DEUTSCHE BANK AKTIENGESELLSCHAFT Form 424B2 October 15, 2014

> Pricing Supplement No. 2235AF Registration Statement No. 333-184193 Filed Pursuant to Rule 424(b)(2)

The information in this preliminary pricing supplement is not complete and may be changed. This preliminary pricing supplement and the accompanying underlying supplement, product supplement, prospectus supplement and prospectus do not constitute an offer to sell nor do they seek an offer to buy these securities in any jurisdiction where the offer or sale is not permitted.

Subject to Completion. Dated October 14, 2014

Deutsche Bank AG

\$
Capped Leveraged Buffered MSCI EAFE® Index-Linked Notes due

The notes do not pay interest or dividends and do not guarantee any return of your investment. The amount that you will be paid on your notes on the stated maturity date (expected to be between 21 and 24 months after the original issue date, subject to adjustment) is based on the performance of the MSCI EAFE® Index (the "Underlier") as measured from the trade date to and including the determination date (expected to be the third scheduled trading day prior to the stated maturity date, subject to adjustment). If the final underlier level on the determination date is greater than the initial underlier level (set on the trade date and may be higher or lower than the actual closing level of the Underlier on the trade date), the return on your notes will be positive, subject to the maximum settlement amount (expected to be between \$1,218.40 and \$1,253.50 for each \$1,000 face amount of notes). If the final underlier level is equal to the initial underlier level or declines by up to 12.50% from the initial underlier level, you will receive the face amount of notes. If the final underlier level declines by more than 12.50% from the initial underlier level, the return on your notes will be negative. In this circumstance, you will lose some or all of your investment in the notes. Any payment on the notes is subject to the credit of the issuer.

To determine your payment at maturity, we will calculate the underlier return, which is the percentage increase or decrease in the final underlier level from the initial underlier level. On the stated maturity date, for each \$1,000 face amount of notes, you will receive an amount in cash equal to:

- •if the underlier return is positive (the final underlier level is greater than the initial underlier level), the sum of (i) \$1,000 plus (ii) the product of (a) \$1,000 times (b) 1.30 times (c) the underlier return, subject to the maximum settlement amount:
- •if the underlier return is zero or negative but not below -12.50% (the final underlier level is equal to or less than the initial underlier level but not by more than 12.50%), \$1,000; or
- •if the underlier return is negative and is below -12.50% (the final underlier level is less than the initial underlier level by more than 12.50%), the sum of (i) \$1,000 plus (ii) the product of (a) \$1,000 times (b) approximately 1.14286 times (c) the sum of the underlier return plus 12.50%. In this circumstance, you will receive less than \$1,000, and you will lose some or all of your investment in the notes.

Your investment in the notes involves certain risks, including, among other things, our credit risk. See "Risk Factors" beginning on page 7 of the accompanying product supplement and "Selected Risk Considerations" beginning on page PS-10 of this pricing supplement.

The Issuer's estimated value of the notes on the trade date is approximately \$963.50 to \$983.50 per \$1,000 face amount of notes, which is less than the original issue price. Please see "Issuer's Estimated Value of the Notes" on page PS-2 of this pricing supplement for additional information.

You should read the additional disclosure provided herein so that you may better understand the terms and risks of your investment.

Original issue date: , 2014 Original issue price: 100.00% of the face amount

Underwriting discount: 0.00% of the face amount Net proceeds to the issuer: 100.00% of the face amount

Deutsche Bank Securities Inc. ("DBSI") will sell all of the notes that it purchases from us to an unaffiliated dealer at the original issue price of 100.00%, or \$1,000 face amount of notes. Such dealer will sell the notes to investors at the same price without a discount or commission. Investors that purchase and hold the notes in fee-based accounts may be charged fees based on the amount of assets held in those accounts, including the notes. For more information see "Supplemental Plan of Distribution (Conflicts of Interest)" in this pricing supplement.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of the notes or passed upon the accuracy or the adequacy of this pricing supplement or the accompanying underlying supplement, product supplement, prospectus supplement and prospectus. Any representation to the contrary is a criminal offense.

The notes are not bank deposits and are not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency.

The original issue price, underwriting discount and net proceeds listed above relate to the notes we sell initially. We may decide to sell additional notes after the date of this pricing supplement, at issue prices and with underwriting discounts and net proceeds that differ from the amounts set forth above. The return (whether positive, zero or negative) on your investment in notes will depend in part on the issue price you pay for such notes.

