temporary. If such decline is deemed other-than-temporary, the cost basis of the security is adjusted by writing down the security to estimated fair market value through a charge to current period earnings to the extent that such decline is credit related. All other changes in unrealized gains or losses for investment securities available for sale are recorded, net of tax effect, through other comprehensive income.

Income Taxes: Deferred taxes are provided on a liability method whereby deferred tax assets are recognized for deductible temporary differences and operating loss carryforwards and deferred tax liabilities are recognized for taxable temporary differences. Temporary differences are the difference between the reported amounts of assets and liabilities and their tax bases. Deferred tax assets are reduced by a valuation allowance when, in the opinion of management, it is more likely than not that some portion or all of the deferred tax assets will not be realized. Deferred tax assets and liabilities are adjusted for the effects of changes in tax laws and rates on the date of enactment. Realization of deferred tax assets is dependent on generating sufficient taxable income in the future.

When tax returns are filed, it is highly certain that some positions taken would be sustained upon examination by the taxing authorities, while others are subject to uncertainty about the merits of the position taken or the amount of the position that ultimately would be sustained. The benefit of a tax position is recognized in the financial statements in the period during which, based on all available evidence, management believes it is more-likely-than not that the position will be sustained upon examination, including the resolution of appeals or litigation processes, if any. The evaluation of a tax position taken is considered by itself and not offset or aggregated with other positions. Tax positions that meet the more likely-than not recognition threshold are measured as the largest amount of tax benefit that is more than 50 percent likely of being realized upon settlement with the applicable taxing authority. The portion of benefits associated with tax positions taken that exceeds the amount measured as described above is reflected as a liability for unrecognized tax benefits in the accompanying balance sheet along with any associated interest and penalties that would be payable to the taxing authorities upon examination.

Liquidity: Liquidity describes the ability of the Company to meet the financial obligations that arise out of the ordinary course of business. Liquidity addresses the Company's ability to meet deposit withdrawals on demand or at contractual maturity, to repay borrowings as they mature, and to fund current and planned expenditures. Liquidity is derived from increased repayment and income from interest-earning assets. The loan to deposit ratio was 105.7% and 98.8% at June 30, 2013 and December 31, 2012, respectively. Funds received from new and existing depositors provided a large source of liquidity for the six month period ended June 30, 2013. The Company seeks to rely primarily on core deposits from customers to provide stable and cost-effective sources of funding to support loan growth. The Company also seeks to augment such deposits with longer term and higher yielding certificates of deposit. To the extent that retail deposits are not adequate to fund customer loan demand, liquidity needs can be met in the short-term funds market. Longer term funding can be obtained through advances from the FHLB. As of June 30, 2013, the Company maintained lines of credit with the FHLB of \$95.8 million, of which \$20.4 million was outstanding at June 30, 2013.

As of June 30, 2013, the Company's investment securities portfolio included \$12.1 million of mortgage-backed securities that provide cash flow each month. The majority of the investment portfolio is classified as available for sale, is marketable, and is available to meet liquidity needs. The Company's residential real estate portfolio includes loans, which are underwritten to secondary market criteria, and accordingly could be sold in the secondary mortgage market if needed as an additional source of liquidity. The Company's management is not aware of any known trends, demands, commitments or uncertainties that are reasonably likely to result in material changes in liquidity.

Capital: A strong capital position is fundamental to support the continued growth of the Company. The Company and the Bank are subject to various regulatory capital requirements. Regulatory capital is defined in terms of Tier I capital (shareholders' equity as adjusted for unrealized gains or losses on available for sale securities), Tier II capital (which includes a portion of the allowance for loan losses) and total capital (Tier I plus Tier II). Risk-based capital ratios are expressed as a percentage of risk-weighted assets. Risk-weighted assets are determined by assigning various weights to all assets and off-balance sheet associated risk in accordance with regulatory criteria. Regulators have also adopted minimum Tier I leverage ratio standards, which measure the ratio of Tier I capital to total assets.

At June 30, 2013, management believes that the Company and the Bank are "well-capitalized" and in compliance with all applicable regulatory requirements.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Not applicable as the Company is a smaller reporting company.

ITEM 4. CONTROLS AND PROCEDURES

Disclosure Controls and Procedures

Evaluation of disclosure controls and procedures. Based on their evaluation of the Company's disclosure controls and procedures (as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934, (the "Exchange Act")), the Company's principal executive officer and principal financial officer have concluded that as of the end of the period covered by this Quarterly Report on Form 10-Q, such disclosure controls and procedures are effective to ensure that information required to be disclosed by the Company in reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the required time periods specified in the SEC's rules and forms.

Internal Controls

Changes in internal control over financial reporting. During the last quarter, there was no change in the Company's internal control over financial reporting that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.
