The share prices set forth in the table will be adjusted as of any date on which the Conversion Rate of the Series D Preferred Shares is adjusted by multiplying the applicable price in effect immediately before the adjustment by a fraction:

- whose numerator is the Conversion Rate immediately before the adjustment; and
- whose denominator is the adjusted Conversion Rate

In addition, RPT will adjust the number of additional shares in the table at the same time, in the same manner in which, and for the same events for which, RPT must adjust the Conversion Rate as described in the Preliminary Prospectus Supplement under Description of the Preferred Shares Conversion Rate Adjustment.

The exact share price and fundamental change effective date may not be set forth on the table, in which case: if the share price is between two share prices on the table or the fundamental change effective date is between two fundamental change effective dates on the table, the make-whole premium will be determined by straight-line interpolation between make-whole premium amounts set forth for the higher and lower share prices and the two fundamental change effective dates, as applicable, based on a 365-day year;

if the share price is in excess of \$50.00 per share (subject to adjustment in the same manner as the share price) no make-whole premium will be paid; and

if the share price is less than \$12.53 per share (subject to adjustment in the same manner as the share price), no make-whole premium will be paid.

However, the Conversion Rate will not be adjusted as described above to the extent the increase will cause the Conversion Rate to exceed 3.9904. RPT also will adjust this maximum Conversion Rate in the same manner in which, and for the same events for which, it must adjust the Conversion Rate as described in the Preliminary Prospectus Supplement.