, 2014

ISSUER'S ESTIMATED VALUE OF THE NOTES

The Issuer's estimated value of the notes is equal to the sum of our valuations of the following two components of the notes: (i) a bond and (ii) an embedded derivative(s). The value of the bond component of the notes is calculated based on the present value of the stream of cash payments associated with a conventional bond with a principal amount equal to the Face Amount of notes, discounted at an internal funding rate, which is determined primarily based on our market-based yield curve, adjusted to account for our funding needs and objectives for the period matching the term of the notes. The internal funding rate is typically lower than the rate we would pay when we issue conventional debt securities on equivalent terms. This difference in funding rate, as well as the agent's commissions, if any, and the estimated cost of hedging our obligations under the notes, reduces the economic terms of the notes to you and is expected to adversely affect the price at which you may be able to sell the notes in any secondary market. The value of the embedded derivative(s) is calculated based on our internal pricing models using relevant parameter inputs such as expected interest rates and mid-market levels of price and volatility of the assets underlying the notes or any futures, options or swaps related to such underlying assets. Our internal pricing models are proprietary and rely in part on certain assumptions about future events, which may prove to be incorrect.

The Issuer's estimated value of the notes on the Trade Date (as disclosed on the cover of this pricing supplement) is less than the Original Issue Price of the notes. The difference between the Original Issue Price and the Issuer's estimated value of the notes on the Trade Date is due to the inclusion in the Original Issue Price of the agent's commissions, if any, and the cost of hedging our obligations under the notes through one or more of our affiliates. Such hedging cost includes our or our affiliates' expected cost of providing such hedge, as well as the profit we or our affiliates expect to realize in consideration for assuming the risks inherent in providing such hedge.

The Issuer's estimated value of the notes on the Trade Date does not represent the price at which we or any of our affiliates would be willing to purchase your notes in the secondary market at any time. Assuming no changes in market conditions or our creditworthiness and other relevant factors, the price, if any, at which we or our affiliates would be willing to purchase the notes from you in secondary market transactions, if at all, would generally be lower than both the Original Issue Price and the Issuer's estimated value of the notes on the Trade Date. Our purchase price, if any, in secondary market transactions will be based on the estimated value of the notes determined by reference to (i) the then-prevailing internal funding rate (adjusted by a spread) or another appropriate measure of our cost of funds and (ii) our pricing models at that time, less a bid spread determined after taking into account the size of the repurchase, the nature of the assets underlying the notes and then-prevailing market conditions. The price we report to financial reporting services and to distributors of our notes for use on customer account statements would generally be determined on the same basis. However, during the period of approximately three months beginning from the Trade Date, we or our affiliates may, in our sole discretion, increase the purchase price determined as described above by an amount equal to the declining differential between the Original Issue Price and the Issuer's estimated value of the notes on the Trade Date, prorated over such period on a straight-line basis, for transactions that are individually and in the aggregate of the expected size for ordinary secondary market repurchases.

SUMMARY INFORMATION

You should read this pricing supplement together with underlying supplement No. 1 dated October 1, 2012, product supplement AF dated September 28, 2012, the prospectus supplement dated September 28, 2012 relating to our Series A global notes of which these notes are a part and the prospectus dated September 28, 2012. You may access these documents on the website of the Securities and Exchange Commission (the "SEC") at.www.sec.gov as follows (or if such address has changed, by reviewing our filings for the relevant date on the SEC website):

- Underlying supplement No. 1 dated October 1, 2012:
 http://www.sec.gov/Archives/edgar/data/1159508/000095010312005120/crt dp33209-424b2.pdf
- Product supplement AF dated September 28, 2012:

- Prospectus supplement dated September 28, 2012: http://www.sec.gov/Archives/edgar/data/1159508/000119312512409437/d414995d424b21.pdf
- Prospectus dated September 28, 2012: http://www.sec.gov/Archives/edgar/data/1159508/000119312512409372/d413728d424b21.pdf

Capitalized terms used but not defined in this pricing supplement have the meanings assigned to them in the accompanying product supplement, prospectus supplement and prospectus. All references to "Buffer Rate," "Cash Settlement Amount," "Determination Date," "Final Underlier Level," "Initial Underlier Level," "Stated Maturity Date," "Underlier Return" and "Upside Participation Rate" in this pricing supplement shall be deemed to refer to "Downside Participation Factor," "Payment at Maturity," "Final Valuation Date," "Final Level," "Initial Level," "Maturity Date," "Underl Return" and "Upside Leverage Factor," respectively, as used in the accompanying product supplement. All references to "Underlier" shall be deemed to refer to "Underlying" or "Index" as used in the accompanying product supplement.

If the terms described in this pricing supplement are inconsistent with those described in the accompanying product supplement, prospectus supplement or prospectus, the terms described in this pricing supplement shall control.

Our Central Index Key, or CIK, on the SEC website is 0001159508. As used in this pricing supplement, "we," "us" or "our" refers to Deutsche Bank AG, including, as the context requires, acting through one of its branches. This pricing supplement, together with the documents listed above, contains the terms of the notes and supersedes all other prior or contemporaneous oral statements as well as any other written materials including preliminary or indicative pricing terms, correspondence, trade ideas, structures for implementation, sample structures, brochures or other educational materials of ours. You should carefully consider, among other things, the matters set forth in this pricing supplement and in "Risk Factors" in the accompanying product supplement, as the notes involve risks not associated with conventional debt securities. We urge you to consult your investment, legal, tax, accounting and other advisers before deciding to invest in the notes.

The trustee has appointed Deutsche Bank Trust Company Americas as its authenticating agent with respect to our Series A global notes.

Deutsche Bank AG has filed a registration statement (including a prospectus) with the Securities and Exchange Commission for the offering to which this pricing supplement relates. Before you invest, you should read the prospectus in that registration statement and the other documents relating to this offering that Deutsche Bank AG has filed with the SEC for more complete information about Deutsche Bank AG and this offering. You may obtain these

documents without cost by visiting EDGAR on the SEC website at.www.sec.gov. Alternatively, Deutsche Bank AG, any agent or any dealer participating in this offering will arrange to send you the prospectus, prospectus supplement, product supplement, underlying supplement and this pricing supplement if you so request by calling toll-free 1-800-311-4409.

You may revoke your offer to purchase the notes at any time prior to the time at which we accept such offer by notifying the applicable agent. We reserve the right to change the terms of, or reject any offer to purchase, the notes prior to their issuance. We will notify you in the event of any changes to the terms of the notes, and you will be asked to accept such changes in connection with your purchase of any notes. You may also choose to reject such changes, in which case we may reject your offer to purchase the notes.

KEY TERMS

Issuer: Deutsche Bank AG, London Branch

Underlier: The MSCI EAFE® Index (Ticker: MXEA)

Specified Currency: U.S. dollars ("\$")

Face Amount: Each note will have a Face Amount of \$1,000; \$ in the aggregate for all the notes; the aggregate Face Amount of notes may be increased if the issuer, at its sole option, decides to sell an additional amount of the notes on a date subsequent to the date of this pricing supplement.

Original Issue Price: 100.00% of the Face Amount

Purchase at amount other than the Face Amount: The amount we will pay you on the Stated Maturity Date for your notes will not be adjusted based on the issue price you pay for your notes, so if you acquire notes at a premium (or discount) to the Face Amount and hold them to the Stated Maturity Date, it could affect your investment in a number of ways. The return on your investment in such notes will be lower (or higher) than it would have been had you purchased the notes at the Face Amount. Also, the Buffer Level would not offer the same measure of protection to your investment as would be the case if you had purchased the notes at the Face Amount. Additionally, the Cap Level would be triggered at a lower (or higher) percentage return than indicated below, relative to your initial investment. See "Selected Risk Considerations — If You Purchase Your Notes at a Premium to the Face Amount, the Return on Your Investment Will Be Lower Than the Return on Notes Purchased at the Face Amount and the Impact of Certain Key Terms of the Notes Will Be Negatively Affected" on page PS-14 of this pricing supplement.

Cash Settlement Amount (on the Stated Maturity Date):

For each \$1,000 Face Amount of notes, we will pay you on the Stated Maturity Date an amount in cash equal to:

- if the Final Underlier Level is greater than or equal to the Cap Level, the Maximum Settlement Amount;
- •if the Final Underlier Level is greater than the Initial Underlier Level but less than the Cap Level, the sum of (i) \$1,000 Face Amount plus (ii) the product of (a) \$1,000 times (b) the Upside Participation Rate times (c) the Underlier Return:
- •if the Final Underlier Level is equal to or less than the Initial Underlier Level but greater than or equal to the Buffer Level, \$1,000; or
- •if the Final Underlier Level is less than the Buffer Level, the sum of (i) \$1,000 plus (ii) the product of (a) \$1,000 times (b) the Buffer Rate times (c) the sum of the Underlier Return and the Buffer Amount.

You will lose some or all of your investment at maturity if the Final Underlier Level is less than the Buffer Level. Any Cash Settlement Amount is subject to the credit of the Issuer.

Initial Underlier Level: To be determined on the Trade Date. The Initial Underlier Level may be higher or lower than the actual Closing Level of the Underlier on the Trade Date; provided that the Initial Underlier Level will not be higher than the highest level of the Underlier on the Trade Date.

Final Underlier Level: The Closing Level of the Underlier on the Determination Date

Underlier Return: The percentage increase or decrease in the Final Underlier Level from the Initial Underlier Level, calculated as follows:

Final Underlier Level – Initial Underlier Level Initial Underlier Level

Upside Participation Rate: 130.00%

Cap Level (to be set on the Trade Date): Expected to be between 116.80% and 119.50% of the Initial Underlier Level

Maximum Settlement Amount (to be set on the Trade Date): Expected to be between \$1,218.40 and \$1,253.50

Buffer Level: 87.50% of the Initial Underlier Level

Buffer Amount: 12.50%

Buffer Rate: The quotient of the Initial Underlier Level divided by the Buffer Level, which equals approximately

114.286%

Trade Date: , 2014

Original Issue Date: Expected to be the fifth scheduled Business Day following the Trade Date

Determination Date (to be set on the Trade Date): A specified date that is expected to be the third scheduled Trading Day prior to the originally scheduled Stated Maturity Date, subject to postponement as described in the accompanying product supplement on page 24 under "Description of Securities — Adjustments to Valuation Dates and Payment Dates."

Stated Maturity Date (to be set on the Trade Date): A specified date that is expected to be between 21 and 24 months after the Original Issue Date, subject to postponement as described in the accompanying product supplement on page 24 under "Description of Securities — Adjustments to Valuation Dates and Payment Dates."

No Interest or Dividends: The notes will not pay interest or dividends.

No Listing: The notes will not be listed on any securities exchange.

No Redemption: The notes will not be subject to any redemption right or price dependent redemption right.

Closing Level: As described under "Description of Securities — Certain Defined Terms" on page 20 of the accompanying product supplement

Business Day: As described under "Description of Securities — Certain Defined Terms" on page 20 of the accompanying product supplement

Trading Day: Notwithstanding the definition for Trading Day provided under "Description of Securities — Certain Defined Terms" on page 22 of the accompanying product supplement, Trading Day means a day, as determined by the Calculation Agent in its sole discretion, on which: (i) the sponsor of the Underlier publishes the closing level of the Underlier and (ii) trading is generally conducted on the Relevant Exchange for the Underlier, notwithstanding any such Relevant Exchange closing prior to its scheduled closing time.

Relevant Exchange: Notwithstanding the definition for Relevant Exchange provided under "Description of Securities — Certain Defined Terms" on page 22 of the accompanying product supplement, Relevant Exchange means each exchange or quotation system where trading has a material effect (as determined by the Calculation Agent) on the overall market for futures or options contracts relating to the Underlier.

Use of Proceeds and Hedging: As described under "Use of Proceeds; Hedging" on page 38 of the accompanying product supplement

Tax Consequences: In the opinion of our special tax counsel, Davis Polk & Wardwell LLP, which is based on prevailing market conditions, it is more likely than not that the notes will be treated for U.S. federal income tax purposes as prepaid financial contracts that are not debt. Generally, if this treatment is respected, (i) you should not recognize taxable income or loss prior to the taxable disposition of your notes (including at maturity) and (ii) the gain or loss on your notes should be capital gain or loss and should be long-term capital gain or loss if you have held the notes for more than one year. The Internal Revenue Service (the "IRS") or a court might not agree with this treatment, however, in which case the timing and character of income or loss on your notes could be materially and adversely affected.

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on various issues regarding the U.S. federal income tax treatment of "prepaid forward contracts" and similar instruments. The notice focuses in particular on whether beneficial owners of these instruments should be required to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; the relevance of factors such as the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. persons should be subject to withholding tax; and whether these instruments are or should be subject to the "constructive ownership" regime, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose a notional interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the notes, possibly with retroactive effect.

You should review carefully the section of the accompanying product supplement entitled "U.S. Federal Income Tax Consequences." The preceding discussion, when read in combination with that section, constitutes the full opinion of our special tax counsel regarding the material U.S. federal income tax consequences of owning and disposing of the notes.

Under current law, the United Kingdom will not impose withholding tax on payments made with respect to the notes.

For a discussion of certain German tax considerations relating to the notes, you should refer to the section in the accompanying prospectus supplement entitled "Taxation by Germany of Non-Resident Holders."

You should consult your tax adviser regarding the U.S. federal tax consequences of an investment in the notes (including possible alternative treatments and the issues presented by the 2007 notice), as well as tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

ERISA: As described under "Benefit Plan Investor Considerations" on page PS-46 of the accompanying prospectus supplement

Supplemental Plan of Distribution: As described under "Supplemental Plan of Distribution (Conflicts of Interest)" on page PS-17 in this pricing supplement and "Underwriting (Conflicts of Interest)" on page 39 of the accompanying product supplement

Calculation Agent: Deutsche Bank AG, London Branch

CUSIP No.: 25152RRR6

ISIN No.: US25152RRR65

Not FDIC Insured: The notes are not bank deposits and are not insured by the Federal Deposit Insurance Corporation (the "FDIC") or any other governmental agency, nor are they obligations of, or guaranteed by, a bank.

HYPOTHETICAL EXAMPLES

The following table and chart are provided for purposes of illustration only. They should not be taken as an indication or prediction of future investment results and are intended merely to illustrate the impact that the various hypothetical Closing Levels of the Underlier on the Determination Date could have on the Cash Settlement Amount, assuming all other variables remain constant.

The examples below are based on a range of Final Underlier Levels that are entirely hypothetical; no one can predict what the level of the Underlier will be on any day throughout the term of the notes, and no one can predict what the Final Underlier Level will be on the Determination Date. The Underlier has been highly volatile in the past — meaning that the level of the Underlier has changed considerably in relatively short periods — and its performance cannot be predicted for any future period.

The information in the following examples reflects hypothetical rates of return on the offered notes assuming that they are purchased on the Trade Date at the Face Amount and held to the Stated Maturity Date. The value of the notes and our purchase price in secondary market transactions after the Trade Date, if any, will vary based on many economic and market factors, including our creditworthiness, and cannot be predicted with accuracy. Any sale prior to the Stated Maturity Date could result in a substantial loss to you.

Key Terms and Assumptions

Face Amount \$1,000

Upside Participation Rate 130.00%

Cap Level 118.15% of the Initial Underlier Level (the midpoint of the range set forth in this pricing supplement)

Maximum Settlement Amount \$1,235.95 (the midpoint of the range set forth in this pricing

supplement)

Buffer Level 87.50% of the Initial Underlier Level

Buffer Rate Approximately 114.286%

Buffer Amount 12.50%

Neither a market disruption event nor a non-Trading Day occurs on the Determination Date No discontinuation of the Underlier or alteration of the method by which the Underlier is calculated Notes purchased on the Original Issue Date at the Face Amount and held to the Stated Maturity Date

Moreover, we have not yet set the Initial Underlier Level that will serve as the baseline for determining the Underlier Return and the amount that we will pay on the notes, if any, at maturity. We will not do so until the Trade Date. As a result, the actual Initial Underlier Level may differ substantially from the level of the Underlier at any time prior to the Trade Date.

For these reasons, the actual performance of the Underlier over the term of the notes, as well as the Cash Settlement Amount, if any, may bear little relation to the hypothetical examples shown below or to the historical levels of the Underlier shown elsewhere in this pricing supplement. For information about the historical levels of the Underlier during recent periods, see "The Underlier — Historical Information" below.

The levels in the left column of the table below represent hypothetical Final Underlier Levels and are expressed as percentages of the Initial Underlier Level. The amounts in the right column represent the hypothetical Cash

Settlement Amount, based on the corresponding hypothetical Final Underlier Level (expressed as a percentage of the Initial Underlier Level), and are expressed as percentages of the Face Amount of notes (rounded to the nearest one-thousandth of a percent). Thus, a hypothetical Cash Settlement Amount of 100.000% means that the value of the cash payment that we would deliver for each \$1,000 of the outstanding Face Amount of notes on the Stated Maturity Date would equal 100.000% of the Face Amount of notes, based on the corresponding hypothetical Final Underlier Level (expressed as a percentage of the Initial Underlier Level) and the assumptions noted above. Please note that the hypothetical examples shown below do not take into account the effects of applicable taxes. The numbers appearing in the table, paragraphs and chart below may have been rounded for ease of analysis.

Hypothetical Final Underlier Level	Hypothetical Cash Settlement Amount
(as Percentage of Initial Underlier Level)	(as Percentage of Face Amount)
200.000%	123.595%
175.000%	123.595%
150.000%	123.595%
125.000%	123.595%
118.150%	123.595%
115.000%	119.500%
110.000%	113.000%
105.000%	106.500%
100.000%	100.000%
90.000%	100.000%
87.500%	100.000%
85.000%	97.143%
75.000%	85.714%
50.000%	57.143%
25.000%	28.571%
0.000%	0.000%

If, for example, the Final Underlier Level were determined to be 25.000% of the Initial Underlier Level, the Cash Settlement Amount would be approximately 28.571% of the Face Amount of notes, as shown in the table above. As a result, if you purchased your notes on the Original Issue Date at the Face Amount and held them to the Stated Maturity Date, you would lose approximately 71.429% of your investment.

If you purchased your notes at a premium to the Face Amount, you would lose a correspondingly higher percentage of your investment.

If the Final Underlier Level were determined to be 150.000% of the Initial Underlier Level, the Cash Settlement Amount would be capped at the Maximum Settlement Amount (expressed as a percentage of the Face Amount), or 123.595% of each \$1,000 Face Amount of notes, as shown in the table above. As a result, if you purchased the notes on the Original Issue Date at the Face Amount and held them to the Stated Maturity Date, you would not benefit from any increase in the Final Underlier Level above the Cap Level of 118.150% of the Initial Underlier Level.

The following chart shows a graphical illustration of the hypothetical Cash Settlement Amount (expressed as a percentage of the Face Amount of notes), if the Final Underlier Level (expressed as a percentage of the Initial Underlier Level) were any of the hypothetical levels shown on the horizontal axis. The chart shows that any hypothetical Final Underlier Level (expressed as a percentage of the Initial Underlier Level) of less than the Buffer Level of 87.500% (the section left of the 87.500% marker on the horizontal axis) would result in a hypothetical Cash Settlement Amount of less than 100.000% of the Face Amount of notes (the section below the 100.000% marker on the vertical axis) and, accordingly, in a loss of principal to the holder of the notes. The chart also shows that any hypothetical Final Underlier Level (expressed as a percentage of the Initial Underlier Level) of greater than 118.150%

(the section right of the Cap Level of 118.150% marker on the horizontal axis) would result in a capped return on your investment.

The Cash Settlement Amounts shown above are entirely hypothetical; they are based on hypothetical Final Underlier Levels, and therefore on hypothetical market prices for the stocks composing the Underlier, that may not be achieved on the Determination Date, and on assumptions that may prove to be erroneous. The actual market value of your notes on the Stated Maturity Date or at any other time, including any time you may wish to sell your notes, may bear little relation to the hypothetical Cash Settlement Amount shown above, and these amounts should not be viewed as an indication of the financial return on an investment in the notes. The hypothetical Cash Settlement Amount in the examples above assume you purchased your notes at their Face Amount and have not been adjusted to reflect the actual issue price you pay for your notes. The return on your investment (whether positive, zero or negative) in your notes will be affected by the amount you pay for your notes. If you purchase your notes for a price other than the Face Amount, the return on your investment will differ from, and may be significantly lower than, the hypothetical returns suggested by the above examples. Please read "Selected Risk Considerations — Many Economic and Market Factors Will Impact the Value of the Notes" in this pricing supplement.

We cannot predict the actual Final Underlier Level or what the market value of the notes will be on any particular Trading Day, nor can we predict the relationship between the level of the Underlier and the market value of your notes at any time prior to the Stated Maturity Date. The actual amount that you will receive, if any, at maturity and the rate of return on the notes will depend on the actual Initial Underlier Level, Cap Level and Maximum Settlement Amount we will set on the Trade Date and the actual Final Underlier Level determined by the Calculation Agent as described above. Moreover, the assumptions on which the hypothetical returns are based may turn out to be inaccurate. Consequently, the amount of cash to be paid in respect of your notes, if any, on the Stated Maturity Date may be very different from the information reflected in the table and chart above.

SELECTED RISK CONSIDERATIONS

An investment in the notes involves significant risks. Investing in the notes is not equivalent to investing directly in the Underlier or any of the stocks composing the Underlier. In addition to these selected risk considerations, you should review the "Risk Factors" section of the accompanying product supplement.

You May Lose Some or All of Your Investment in the Notes

The notes do not pay interest or dividends and do not guarantee any return of your investment. The return on the notes at maturity is linked to the performance of the Underlier and will depend on whether, and the extent to which, the Underlier Return is positive or negative. Your investment will be exposed on a leveraged basis of 1.00% times the Buffer Rate for every 1.00% by which the Final Underlier Level is less than the Initial Underlier Level by an amount greater than the Buffer Amount. If the Final Underlier Level is less than the Initial Underlier Level by an amount greater than the Buffer Amount, you will lose some or all of your investment in the notes.

Your Maximum Payment on the Notes Is Limited to the Maximum Settlement Amount

As a holder of the notes, you will not benefit from any increase in the level of the Underlier beyond the Cap Level. Consequently, your Cash Settlement Amount will be limited to the Maximum Settlement Amount for each \$1,000 Face Amount of notes you hold, regardless of any further increase in the level of the Underlier, which may be significant. Accordingly, the amount payable on your notes may be significantly less than it would have been had you invested directly in the stocks composing the Underlier.

The Stated Maturity Date of the Notes Is a Pricing Term and Will Be Determined by the Issuer on the Trade Date

We will not determine the Stated Maturity Date until the Trade Date, so you will not know the exact term of, or the Determination Date for, the notes at the time that you make your investment decision. The term of the notes could be as short as the shorter end of the Stated Maturity Date range described on PS-5, and as long as the longer end of the Stated Maturity Date range. You should be willing to hold your notes until the latest possible Stated Maturity Date contemplated by the range. The Stated Maturity Date selected by us could have an impact on the value of the notes. Assuming no changes in other economic terms of the notes, the value of the notes would likely be lower if the term of the notes is at the longer end of the Stated Maturity Date range, rather than the shorter end of the Stated Maturity Date range.

No Interest or Dividend Payments or Voting Rights

As a holder of the notes, you will not receive interest payments. As a result, even if the Cash Settlement Amount for your notes exceeds the Face Amount, the overall return you earn on your notes may be less than you would have earned by investing in a non-index-linked debt security of comparable maturity that bears interest at a prevailing market rate. In addition, as a holder of the notes, you will not have voting rights or rights to receive cash dividends or other distributions or other rights that holders of stocks composing the Underlier would have.

The Notes Are Subject to Our Creditworthiness

The notes are senior unsecured obligations of the Issuer, Deutsche Bank AG, and are not, either directly or indirectly, an obligation of any third party. Any payment(s) to be made on the notes depends on the ability of Deutsche Bank AG to satisfy its obligations as they come due. An actual or anticipated downgrade in Deutsche Bank AG's credit rating or

increase in the credit spreads charged by the market for taking our credit risk will likely have an adverse effect on the value of the notes. As a result, the actual and perceived creditworthiness of Deutsche Bank AG will affect the value of the notes and in the event Deutsche Bank AG were to default on its payment obligations, you might not receive any amount(s) owed to you under the terms of the notes and you could lose your entire investment.

The Issuer's Estimated Value of the Notes on the Trade Date Is Less Than the Original Issue Price of the Notes

The Issuer's estimated value of the notes on the Trade Date (as disclosed on the cover of this pricing supplement) is less than the Original Issue Price of the notes. The difference between the Original Issue Price and the Issuer's estimated value of the notes on the Trade Date is due to the inclusion in the Original Issue Price of the agent's commissions, if any, and the cost of hedging our obligations under the notes through one or more of our affiliates. Such hedging cost includes our or our affiliates' expected cost of providing such hedge, as well as the profit we or our affiliates expect to realize in consideration for assuming the risks inherent in providing such hedge. The Issuer's estimated value of the notes is determined by reference to an internal funding rate and our pricing models. The internal funding rate is typically lower than the rate we would pay when we issue conventional debt securities on equivalent terms. This difference in funding rate, as well as the agent's commissions, if any, and the estimated cost of hedging our obligations under the notes, reduces the economic terms of the notes to you and is expected to adversely affect the price at which you may be able to sell the notes in any secondary market. In addition, our internal pricing models are proprietary and rely in part on certain assumptions about future events, which may prove to be incorrect. If at any time a third party dealer were to quote a price to purchase your note or otherwise value your notes, that price or value may differ materially from the estimated value of the notes determined by reference to our internal funding rate and pricing models. This difference is due to, among other things, any difference in funding rates, pricing models or assumptions used by any dealer who may purchase the notes in the secondary market.

The Notes Are Subject to Currency Exchange Rate Risk

Because the Underlier consists of securities denominated in foreign currencies that are converted into U.S. dollars for purposes of calculating the level of the Underlier, holders of the notes will be exposed to currency exchange rate risk with respect to each of the currencies represented in the Underlier. Of particular importance to currency exchange rate risk are:

- existing and expected rates of inflation;
- existing and expected interest rate levels;
 - political, civil or military unrest;
- the balance of payments between the countries represented in the Underlier and the United States; and
- •the extent of governmental surpluses or deficits in the countries represented in the Underlier and the United States.

All of these factors are in turn sensitive to the monetary, fiscal and trade policies pursued by the governments of the countries represented in the Underlier, the United States and other countries important to international trade and finance. An investor's net exposure to currency exchange rate risk will depend on the extent to which the currencies represented in the Underlier strengthen or weaken against the U.S. dollar and the relative weight of each currency represented in the overall Underlier. If, taking into account such weighting, the U.S. dollar strengthens against the component currencies as a whole, the level of the Underlier will be adversely affected and the value of the notes may be reduced. Additionally, the volatility and/or the correlation (including the direction and the extent of such correlation) of the exchange rates between the U.S. dollar and the currencies represented in the Underlier could affect the value of the notes.

There Are Risks Associated with Investments in Notes Linked to the Values of Equity Securities Issued by Non-U.S. Companies

The Underlier includes component stocks that are issued by companies incorporated outside of the U.S. Because the component stocks also trade outside the U.S., the notes are subject to the risks associated with non-U.S. securities markets. Generally, non-U.S. securities markets may be more volatile than U.S. securities markets and market developments may affect non-U.S. securities markets differently

than U.S. securities markets, which may adversely affect the level of the Underlier and the value of your notes. Furthermore, there are risks associated with investments in notes linked to the values of equity securities issued by non-U.S. companies. There is generally less publicly available information about non-U.S. companies than about those U.S. companies that are subject to the reporting requirements of the SEC, and non-U.S. companies are subject to accounting, auditing and financial reporting standards and requirements that differ from those applicable to U.S.-reporting companies. In addition, the prices of equity securities issued by non-U.S. companies may be adversely affected by political, economic, financial and social factors that may be unique to the particular countries in which the non-U.S. companies are incorporated. These factors include the possibility of recent or future changes in a non-U.S. government's economic and fiscal policies (including any direct or indirect intervention to stabilize the economy and/or securities market of the country of such non-U.S. government), the presence, and extent, of cross shareholdings in non-U.S. companies, the possible imposition of, or changes in, currency exchange laws or other non-U.S. laws or restrictions applicable to non-U.S. companies or investments in non-U.S. securities and the possibility of fluctuations in the rate of exchange between currencies. Moreover, certain aspects of a particular non-U.S. economy may differ favorably or unfavorably from the U.S. economy in important respects, such as growth of gross national product, rate of inflation, capital reinvestment, resources and self-sufficiency.

The Underlier Reflects the Price Return of the Stocks Composing the Underlier, Not a Total Return

The return on the notes is based on the performance of the Underlier, which reflects the changes in the market prices of the stocks composing the Underlier. It is not, however, linked to a "total return" version of the Underlier, which, in addition to reflecting those price returns, would also reflect all dividends and other distributions paid on the stocks composing the Underlier. The return on the notes will not include such a total return feature.

Past Performance of the Underlier or Component Stocks of the Underlier Is No Guide to Future Performance

The actual performance of the Underlier or component stocks of the Underlier over the term of the notes, as well as any amount payable on the notes, may bear little relation to the historical closing levels of the Underlier or the historical closing prices of the component stocks of the Underlier, and may bear little relation to the hypothetical return examples set forth elsewhere in this pricing supplement. We cannot predict the future performance of the Underlier or component stocks of the Underlier or whether the performance of the Underlier will result in the return of any of your investment.

Assuming No Changes in Market Conditions and Other Relevant Factors, the Price You May Receive for Your Notes in Secondary Market Transactions Would Generally Be Lower Than Both the Original Issue Price and the Issuer's Estimated Value of the Securities on the Trade Date

While the payment(s) on the notes described in this pricing supplement is based on the full Face Amount of notes, the Issuer's estimated value of the notes on the Trade Date (as disclosed on the cover of this pricing supplement) is less than the Original Issue Price of the notes. The Issuer's estimated value of the notes on the Trade Date does not represent the price at which we or any of our affiliates would be willing to purchase your notes in the secondary market at any time. Assuming no changes in market conditions or our creditworthiness and other relevant factors, the price, if any, at which we or our affiliates would be willing to purchase the notes from you in secondary market transactions, if at all, would generally be lower than both the Original Issue Price and the Issuer's estimated value of the notes on the Trade Date. Our purchase price, if any, in secondary market transactions would be based on the estimated value of the notes determined by reference to (i) the then-prevailing internal funding rate (adjusted by a spread) or another appropriate measure of our cost of funds and (ii) our pricing models at that time, less a bid spread determined after taking into account the size of the repurchase, the nature of the assets underlying the notes and then-prevailing market conditions. The price we report to financial reporting services and to distributors of our notes

for use on customer account statements would generally be determined on the same basis. However, during the period of approximately three months beginning from the Trade Date, we or our affiliates may, in our sole discretion, increase the purchase price determined as described above by an amount equal to the declining differential between the Original Issue Price and the Issuer's estimated value of the notes on the Trade Date, prorated over such period on a straight-line basis, for transactions that are individually and in the aggregate of the expected size for ordinary secondary market repurchases.
